Civil War soldiers and Wild West frontiersmen sought out the legendary Henry rifle because of its superior firepower. Today, sportsmen like you purchase Henrys because they are magnificently styled, have the smoothest actions, perform with flawless reliability and bear the great legendary name of Henry. And don't overlook the fact that they are surprisingly affordable with features other manufacturers charge twice the price for.

Every part that goes into a Henry is made in America by American workers. Decent, hard-working folks just like you who take pride in their work. We are a family owned business and we stand behind every rifle that leaves our plant. You'll find our customer service second to none, and we will do everything we must to guarantee your complete satisfaction.

The first Americans embraced Henrys 150 years ago to engage in battle. You'll love them today because they're just plain fun to shoot.

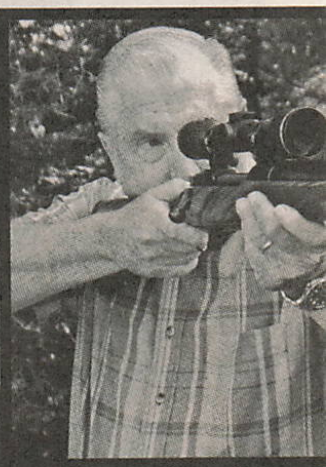
GUN TEST

RUGER M77 MARK II MAGNUM .375 H&H MAG

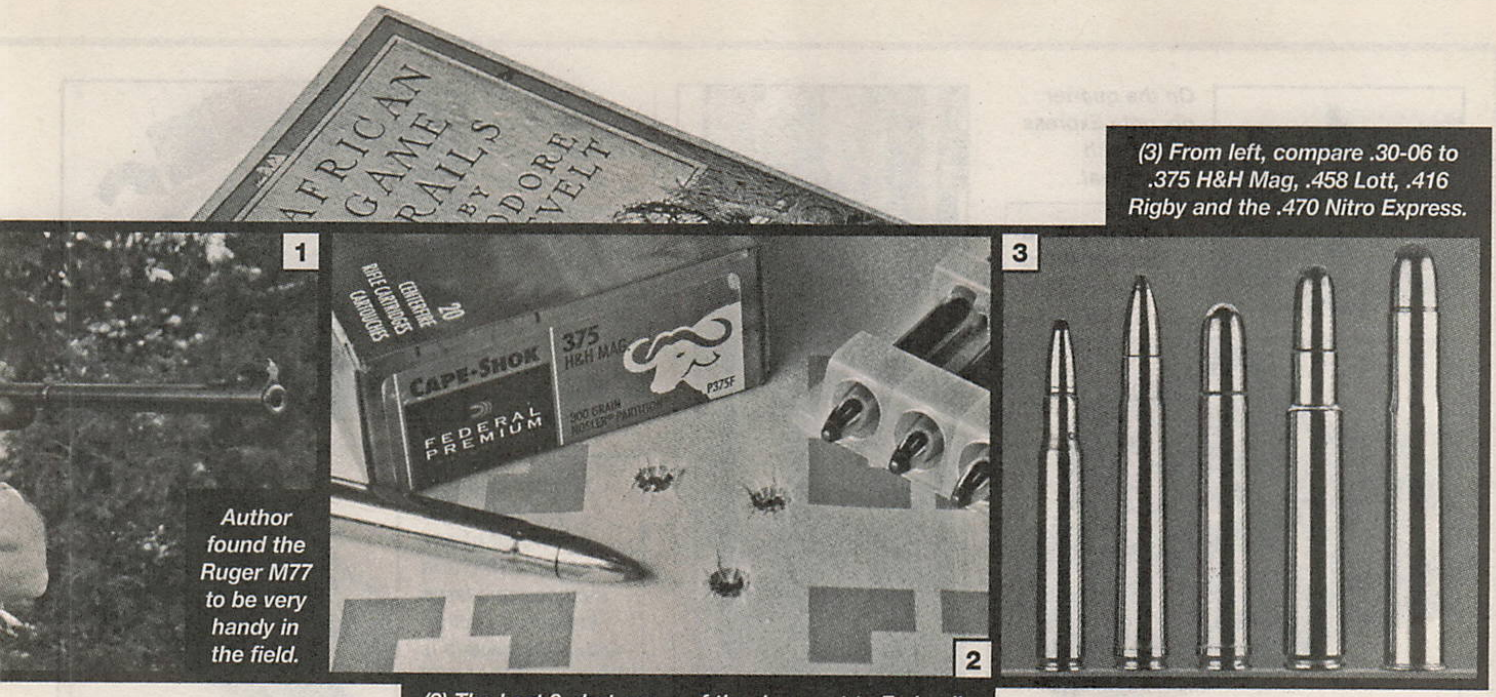


For big-game hunting or just for pride of ownership, it's a rifle of a lifetime!

By Stan Trzoniec

Looking back at all his many guns, it's obvious Bill Ruger had his favorites. And then there were those guns that he kept on the back burner. Consider the single shot rifle that became the Ruger No. 1. Taking its cue from older Farquharson designs, Ruger started with that classic, worked it over, slimmed it down and offered it in so many cartridges, barrel lengths and stock configurations that it was a success even before it hit the gun shops. The other favorite Ruger gun, the Magnum rifle, is a variation of the famous safari guns that proved themselves on the plains of Africa.

Knowing the thoughts of Ruger, the gun had to be made in two different models to include less robust cartridges for North American game. This model was called the Express and was chambered for .270 and .30-06. Boasting all the spit



1

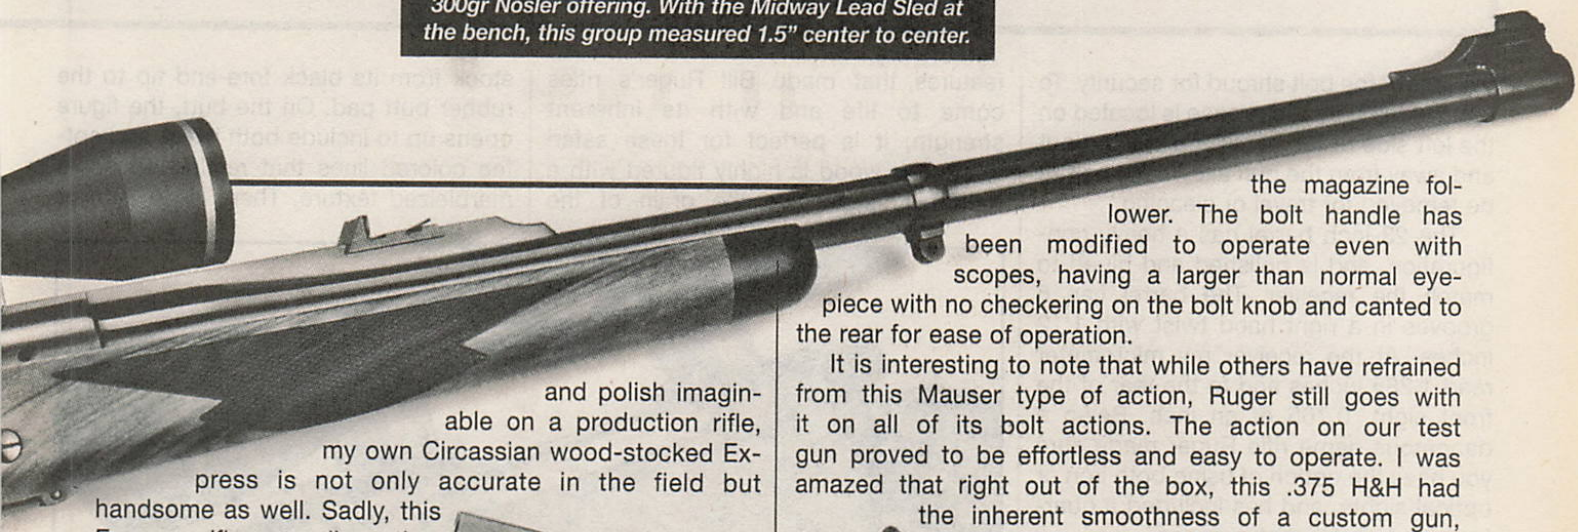
Author found the Ruger M77 to be very handy in the field.

2

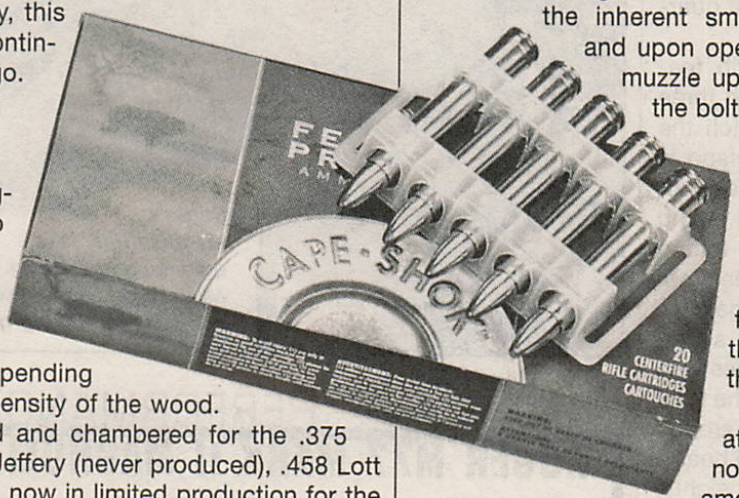
(2) The best 3-shot group of the day went to Federal's 300gr Nosler offering. With the Midway Lead Sled at the bench, this group measured 1.5" center to center.

3

(3) From left, compare .30-06 to .375 H&H Mag, .458 Lott, .416 Rigby and the .470 Nitro Express.



and polish imaginable on a production rifle, my own Circassian wood-stocked Express is not only accurate in the field but handsome as well. Sadly, this Express rifle was discontinued a few short years ago.



Gun Details

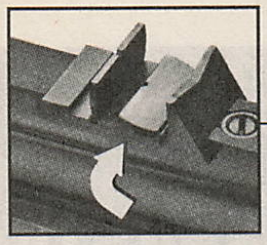
However, it's the Magnum rifle that seems to garner the most attention in this series of big-bore rifles. It's a big gun, checking in at around 10 pounds, depending upon the cartridge and density of the wood. Initially it was advertised and chambered for the .375 Holland & Holland, .404 Jeffery (never produced), .458 Lott and .416 Rigby. The gun, now in limited production for the better part of 20 years, is now available in the ever-popular .375 H&H Magnum (our test gun), .416 Rigby and .458 Lott.

The action is built on Ruger's magnum action. It measures only 0.44 of an inch longer than present day .30-06 M77 Mark II actions. In width, the receiver measures 1.45 inches across at its widest point and houses a bolt 8 inches long. The bolt is a version of the trusted Mauser design and features a long extractor on its flank and a mechanical ejector deep down and to the rear of the receiver behind the magazine follower. The bolt handle has been modified to operate even with scopes, having a larger than normal eyepiece with no checkering on the bolt knob and canted to the rear for ease of operation.

It is interesting to note that while others have refrained from this Mauser type of action, Ruger still goes with it on all of its bolt actions. The action on our test gun proved to be effortless and easy to operate. I was amazed that right out of the box, this .375 H&H had the inherent smoothness of a custom gun, and upon opening the gun and tipping the muzzle up at about a 45-degree angle, the bolt fell freely to the rear.

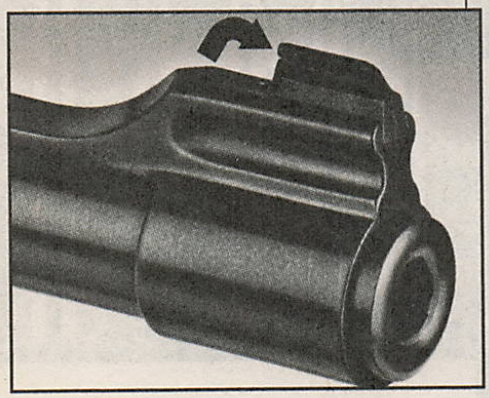
Magazine capacity is 4 rounds, while with larger diameter cases, it's limited to three. Inside, the magazine follower is stainless with all of the bottom metal machined from solid steel. The release for the floorplate is on the front of the triggerguard.

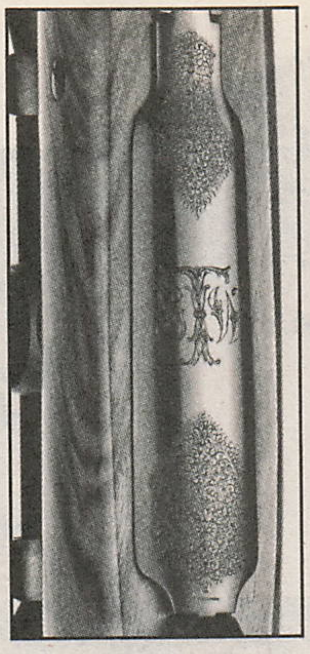
The trigger on my gun broke at less than 5 pounds. It is non-adjustable, which limits the amount of tinkering one can do with this gun, but on the other hand, for hunting large game, lighter pulls are not needed or desired. Since this is the M77 Mark II version of the Magnum Rifles, the safety is 3-position and rests behind the bolt handle for right-handed shooters. Set all the way forward, the safety allows the gun to fire. In the mid-position, the sear is locked but the bolt can be moved to load or unload the gun or change loads, and all the way to the rear locks both the sear and bolt with a neatly designed wedge that fits into a notch at



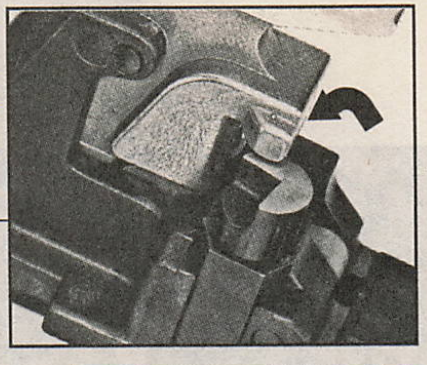
On the quarter rib, note Express sights with folding leaf.

The front has a custom styled sight with a gold bead.



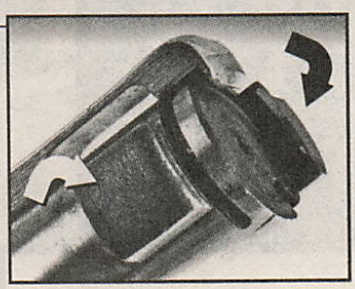


With the safety on, a block pivots into place securing the sear and bolt in place.



Note the engraved. floorplate has author's initials.

Mauser inspired, the bolt is the longest of any Ruger rifle and includes this large extractor. Lockup within the breech is accomplished with twin locking lugs.



the rear of the bolt shroud for security. To remove the bolt, the release is located on the left side of the receiver. Pulling it out and away from the gun allows the bolt to be removed for travel or cleaning.

The 23-inch barrel has a heavy configuration, and is polished and blued to match the receiver. The barrel has 6 grooves in a right hand twist with 1:12 inches. At the receiver my micrometer read 1.285 inches and to the rear of the front sight, 0.765 of an inch. Being a dangerous game rifle Ruger made sure you have the option of using both iron or optical sights, and has included a quarter or top rib for that purpose.

This matte finished quarter rib features V-notch express sights with three blades at various heights to match the loads you are using. The rear blade is part of the assembly and does not move; however, the two forward sitting blades can be regulated and folded down when not in use. The whole sight assembly is adjustable for windage only. Personally, I'd go for optical sights before shooting at longer distances with a V-notch iron sighted weapon. The front sight is very handsome, it wraps around the barrel and comes with a gold bead.

My preference is for optical sights, so I mounted a Leupold LPS scope in Ruger rings. The Magnum Rifle comes with 1-inch scope rings that attached handily to the quarter rib. As the Leupold is 30mm in diameter, I called Ruger and within days the medium rings were at my door.

Being a big-ticket item, the stock reflects the $2,200 price tag. Profiled from top-grade walnut, it has the same features that made Bill Ruger's rifles come to life and with its inherent strength, it is perfect for these safari rifles. The wood is highly figured with a pattern that follows the grain of the stock from its black fore-end tip to the rubber butt pad. On the butt, the figure opens up to include both black and coffee colored lines that remind one of a marbleized texture. There is no high or

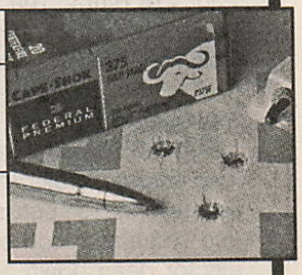
Ruger's Magnum Rifle is quite a handsome rig. Mounting a Leupold scope it's good company for the big-game hunter.

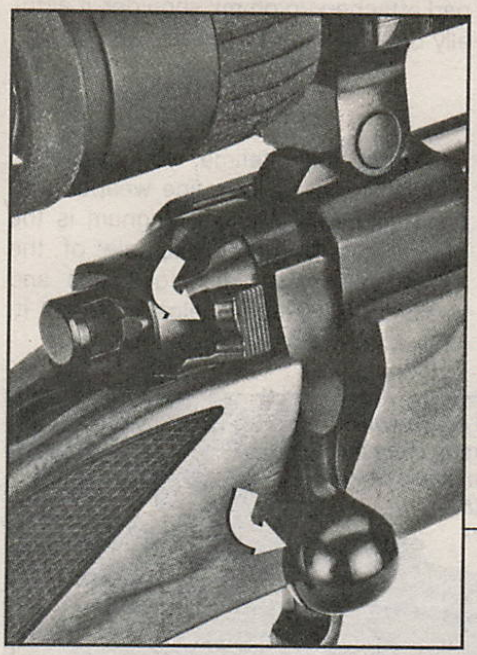
PERFORMANCE

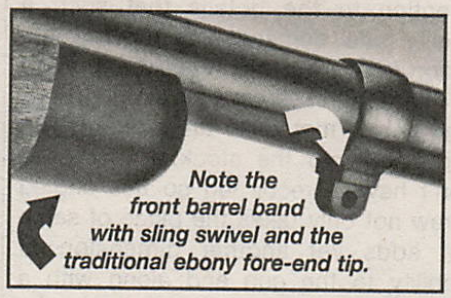
RUGER M77 MARK II MAGNUM .375 H&H MAG

Load	Velocity	Accuracy
Hornady 270 Soft Point	2875	1.75
Remington 270 Soft Point	2685	2.00
Federal 300 Nosler	2523	1.50

Bullet weight measured in grains, velocity in feet per second (fps) by Shooting Chrony chronograph, and accuracy in inches for 3-shot groups from bench with a Midway Lead Sled at 100 yards.

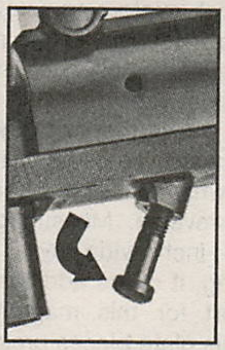






Note the front barrel band with sling swivel and the traditional ebony fore-end tip.

Note the slight backward angle of the bolt handle and the safety lever mounted to the rear of the bolt stem and stock notch.



Ruger's front stock screw is angled to pull the stock down and into the stock.

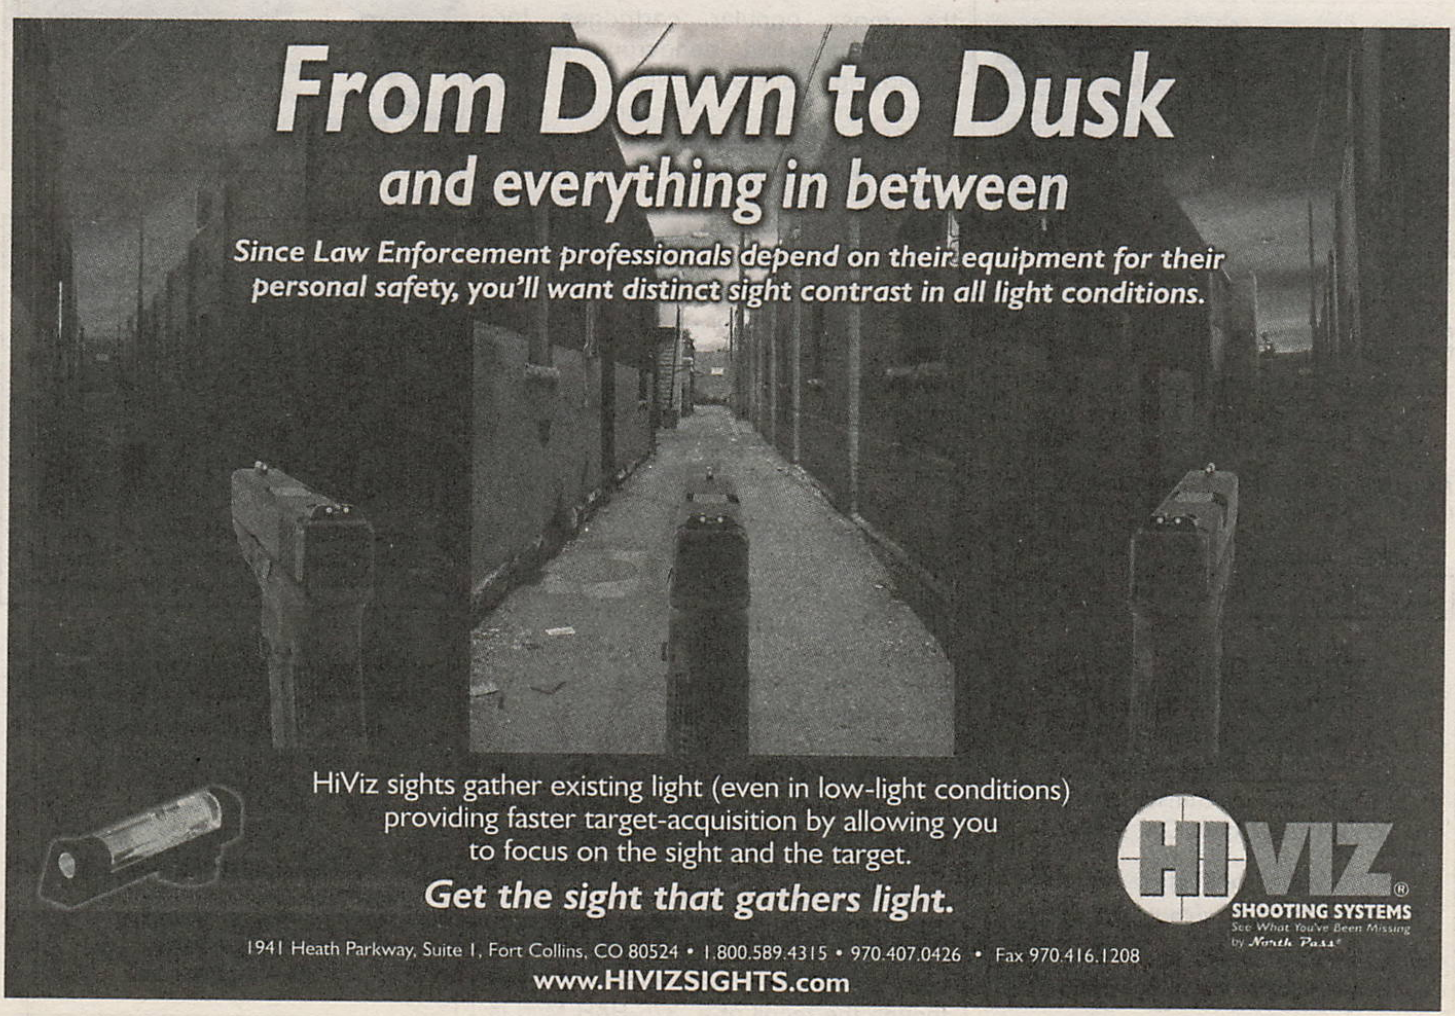
Capacity: 3/4 .375 H&H Mag • **Price:*** $2,200
(* Manufacturer's Suggested Retail Price)

monte-carlo type of comb. Instead, this part of the stock follows the classic school of stock design to the letter. On the left side, there is no cheekpiece and when a scope is installed I never miss it, since as my eye goes directly to the center of the reticle.

The stock has an oil-type polyurethane weather-resistant finish that's very smooth to the touch and absent of any dust specks or ripples that might spoil the looks of this rifle. The checkering is hand cut in a traditional point pattern with more than ample coverage about the forearm and the pistol grip. To make the stock even more classic, an ebony fore-end tip has been included and cut at a 90-degree angle followed by a stylized grip cap with the Ruger logo dead center. There is a black rubber recoil pad on the butt. Finally, a sling swivel stud is attached at the toe of the stock along with a classy stud in the barrel band forward of the fore-end tip.



From Dawn to Dusk
and everything in between
Since Law Enforcement professionals depend on their equipment for their personal safety, you'll want distinct sight contrast in all light conditions.
HiViz sights gather existing light (even in low-light conditions) providing faster target-acquisition by allowing you to focus on the sight and the target.

Inside the stock, you'll find the attention to the details that such a quality rifle demands. Separating the action from the stock reveals a number of things. First, there's an angled bedding screw that pulls the action down and back into the stock. Ruger rifles don't have a recoil lug so this angled screw not only takes the place of same but adds yet another dimension of stability to the gun and along with a stock reinforcing screw that pierces the stock forward of the magazine helps to prevent splitting of this high grade wood.

Within the stock itself and forward of the magazine there is what looks like a quarter rib in reverse. Measuring about an inch wide by 7 inches long, it offers additional support for this magnum rifle. This plate places pressure on the underside of the barrel, which in turn drives both parts down into a mortise deep within the wood to act as a full-length bedding plate.

Done in a conservative point pattern, there is more than ample checkering on the forearm of the rifle.

Shooting Impressions

The proven .375 H&H Mag is one of the most popular cartridges for hunting big and dangerous game. Employing bullets as light as 220 grains and up to 300 grains, this cartridge is formidable medicine for the largest North American or African game, and it's become a favorite for elk.

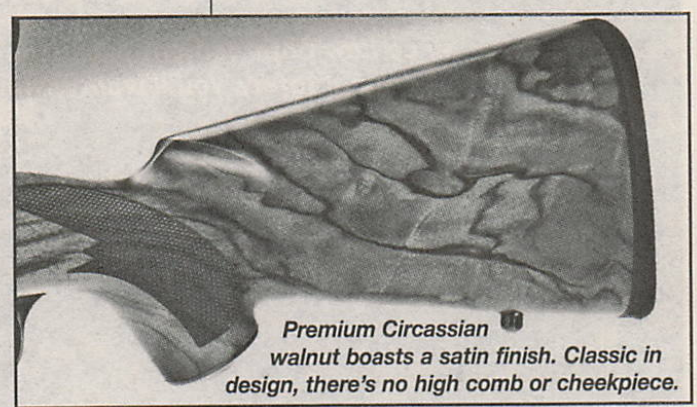
The .375 H&H cartridge is available either handloaded or from the factory. With handloading, this cartridge can be adjusted for excellent results downrange. It is also useful somewhat downloaded to lower velocities for small game like deer. The Speer manual lists a range of loads and I've found them to be right on the money, accurate and easy on the shoulder.

Full house factory loads from Federal, Hornady and Remington proved their mettle at 100 yards with casual groups registering under 2 inches. In any event, shooting from the bench with a Midway Lead Sled was the way to go for me as it curbed recoil to that of a .30-06 cartridge. Shooting off-hand allowed the body to roll with the punch and even though the recoil of a .375 H&H Mag is stout, after a few rounds with the PAST pad attached up on my shoulder, it actually becomes fun to shoot.

Final Notes

During your lifetime, you owe it to yourself to invest in a fine weapon and the Ruger M77 Mark II Magnum is the gun. It is a great example of the American way of building a rifle and besides, Bill Ruger helped design it. Now what more can any hunter ask.

The Magnum Rifle has an abundance of quality checkering on the pistol grip.



Premium Circassian walnut boasts a satin finish. Classic in design, there's no high comb or cheekpiece.

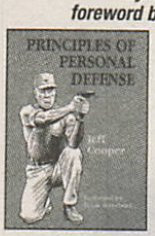
THE SOURCE . . .

PRINCIPLES OF PERSONAL DEFENSE
Revised and Updated Edition
by Jeff Cooper;
foreword by Louis Awerbuck



This new edition of Cooper's classic book on defensive mental conditioning with a tribute by firearms expert Louis Awerbuck and new drawings by renowned illustrator Paul Kirchner. Presenting Cooper's timeless theory of individual defensive behavior, it deserves a place of honor in every library. 5 1/2 x 8 1/2, softcover, illus., 80 pp. **#PPD.2** **$14.00**

THE ART OF THE RIFLE
Special Color Edition
by Jeff Cooper

"Riflecraft has been completely ignored since World War II," says Jeff Cooper, America's foremost rifle instructor. In this deluxe color edition, Cooper includes a new intro and chapter on the Scout, as well as updating you on everything you need to know about shooting the rifle, while entertaining you with tales of marksmanship, combat and big-game hunting. This is a book you'll treasure forever. 5 1/2 x 8 1/2, hardcover, photos, 224 pp. **#ART.R2** **$44.95**

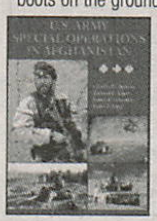
KILL OR GET KILLED
1943 Edition
by Maj. Rex Applegate

Kill or Get Killed is considered one of the most influential books on close-quarters combat ever published, but few readers have had the opportunity to study the rare original 1943 edition published during World War II. Now, serious students of the evolution of modern battlefield skills have a source for this combat classic – Paladin Press. 5 1/2 x 8 1/2, softcover, photos, 186 pp. **#KOGK.43** **$20.00**

HIT OR MYTH, REVISED AND UPDATED
An Analysis of Target Systems for Practical Training in Defensive Shooting
by Louis Awerbuck

When ***Hit or Myth*** was published in 1990, it was a breakthrough in practical firearms training. In this updated edition, Awerbuck teaches the latest techniques, equipment and drills for using moving targets, defining vital zones on targets, training for low-light encounters and more. 5 1/2 x 8 1/2, softcover, photos, 84 pp. **#MYTH2** **$14.00**

U.S. ARMY SPECIAL OPERATIONS IN AFGHANISTAN
by Charles H. Briscoe, Richard L. Kiper, James A. Schroder, and Kalev I. Sepp



This remarkable combat history chronicles the "boots on the ground" actions by U.S. Army Special Operations Command (USASOC) from Sept. 11, 2001, until May 15, 2002. Read how Green Berets, Rangers and other Spec-Ops soldiers performed valiantly in the rugged conditions of remote Afghanistan. 8 1/2 x 11, softcover, photos, illus., 442 pp. **#SOAFG** **$40.00**

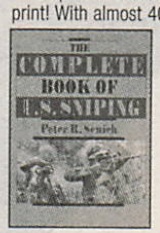
ALL ROADS LEAD TO BAGHDAD
Army Special Operations Forces in Iraq

This book gives a vivid picture of Operation Iraqi Freedom from March to July 2003, complete with firsthand combat accounts from the soldiers doing the fighting. To ensure accuracy, the authors (U.S. Army Special Operations Command historians) received unparalleled access to classified documents and accounts from the troops. Now available to the public for the first time. 6 x 9, softcover, color photos, illus. & maps. 552 pp. **#ROADS** **$45.00**

LIVING WITH THE AR-15
The Complete Guide to the World's Most Versatile Rifle for Civilians
by Robert H. Boatman

The AR-15 is the ideal general-purpose rifle – easily configured for home and community defense, disaster survival, small- and big-game hunting, pest control, subsistence hunting and target shooting. It's an easy gun to handle and shoot, perfect for less-experienced women and children, with advanced capabilities to satisfy the most expert rifleman. 8 1/2 x 11, softcover, photos, 88 pp. **#LAR15** **$15.00**

THE COMPLETE BOOK OF U.S. SNIPING
by Peter R. Senich



One of the most important histories of the development of U.S. military sniping is back in print! With almost 400 photos, this comprehensive volume documents the chronological development of the U.S. Army and Marine Corps sniper arms from the Civil War era through Vietnam, where first-class sniper training clearly demonstrated the value of precision marksmanship. 8 1/2 x 11, softcover, photos, illus., 288 pp. **#US.2** **$45.00**

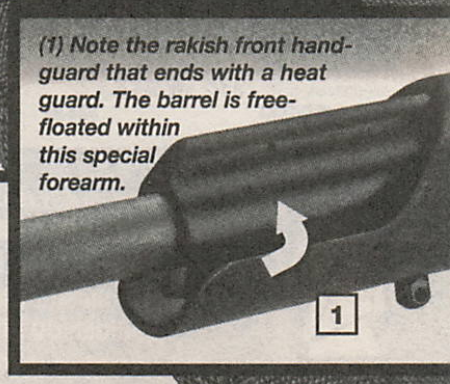
SMITH & WESSON M&P15PC 5.56mm

Performance Center masterpiece is a sharpshooter for all occasions!

The author found the Smith & Wesson M&P15PC easy handling and quick on target.



(1) Note the rakish front handguard that ends with a heat guard. The barrel is free-floated within this special forearm.

1

For a super-versatile carbine, it's hard to beat an AR-15. Mounting a variety of optics, lasers and lights, the AR-15 has proven itself in all kinds of weather and terrain. No nonsense in design, they function when the chips are down and, chambered for the 5.56mm NATO (.223) cartridge, makes them handy and available in just about any part of the world. One of the newest AR-15s, Smith & Wesson has just introduced their M&P15PC.

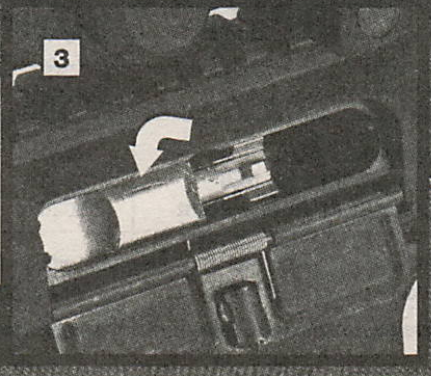
Gun Details

The standard bearer, the M&P15, includes many familiar AR-15 features. The 16-inch barrel has a 15-inch sight radius and adjustable dual aperture sight. There is a carry handle, heat-resistant forearm and collapsible stock. The M&P15A has a top Picatinny style mounting system and an adjustable folding rear sight. With fine touches from the famous Smith & Wesson Performance Center the gun took on a new look with a

New Smith & Wesson M&P15PC with its carrying case and Burris Euro Diamond 3x10-40mm scope in Leupold rings.

By Stan Trzoniec

(2) The barrel is 20" long and is made from stainless steel.



(3) The bolt is skeletonized and hard chromed for durability.

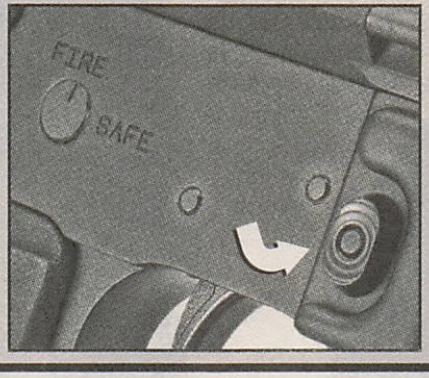
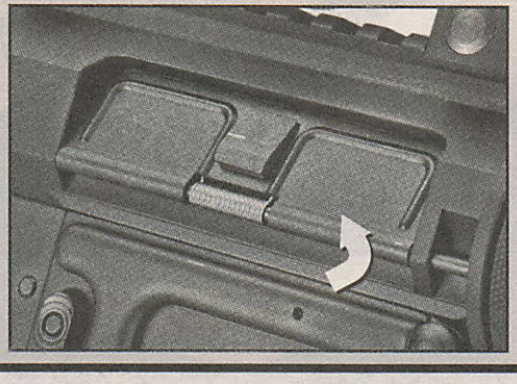
The 10-shot mag fits almost flush with the mag well.

The receiver has been machined into a special design reserved for the M&P15PC only.

The mag release is located just forward of the trigger and triggerguard.



The dust cover is standard and protects from dirt and debris.



squared-up receiver, a longer barrel and a rigid stock.

When you take delivery of your new Performance Center rifle, it comes in a handsome, black, soft-lined case with side pockets for magazines and a zippered accessory pouch. With attached handles, it's good protection for the transport of your new rifle.

The gun is streamlined and looks like a match grade rifle should. From the barrel to the rubber butt pad, the gun features an almost straight-line design, keeping recoil negligible, to allow the shooter's eye to stay on the scope. Length of pull is the standard 13.5 inches and there's no drop at the comb. The pistol grip has an arched backstrap and finger grooves.

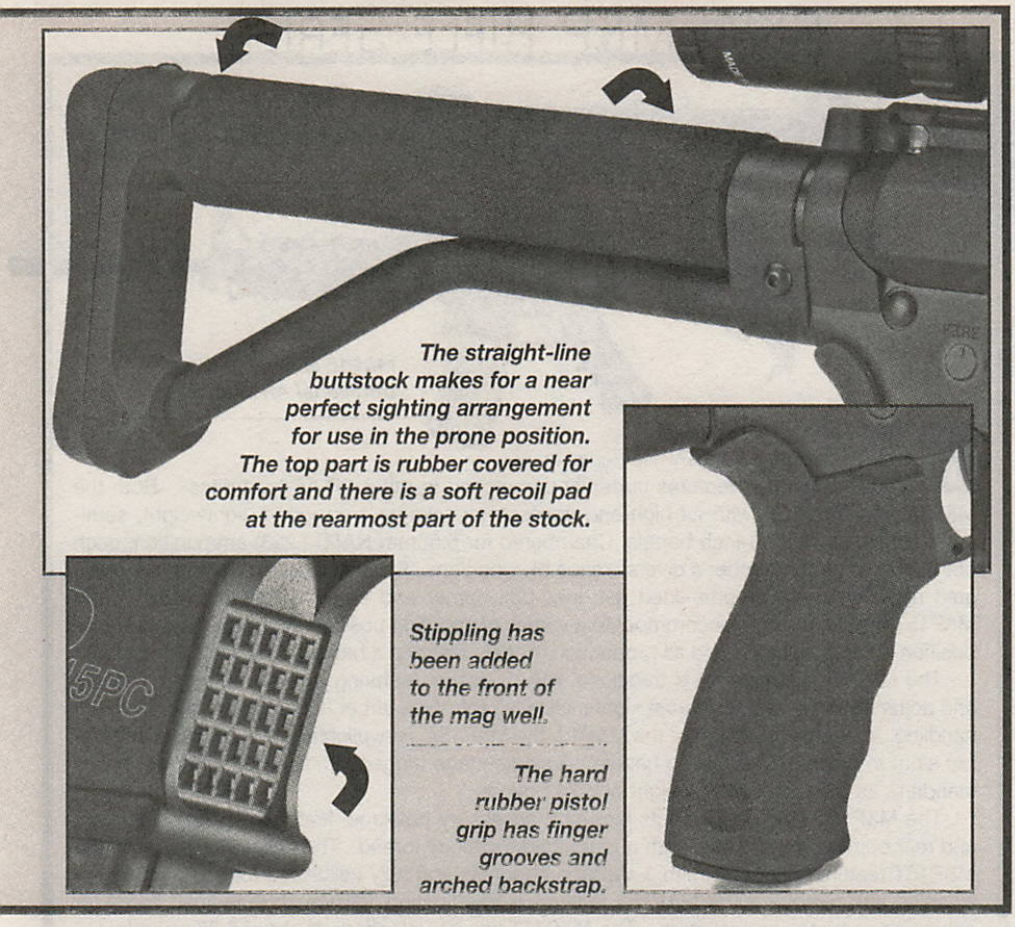
One special feature is the rakish handguard. Made from metal, it runs almost the full length of the gun's 20-inch barrel. There is no checkering or roughness on this part of the gun, but the hard coating of black anodizing makes a perfect grip when firing. It is cut back near the muzzle but still is within the bounds of the forearm. A smaller amount of metal protection has been added to lessen the chance of grabbing a hot barrel.

The Lothar-Walther heavy contour barrel is free-floated within the fore-end, and has a rate of twist of 1-in-8 inches. It's stainless steel with a non-reflective matte finish. The bolt carrier is skeletonized for light weight, and both the upper and lower receiver is constructed from an aluminum billet.

PERFORMANCE
SMITH & WESSON M&P15PC 5.56MM

Load	Velocity	Accuracy
Hornady 55 V-Max	3240	1.00
Remington 50 Boat Tail	3300	0.75
Winchester 60 Power Point	3020	1.25

Bullet weight measured in grains, velocity in feet per second (fps) by Shooting Chrony chronograph, and accuracy in inches for 3-shot groups from benchrest at 100 yards.



The straight-line buttstock makes for a near perfect sighting arrangement for use in the prone position. The top part is rubber covered for comfort and there is a soft recoil pad at the rearmost part of the stock.

Stippling has been added to the front of the mag well.

The hard rubber pistol grip has finger grooves and arched backstrap.

In contrast to the standard M&P15, the Performance Center model comes without sights but with a Picatinny styled accessory rail for scope mounting. To test this gun, I mounted a Burris Euro Diamond 3x10-40mm scope in Leupold rings that complemented the finish of the gun perfectly. I used the low ring set, but later at the range I realized that I would be more comfortable with medium or even high rings attached.

Operator controls are standard fare and go with other guns of similar design. There is the customary charging handle that places a round in the chamber by

pulling it to the rear and letting it go forward by releasing the bolt catch, but there is no bolt assist.

The magazine release is located on the right-hand side and within easy reach of the trigger finger to expedite the reloading of the weapon by releasing the empty magazine. The safety lever is on the left side and operates much like that of a 1911 handgun. With the safety lever in the horizontal position, one flick of the thumb downward will place the gun in the fire position. The trigger on this M&P15PC is of match quality, which simply means it is two-stage in operation and breaks clean at a lower trigger pull than most guns of the same type.

Overall quality of the gun more than measures up to the Performance Center standards and all parts and components are finished to exacting standards. All metalwork is clean from any burrs, tooling or machining marks and the anodizing is spotless and free from airborne defects. The magazine that came with the gun has a 10-shot capacity and ejects from the gun cleanly.

Disassembly of the gun for routine maintenance follows suit with other guns of the S&W M&P series. Start by removing the take-down pin from above and slightly behind the trigger. For better access to the internal parts, remove the pivot screw from the front of the receiver, and then rotate the lower receiver away from the upper part of the gun. Pull the charging handle to the rear, and remove the bolt carrier assembly. For more detailed cleaning and full explanation of field stripping the weapon down, consult the well-illustrated instruction manual supplied with the gun.

S&W M&P Rifle Series

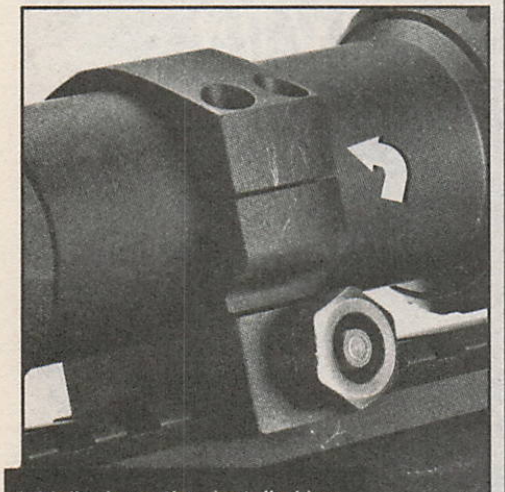
M&P15T with its high-end accessory package.

M&P15 is done in the traditional AR15 style.

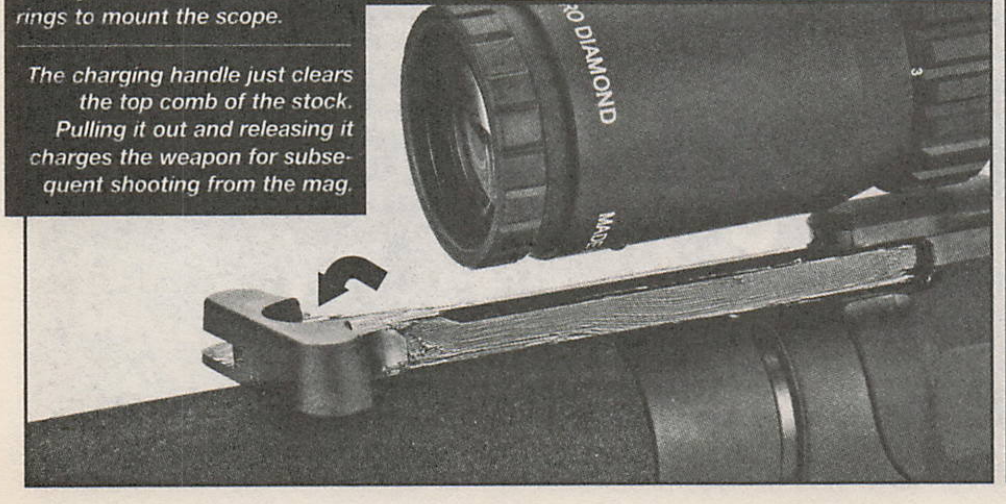
Based upon a combat-proven design, the M&P Rifle Series incorporates standard features currently unmatched in other AR-15-type rifles. Both the M&P15 and M&P15T (with its high-end accessory package) are rugged, lightweight, semi-automatic rifles with 16-inch barrels. Chambered for 5.56mm NATO (.223) ammunition, each rifle is built to perform under a diverse range of conditions. Reliability features of the gas-operated rifles include a chrome-lined gas key, bolt carrier and barrel. Both the M&P15 and M&P15T are designed to accommodate a variety of shooting positions through the use of a 6-position adjustable stock and all production models features a barrel twist of 1 in 9 inches.

The M&P15 incorporates a traditional AR-15 design featuring a removable carry-handle and adjustable rear and front post sights, allowing for quick target acquisition and convenient handling. An identical version of the M&P15, the M&P15A, is available with a folding rear combat sight in place of the flat-top handle. A single-stage trigger with a 7-pound trigger pull is standard, as is the unloaded weight of 6.74 pounds

The M&P15T (Tactical), with its high-end accessory package, features flip-up/down front and rear combat sights along with a four sided Picatinny forend. The front rail system on the M&P15T features custom Smith & Wesson handrails and fully calibrated for easy accessory insertion and removal. The M&P15T features a free floating 16-inch chrome-lined barrel for enhanced accuracy and reliability. The M&P15T has an unloaded weight of 6.85 pounds.



Initially the author installed low rings to mount the scope.



The charging handle just clears the top comb of the stock. Pulling it out and releasing it charges the weapon for subsequent shooting from the mag.

Range Time

At the range, the gun performed without a hitch. For durability, the gas key and bolt carrier are chromed for low maintenance and added reliability. During the tests, I used only factory ammunition from Hornady, Remington and Winchester. During the first few rounds, the charging handle wouldn't readily go forward to load the weapon, which derived from the fact the gun hadn't been broken in. After a short period, this cleared up. Other than that, the gun functioned flawlessly, the groups were well within my varmint shooting standards and it was pleasant to shoot, thanks to the gas operating system.

I give the Smith & Wesson M&P15PC two thumbs up!

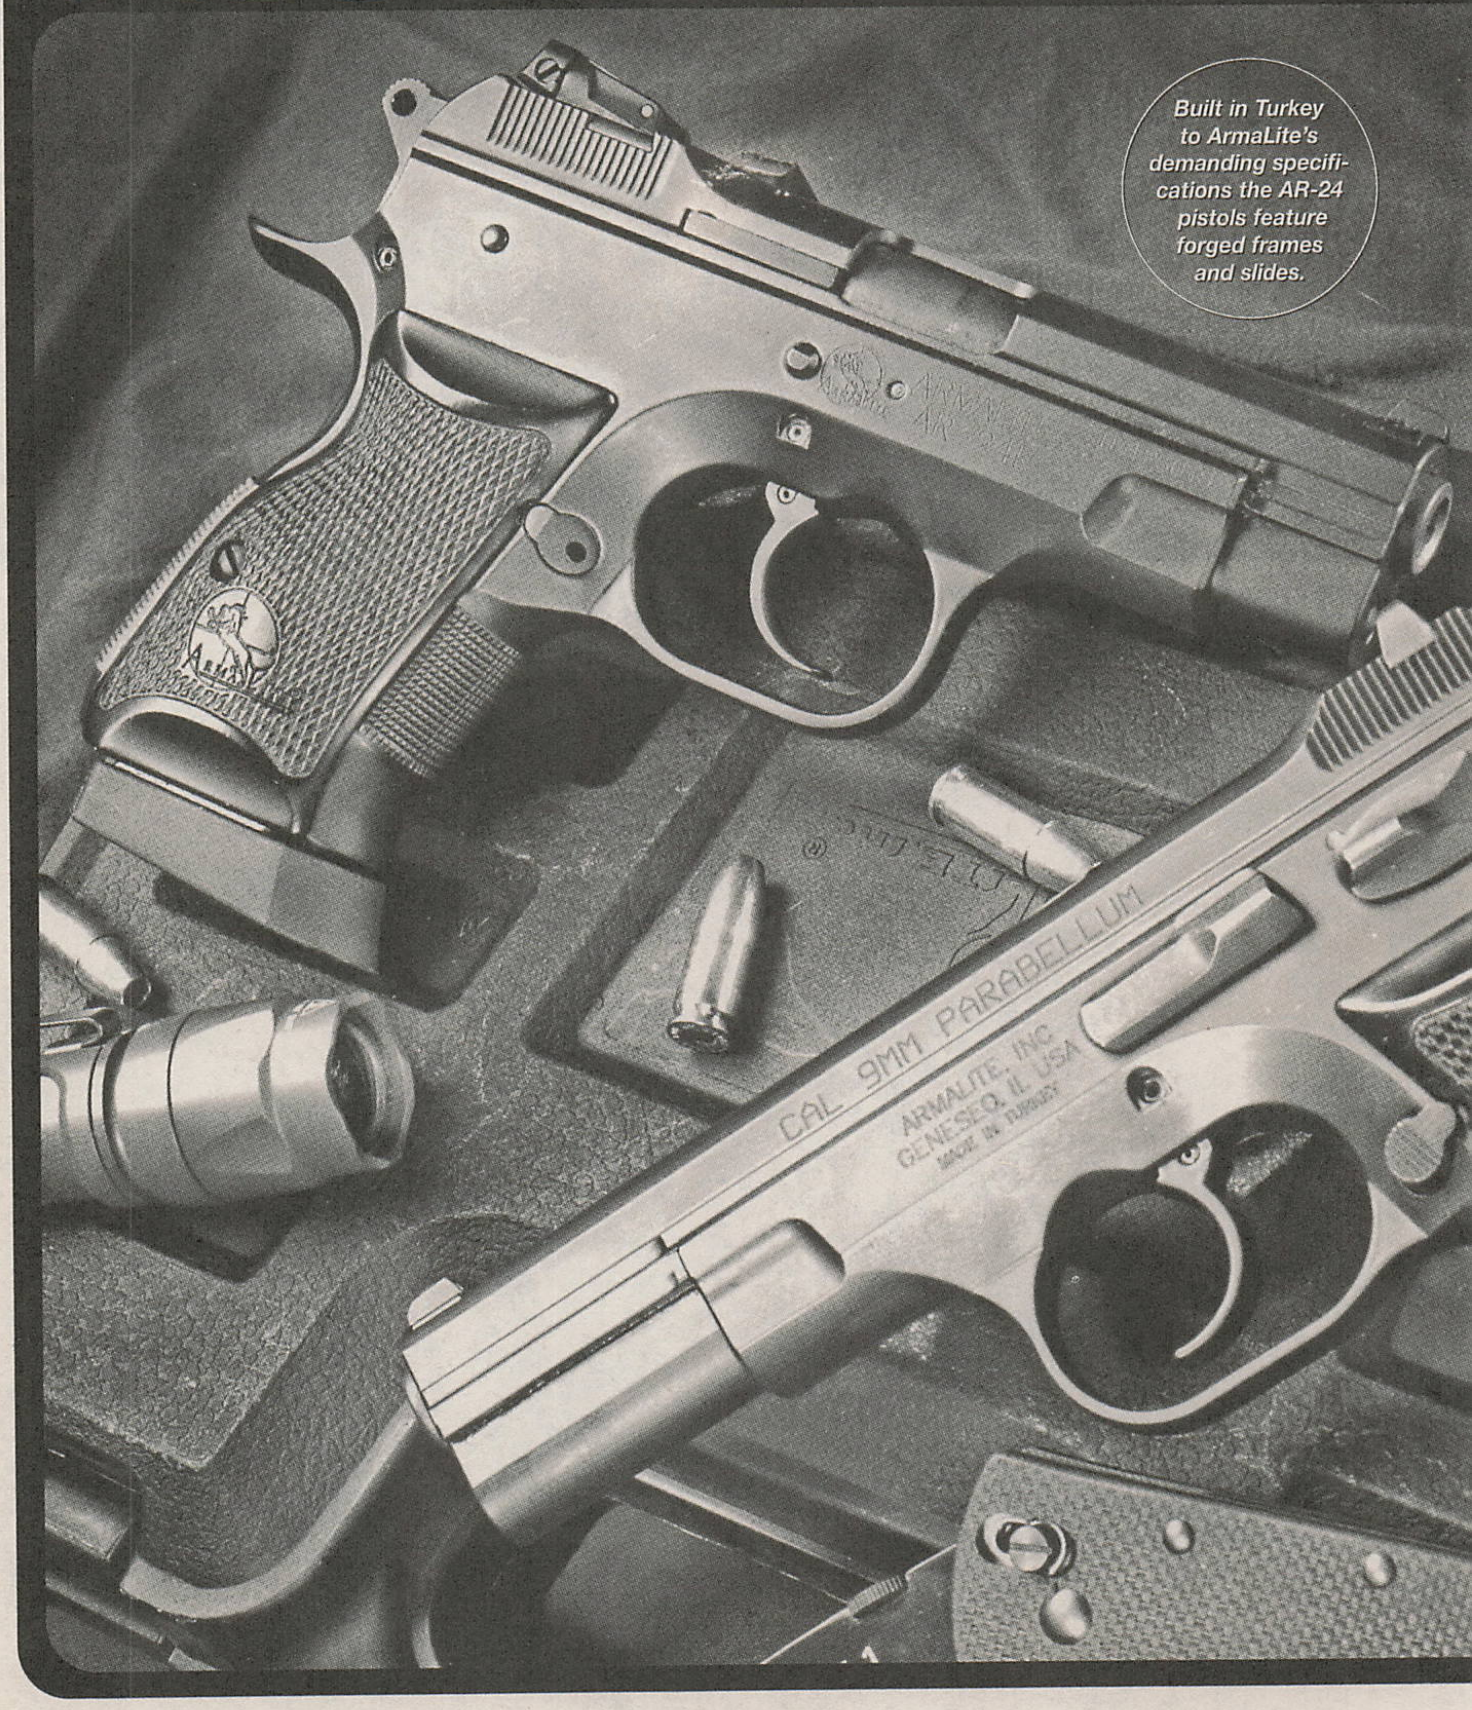
GUN TEST

TWO NEW 9MM



Built in Turkey to ArmaLite's demanding specifications the AR-24 pistols feature forged frames and slides.

ARMALITES

The AR-24 and AR-24K—high quality sureshots based on a classic design!

By Mike Detty
Photos by Alex Landeen

Far from being a lightweight, the ArmaLite AR-24 pistol will appeal to those that appreciate the recoil-reducing benefits of a steel-framed gun.

Next to the 1911 pistol, the CZ 75 is the most copied semi-auto handgun in the world. Produced in Czechoslovakia, Israel, South Africa, the Philippines and Italy, the guns vary in quality but all operate on the original Iron Curtain design. One of the nicest variants that I've seen now comes from Turkey. Not only is this pistol top notch in quality, but it's also the first handgun to wear the ArmaLite name!

Mark Westrom, a retired Army Ordnance Colonel and President of ArmaLite, announced recently that he had reached an agreement with Turkish arms manufacturer, Sarsilmaz, to produce an autopistol that closely resembles the famed CZ 75 pistol. Manufactured to ArmaLite's specifications, the new pistols will appeal to those looking for a high capacity pistol with double-action capability. Initially offered in two models, a full-size pistol and a compact, the guns are currently available in 9mm and .40.

According to Westrom, he first became aware of Sarsilmaz when he attended the Biennial Military Expo. He explained, "They're interested in manufacturing our rifles under license to sell them to the Turkish Ministry of Defense. Last year they came to visit and asked if I was aware of who they were. When I admitted that I wasn't, they invited me to visit their factory. I was impressed by their facility and manufacturing capabilities.

"The ArmaLite name is associated with new product innovation and processes. I'd already been impressed with the guns that I had inspected. Quality is a very important component of the ArmaLite legend and Sarsilmaz shares that same philosophy. When I entered the factory it was through their receiving department and I was surrounded by pallets of forgings for slides, barrels and frames. Their use of forgings and state-of-the-art CNC machinery cinched it for me."

For Westrom, this was the renewal of a love affair that started with the CZ 75 many years ago. "Back in the 1980s the only way to get a CZ 75 into this country was to be a GI stationed in Germany and buy one through the base Rod & Gun Club. I was, and did, and my love affair with the pistol began. But they were rough guns; even though they were machined from forgings that featured what could be best

called "socialist quality" levels. Most of the frames and slides exhibited rather coarse machine work and polishing that rounded exterior surfaces. Nonetheless, it was a fine pistol design.

"Although they were embargoed from sale in the US, they were sold extensively in Europe. Later the Italian firm of Tanfoglio started making them. Their competitive advantage was the ability to import them into the US. The Italians started using investment cast frames to cut costs. Tanfoglio and CZ fought for the world market but Tanfoglio (under the EAA and Springfield names) cornered the US market.

"When the Iron Curtain fell, the lower priced CZ 75s entered the US. But no forged models were available. This left ArmaLite with the opportunity to take the all forged and highly machined pistols and modify them to appeal to American tastes. Top quality but with a steel frame instead of aluminum. It's more expensive to produce but nothing feels like a handful of steel."

(1) ArmaLite uses forgings to build their slides, frames and barrels. (2) Westrom redesigned the AR-24's slide profile to more closely resemble that of a SIG SAUER P210. (3) ArmaLite's pistols can be carried cocked & locked or with the hammer down for a double-action first shot. (4) The compact 24K had an adjustable rear sight.

Gun Details

My test samples possess flawless cosmetics. Over the years I've had a chance to inspect numerous CZ 75 clones and none of them have displayed this degree of fit and finish. It's not unusual to find a CZ 75 clone that has heavy machine marks, uneven and heavy-handed polishing and wavy lines, all on the same gun. The ArmaLite guns don't have this problem. Flat surfaces on the frame and slides are sharp. Surfaces that transition from curved to flat are crisp, even and uncompromised. Westrom invited me to pull the slide off of the frames and wipe the oil clean from the part. What I found was a surface totally devoid of machine marks. Sarsilmaz uses a tough manganese phosphate finish and then applies a thermally cured epoxy finish over it for a handsome, matte black non-reflective finish that provides superior corrosion resistance. These are truly handsome guns!

Westrom incorporated a number of changes to the gun's design in an effort to make the pistol more appealing to the American market. Perhaps the most notable change has been to include a gently upsweeping beavertail whose lines are reminiscent of those found on custom 1911s. There's also a very pronounced backstrap that locks the pistol into the hand for a comfortable shooting grip. Sarsilmaz cuts a relief where the triggerguard meets the frame to allow the shooter to get a higher hold on the gun. Many of the CZ 75 clones incorporate a hooked triggerguard. ArmaLite wisely chose to eschew this feature since they knew it wouldn't appeal to American shooters. Westrom also made some changes to the slide so that it would appeal to, well, himself.

"Remember, the CZ was heavily influenced by the SIG SAUER P210, which was derived from the Petter M1935 pistol," said Westrom. "I always liked the sleek looks of their slides and I redesigned our slide to give it a similar look. I also incorporated fine slide serrations rather than the more coarse ones that are so common today." I really like the slide profile that Westrom designed. In my eyes, it gives the gun a more refined and distinctive look.

In my opinion, the CZ 75 became a popular gun because of its trigger design. This gun could be carried "cocked and locked" like a 1911 pistol, with its hammer cocked and thumb safety engaged. In this mode, all the operator needs to do is swipe the thumb safety down and press the trigger for a light single-action first shot. But this gun is also capable of firing its first round double-action. The gun can be carried with the hammer down, safety engaged or disengaged.

Westrom modified this lockwork somewhat, without really changing its function.

PERFORMANCE

(* Manufacturer's Suggested Retail Price)

His design locks the trigger, hammer and slide when the thumb safety is engaged and the hammer is down. If the hammer is cocked, the safety locks the trigger and hammer only, so that the chamber can be cleared and the gun unloaded without having to disengage the safety like on a 1911 pistol. These changes mean that many of the internal AR-24 parts will not interchange with other CZ 75 pistols.

Westrom used to shoot for the Army's Marksmanship Unit and for him accuracy is a critical necessity for any gun that wears the ArmaLite name. Sarsilmaz finely cuts the barrel's rifling to ArmaLite's specifications rather than using the more common button rifling technique that can cause metal to be displaced. But the result is a barrel capable of tremendous accuracy that meets ArmaLite's standards. The results impressed even me!

Shooting Impressions

Shooting from the prone position from the back of my SUV I was handicapped by the sun being in front of me, which made it tough to get a good sight picture. Despite this, I fired a number of groups from both guns under an inch. In fact, the compact model recorded an unbelievable 0.59 of an inch 5-shot, 25-yard group! These two ArmaLite pistols are the most accurate 9mm guns I have ever tested! Both guns shot to point-of-aim. Interestingly enough the manual suggests that the shooter adjust for windage by drifting the front sight in its dovetail and tightening its setscrew once the gun is sighted. The fixed sight model has no elevation adjustment. My compact model has a rear sight that is adjustable for both windage and elevation. The adjustable sight can be had on both the full-size and compact models. Guns with this feature also have checkered front and backstraps.

Recoil from the steel-framed, hi-cap 9mm pistol is very light and manageable, even in the compact model. Those of you looking for a lightweight gun will need to exclude the ArmaLite pistols from your search. But if you're the kind of guy that doesn't mind packing a little extra weight and enjoys the benefit of reduced felt recoil, the ArmaLite pistols might be worth a look.

Westrom told me that the pistols made for the Turkish military had very rough triggers typical of service guns. "We have altered the standards of the pistol a bit to gain an improved trigger pull. Our next shipment of guns should have even better triggers," said Westrom. But I could hardly discern any real room for improvement; the single-action trigger pull on both test guns broke at just under 5 pounds with very little overtravel. The double-action pulls weighed right around 12 pounds and were smooth and manageable.

I managed to get about 400 rounds through each gun and had zero failures. I used a quantity of ball and defense ammo, each possessing a very different bullet nose profile. They all fed without a hitch. Disassembly is easy and requires no special tools so I'll not waste space here describing the process.

So far, ArmaLite offers the AR-24 pistols in both full-size and compact models (AR-24K). Both are available in 9mm or .40. I've already mentioned that the models that are ordered with adjustable rear sights also have checkered front and backstraps. According to Westrom, a .45ACP version should be available shortly. Down the road, he foresees a polymer-framed version of the pistol built with law enforcement sales in mind.

Final Notes

Made from forgings and machined to exacting specifications, the new import from Turkey possesses all of the accuracy and reliability needed for a service firearm. These pistols also have their own distinctive styling that sets them apart from other CZ 75 clones. Quality-wise, these guns stand head and shoulders above any other clone that I have examined. And, according to ArmaLite President Mark Westrom, that's what makes them good enough to be the first pistol to wear the ArmaLite name!

GUN TEST

REMINGTON .204 RUGER XR-100 RANGEMASTER

In the field with the Remington XR-100 (note the new Outfitter Tuff camo clothing).

It's a sub 1/2-MOA varminter sureshot!

By Paul Markel

I suppose it's appropriate that I began this review on one of my favorite holidays. When I sat down and began to compile my thoughts on the rifle featured herein it was February 2nd, Ground Hog's Day. According to those who keep track of such things, Buckeye Chuck, the Ohio version of Punxsutawney Phil, did not see his shadow and there would be an early spring. Despite that optimistic outlook, it was 2 degrees Fahrenheit when I cozied up to my computer and typed the first words of this article.

It's no secret that I enjoy my time in a field with a precision rifle, and this review would be an opportunity not only to cut neat little groups on paper, but to add to my running count of marmots

The Remington XR-100 rifle is chambered in .204 Ruger.

(1) Ammunition was from Federal, Hornady, Remington and Winchester.

(2) A superb 0.30" group from 100 yards with the 40gr Remington load.

(3) The 40gr Hornady load posted nice 1/2" shot group from 100 yards.

taken. Before I could do any of this, I had to wait until the mercury rose a great deal and for my prey to emerge from hibernation.

Gun Details

Remington's XR-100 rifles are built around the company's classic XP-100 action. A single-shot rifle, the XR-100's bolt-action is mated to a 26-inch contoured varmint barrel. The satin blue barrel has a concave target crown to contribute to the gun's precision. A black/gray laminated thumbhole stock supports the barrel and action. The fore-end is vented for rapid barrel cooling. Two standard sling studs are found fore and aft.

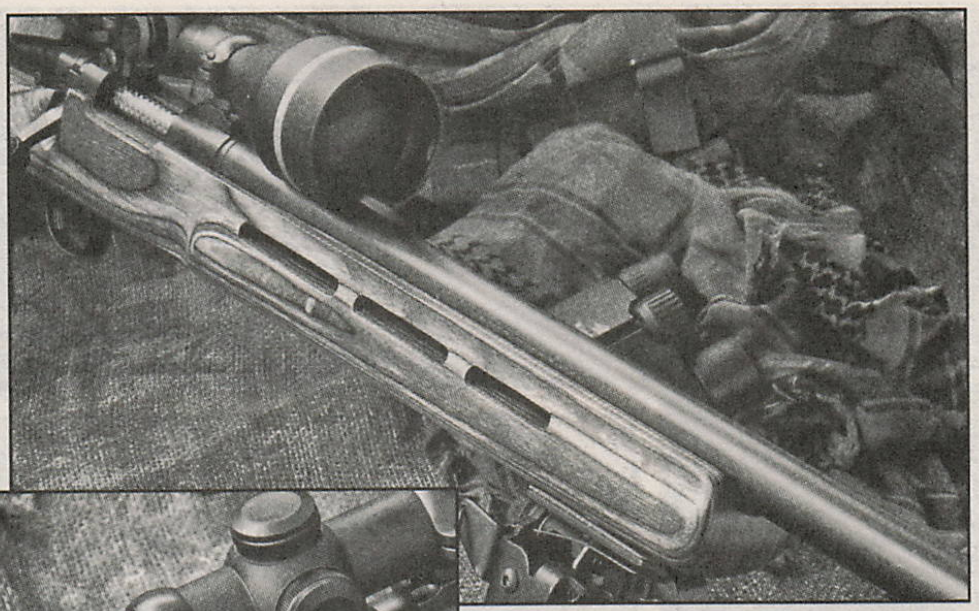
As for specifications, the 26-inch barrel has a 1-in-12-inch rate of twist. The overall length is 45.38 inches, the empty weight is 9.13 pounds and the length of pull is 13.5 inches. My test gun was chambered in .204 Ruger, but these rifles are also built for the .223 and .22-250 Remington. The .204 caliber is the baby of the bunch, being barely three years old.

A match-grade factory rifle, Remington has installed their Model 40-XB target trigger in the gun. The trigger weight can be adjusted from 1.5 to 3.5 pounds. Out of the box, the trigger is set in the 3-pound range. Dry firing the rifle for the first time I was impressed by the crisp, clean break of the trigger.

For a rifle like this, I wanted some quality glass that would not only aid me at the target range but in the varmint fields as well. The new Leupold VX-L seemed just the ticket. The "L" in the VX-L indicates a low mount capability. Most riflescopes with an objective lens over 40mm require medium or high mounts, which gets your cheek up off the stock for an uncomfortable stock-weld without a raised comb. The VX-L has a concave crescent shape below the objective lens. This allows the shooter to mount the scope lower on the action.

The VX-L models are available in numerous variable power configurations with either a 50 or 56mm objective lens. I would use a 4.5x14 power VX-L with a 50mm lens. This unit has 1/4-MOA click adjustments and a focus-adjustable eyepiece.

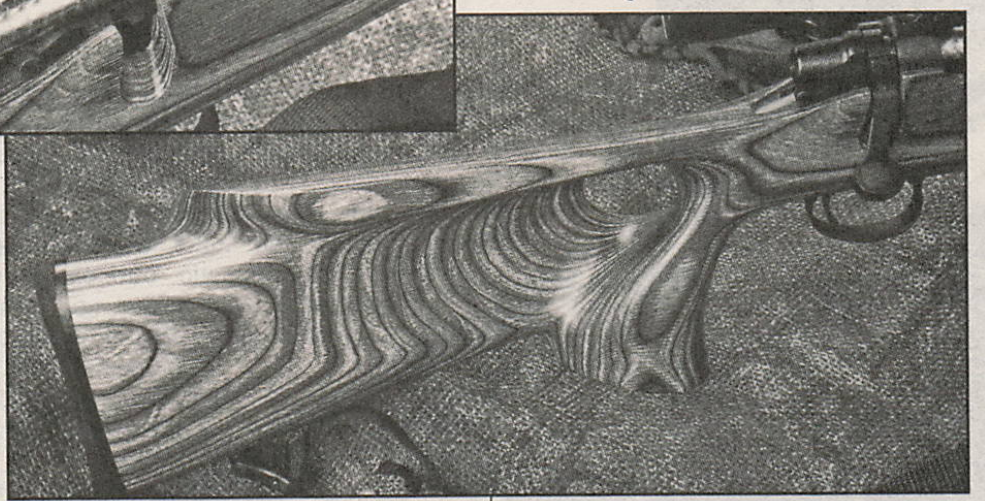
Leupold offers several reticle choices for the VX-L including a Duplex, Boone & Crockett, and Varmint Hunter. My optic had the Varmint Hunter reticle. The scope had a matte black finish. I affixed the riflescope to the Remington gun with Leupold bases and low mount rings.



The contoured varmint barrel is free-floated on the laminated stock.

The XR-100 is a single-shot bolt-action.

The laminated thumbhole stock contributed to shooting comfort as well as aesthetics.



Range Time

I enlisted the service of several .204 Ruger loads. Naturally I would have Remington ammunition. Big Green provided 32- and 40-grain Premier Accutip rounds. Hornady also has 32- and 40-grain V-MAX loads for this little cartridge. The Federal load was their 39-grain BlitzKing and the Winchester round used a 34-grain JHP that was Lubalox coated.

In all, I had six different loads from four manufacturers. Surely the rifle would excel with one of these. Many readers may know that the .204 was the brainchild of the folks at Hornady and Sturm, Ruger & Company. The cartridge is based upon a necked down .222 Remington Magnum.

On the range, the Leupold riflescope was simple enough to zero and soon I had my paper varmint targets set out at 100 yards for some accuracy testing. As this was a Remington rifle, it seemed only appropriate to start out with the 40-grain Accutip load.

Firing the first three shots for record, I

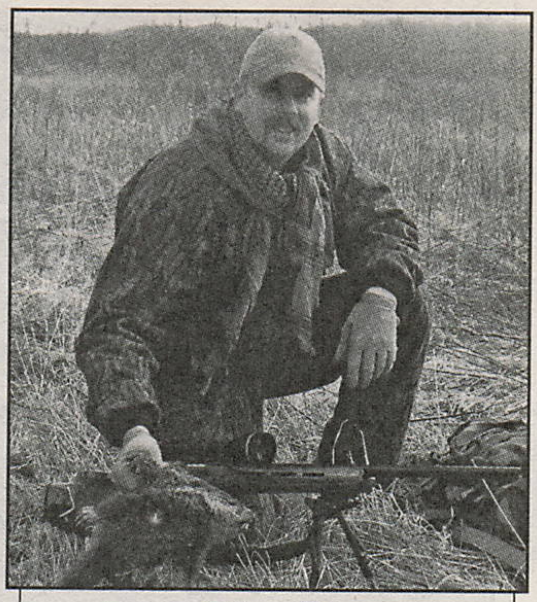
could tell that I was going to enjoy working with this rifle. Even with the scope set for 14x, it was difficult to clearly see the small .20 caliber holes in the target paper. From what I could make out, the shot group seemed to be at best a half-an-inch. I fired a couple other loads before I went downrange to closely examine the results.

In order to get the most accurate measurement, I decided to check the groups with my Franklin Arsenal digital caliper. The caliper reads to thousandths of an inch plus 10 thousandths by zero or half-an-inch. The recorded group with the 40-grain Remington load was a mere 0.30 of an inch. Every .204 load easily broke the MOA mark. As a matter of fact, all of the six-shot groups were below 3/4-MOA.

With the Leupold glass zeroed in, it was time to hit the field with the XR. Before I headed out I installed a Harris SL bipod onto the front sling stud and an Uncle Mike's rifle sling to the gun.

A slight wind was blowing from the northeast and the temperature measured a comfortable 50 degrees when I started out across a harvested cornfield. My objective was a gleaned soybean patch a few hundred yards away. I felt sure that the Ohio marmots, fresh from their winter hibernation, would be out searching for what few soybeans had been left behind by the John Deere Combine.



A successful hunt. This marmot was taken from over 200 yards.

Setting up on a low rise I was able to survey three to four acres of flat land and, more importantly, the wood line that bordered the field and concealed the ground hogs' winter dens. After 15 to 20 minutes, I spotted movement through my compact hunting binoculars. Midway down a grassy bank a marmot cautiously emerged. Getting down behind the rifle, I put the scope on him and estimated the range as between 200 and 250 yards. Before I could line up the crosshairs and press the trigger he scurried into some tall grass and I lost sight of him.

For the next 40 minutes or so I kept an eye on the bank and glassed the surrounding field. Occasionally I could sense movement in the grass but I could not get a clean shot. I knew I would get one shot on this guy and I wanted to be sure it was a good one. Finally he moved out into the open and found a bit of grass to munch on. Placing the horizontal crosshair on his back, I pressed the trigger and rode the mild recoil. The buck of the rifle was gentle enough that I never lost sight of my target.

For a split second I thought I might have missed. Almost every marmot I've shot will twitch, buck, jump or do some-

thing when hit. This one remained still. While it seemed much longer, it took one or two seconds before the marmot rolled lifeless down the bank. I kept the scope on him for few moments but he never moved another inch.

The distance to the downed varmint turned out to be about 215 yards. The 40-grain Accutip bullet had done its job perfectly. The exit wound was spectacular. The .204 Ruger load is a fantastic varmint whacker.

Extras

This last fall I picked up some hunting clothes from Jim Crumley's Outfitter Tuff line. Many of the outdoorsmen in the audience will be familiar with Jim's Trebark pattern. What you may not know is that there is a new Trebark pattern. It is like the original but the shadow lines are muted or blended. They also have a new pattern called Outfitter Tuff Camo. This pattern includes green and rust brown in addition to the subdued gray and earth tones.

Before I sat down to pen this review I wore the Outfitter Tuff clothes to the field on numerous occasions. I found all the gear to be comfortable, well made and practical for hunting. I particularly liked the Chamois Bomber Jacket for the cool days in fall and early spring.

Prior to wrapping up this review I took the XR-100 rifle to the range and field several times. While the rifle is a bit long and heavy for general hunting chores, for varmint hunting, where you can set up and shoot from a prone position, this long gun is truly a ground hog's worst nightmare. For those of you west of the Mississippi, I can only imagine the enjoyment you will have cleaning out a prairie dog town with a precision instrument like the XR.

One of the most noteworthy aspects of the Remington XR-100 rifle is the fact that

Note the uniquely shaped objective lens of the VX-L that allows lower mounting than most scopes of its size.

it is, indeed, a factory gun but it shoots like a custom built model. If you were to have a custom shop build you a rifle of this sort with heavy target barrel, match trigger, and laminated stock you would expect to spend a couple thousand dollars easily. The suggested retail price for the XR-100 at press time was less than $1100. Before I put this review to bed I checked www.gunbroker.com and there were seven XR models in various calibers all priced below $1000.

Final Notes

If you like to put sub-MOA groups on paper as well as whack varmints at distance, the Remington XR-100 is definitely worth consideration. The quality components of the Remington rifle combined with the clarity of the Leupold scope and the excellent ballistic capabilities of the .204 Ruger make for one deadly package when you hit the varmint fields.

When reliability is critical to mission success...
Cutaway View of Gas Piston System Components
BUSHMASTER Gas Piston System
The Bushmaster Gas Piston System Rifles bring a new level of reliability to the "AR" type rifle platform by eliminating carbon build up and gas leaks. Much like the systems found on AK-47s and FALs, the Gas Piston System functions with a wider range of ammunition at a lower cyclic rate - using less gas pressure - for improved reliability and control. Cleaner operation is achieved as carbon build up and powder residue cannot reach or foul the Upper Receiver and Bolt Carrier. A detented plug in the Gas Block allows easy access for cleaning the System's Hard Chrome Plated Piston and Operating Rod.

TACTICAL SHOTGUN ACCESSORIES FOR THE PROFESSIONAL OPERATOR
OUR TELESCOPING STOCK SYSTEMS USE AIRCRAFT ALUMINUM ADAPTERS
Mesa Tactical was a pioneer of telescoping stocks for law enforcement shotguns, which are necessary for operators wearing body armor, or for smaller statured shooters; a telescoping stock provides the length of pull the situation demands. With our telescoping stock systems the shotgun stock is replaced by an adapter, to which standard AR-15 grips and buttstocks can be fitted. Our stock adapters are cast and machined from aircraft aluminum, with a variety sling mounting options. Our new LEO adapters and stock systems are now available at attractive prices that may surprise you.

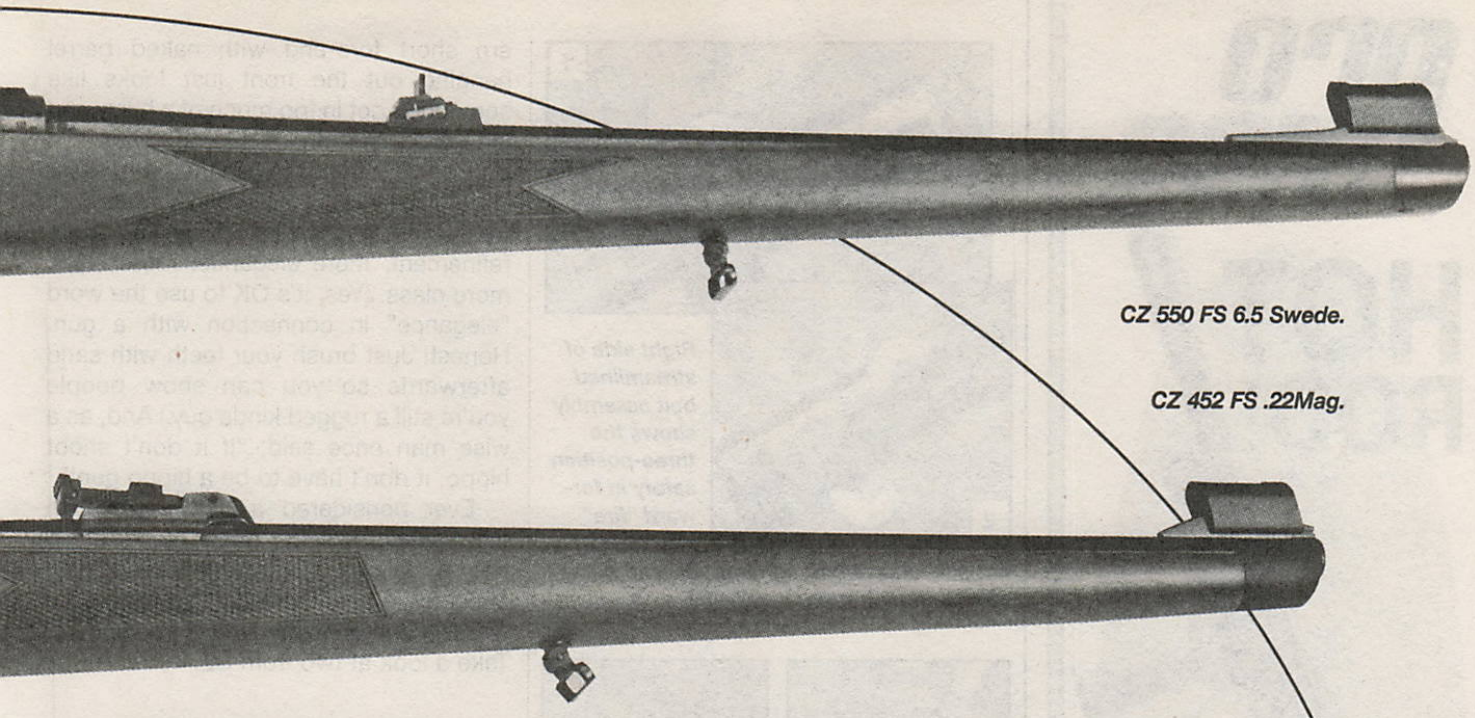
The classic Bavarian lines of these full-stocked CZ bolt guns hark back to more leisurely days and simpler times.



CZ 550 FS 6.5 Swede.

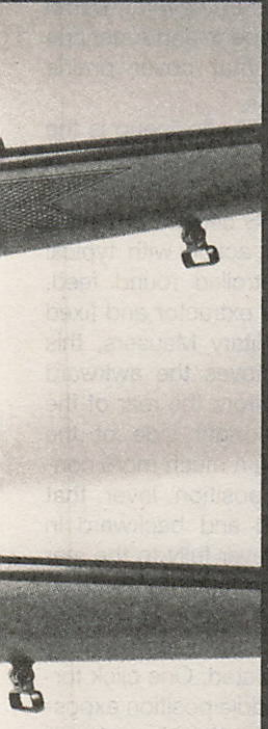
CZ 452 FS .22Mag.

GUN TEST

CZ USA DUO

Best of both worlds—centerfire/rimfire—550 FS 6.5 Swede and 452 FS .22Mag!

By Denis Prisbrey



If you believe all the hype that's tossed at you daily in our modern world, you just ain't spit unless you've got the latest, greatest, fastest and biggest. In just about everything, including the type of hunting gun you shoot. Gotta be a magnum (regardless of what your intended quarry is), gotta hurt about the same at both ends (have to show you're a member of "The Club"), gotta be checked out for elephant (even though you'll never get closer to Africa than your widescreen plasma TV), and it's gotta be black and silver (despite the fact that you hunt in parts of the desert that have not seen rain since Noah beached his ark).

Well, tain't necessarily so. Think about what you really need in a hunting rifle, and don't worry about the newest and shiniest big-bore blaster your buddies are bringing home from the gunshop. Chances are, those hard-charging boomers won't get carried much (too heavy), and very likely won't be fired enough (too expensive and painful) to gain any real proficiency with them. Depending on where and how you hunt, a deer isn't going to notice whether it was harvested with a .243 or .50BMG, and there's certainly no advantage in chasing whitetails through 50-yard brush with a 24-inch .338 Magnum sporting a 4x12 scope that weighs half as much as the rifle. True, sometimes heavier calibers and longer-range capabilities are needed, and some climates are kinder to a stainless rifle than to a blued one, but not always. Occasionally it's nice to slow down some, take a deep breath, and look backward. Breathe in slowly, breathe out slowly. That's it, let's consider a more relaxed way to go about hitting the woods.

For bolt guns, my lifelong preference has been the full-stocked versions, both military and civilian. Their roots extend back to the graceful smokepoles of the late 1700s and early 1800s, and those old long rifles have always intrigued me. A full-length stock "flows"; a mod-

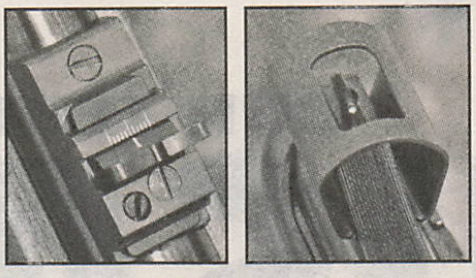
Right side of streamlined bolt assembly shows the three-position safety in forward "fire" position (1), left side shows bolt catch at left and bolt disassembly button at right (2).



Sights on the 550 FS are fully adjustable, front blade is well protected by its steel hood.

(1) Turkish walnut's well fitted, and the cheekpiece looks right at home on this stock configuration.

(2) Single set-trigger on the centerfire rifle is user adjustable via this screw.

ern short fore-end with naked barrel hanging out the front just looks like somebody got in too much of a hurry and left something off. To me, one says, "I'll do the job for you," while the other says, "I'll do the job for you, and you and I'll both look good while I do it!" More refinement, more elegance, more style, more class. (Yes, it's OK to use the word "elegance" in connection with a gun. Honest! Just brush your teeth with sand afterwards so you can show people you're still a rugged kinda guy.) And, as a wise man once said, "If it don't shoot hippo, it don't have to be a hippo gun!"

Ever considered a bolt-action with full-stocked walnut, deep blued steel, and a caliber that doesn't send your shoulder to a chiropractor? Or send your wallet to the bank for a loan? You should. Take a look at two from CZ.

Model 550 FS Details

CZ USA imports a fairly extensive lineup of bolt-action rifles from the Czech Republic in a number of sizes, calibers and styles. The company's been producing Mauser-based boltguns for many years and has a solid background with them, along with a fine reputation around the world. They know what they're doing and it shows in their rifles. CZ's 550 Series runs the gamut from .22-250 to .458 Winchester Magnum, in several barrel lengths, and both European and American stock configurations that cover prairie dogs to elephants.

My favorite in the CZ rifle lineup is the Model 550 FS (Full Stock). Available in six calibers: .243, 6.5x55, .270, .308, 9.3x62, and .30-06, the 550 FS centers around a square-bridge Mauser action with typical Mauser features: controlled round feed, large and reliable claw extractor and fixed ejector. Unlike the military Mausers, this commercial version moves the awkward rotating "wing" safety from the rear of the bolt assembly to the right side of the receiver, where it's now a much more convenient three-position lever that moves forward and backward in use. With the lever fully to the rear and covering both painted dots on the receiver, the trigger mechanism and bolt are both locked; neither can be manipulated. One click forward, in the middle position exposing the white dot, the trigger is still locked, but the bolt can be opened to load or unload the rifle safely. Fully forward with red dot exposed means all systems go. The bolt assembly has also been re-configured with a flatter and wider rear bolt sleeve section that includes a

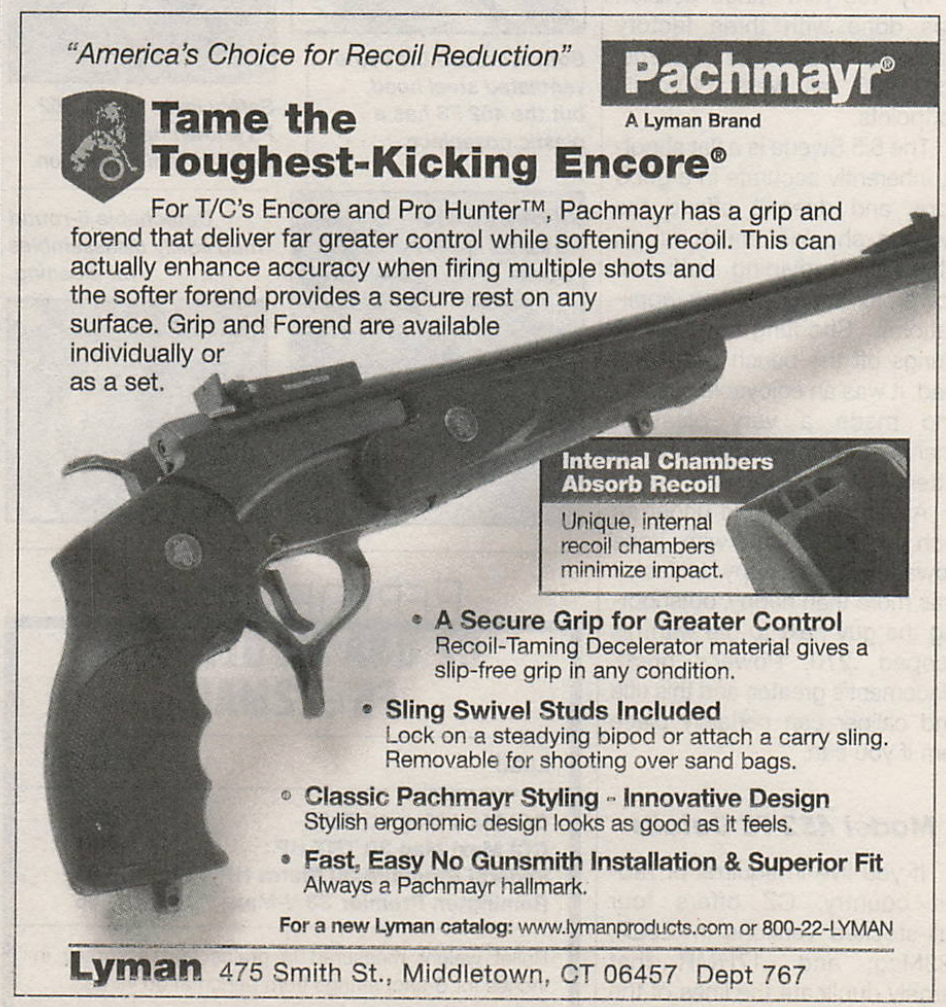
visible cocking indicator. Other upgrades to the time-proven Mauser design include a single set-trigger, a hinged magazine floorplate in some calibers and detachable magazine in others, and a re-designed bolt catch/release lever at the left rear of the receiver to remove the bolt for cleaning.

Outside, the 550 FS wears that classic full-length Mannlicher wood that sells the gun for me, done here in relatively plain-figured Turkish walnut with a satin finish and Bavarian-style lowered comb with left side cheekpiece. This stock, unlike the higher straight-line American versions designed for scope use, adds a softer profile to the rifle that I like, and even though I normally think a cheekpiece clutters up a clean stock pattern, here it just seems like it belongs. One-inch sling swivels are included fore and aft; out front the stock ends in a steel nosecap and there's a ventilated black rubber recoil pad at the tail end. Cut checkering on the wrist and fore-end were both perfectly done on my test sample.

Up on top, the 550 FS comes with actual iron sights, something that seems to be disappearing on many US-made boltguns today. The 20.5-inch hammer-forged, well-polished and deeply blued barrel carries an all-steel fully adjustable rear U-notch blade that slides left or right, and up and down on a ramp marked in white for repeatable incremental adjustments, and a small white dot on a narrow front post under a steel hood. The front blade, incidentally, is easily removable by depressing a small plunger, and CZ USA can set you up with replacement blades in several different heights, and with fiber optic inserts in yellow, green, and red. I personally think clamping glass on this type of rifle is every bit as bad a sin as doing it to a lever-action, but the receiver is grooved for scope mounts if you feel you just have to.

Model 550 FS Shooting

There's no guesswork in the accuracy department with most centerfire CZ rifles. The 6.5 Swede was an interesting choice to offer in this model, and figuring the well-mannered European round was a natural for the well-mannered European rifle, I



"America's Choice for Recoil Reduction"
Pachmayr®
A Lyman Brand
Tame the Toughest-Kicking Encore®
For T/C's Encore and Pro Hunter™, Pachmayr has a grip and forend that deliver far greater control while softening recoil. This can actually enhance accuracy when firing multiple shots and the softer forend provides a secure rest on any surface. Grip and Forend are available individually or as a set.
Internal Chambers Absorb Recoil
Unique, internal recoil chambers minimize impact.
• A Secure Grip for Greater Control
Recoil-Taming Decelerator material gives a slip-free grip in any condition.

asked for a test sample. It turned out to be an excellent combination.

The reason these rifles are known to shoot well in basic form is a combination of the stock design, barrel construction and triggers. The lower rear stock-to-barrel angle works more comfortably with iron sights; especially for longer-necked shooters like me, there's not as much neck and shoulder scrunching to get everything lined up. CZ rifle barrels are drilled, reamed, lapped, hammer forged and then run through a powder honing machine to remove any residual roughness that can accumulate copper jacket material to affect accuracy. The company likes their barrels and treats them well.

Although I didn't use it at the range, the set-trigger can also contribute to those tiny little groups we like to brag about around the campfire. The regular trigger on my sample broke at slightly over 3.5 pounds; pushing it forward to set it gave a pull of 1.25 pounds and it can be adjusted in either direction, without a gunsmith, with the set-screw just forward of the trigger. Altogether, the way these rifles are built turns out some pretty good hardware and at very competitive price levels.

My 100-yard range session was done with three factory loads from Remington, Federal, and PMC; all were 140-grain softpoints.

The 6.5 Swede is a flat shooter, inherently accurate in a good bore, and doesn't offend the average shoulder much at all, while still providing sufficient power for many hunting applications. Shooting three-shot strings off the bench with each load, it was an enjoyable session and made a very pleasant change from some of the heavier hitters I usually deal with.

Anytime I can hold under an inch at 100 yards with irons nowadays, I'm happy. In fact, I was more than happy, outshooting the guy next to me with his scoped .270. Power's great, placement's greater, and this rifle and caliber can certainly place 'em if you can.

Model 452 FS Details

If you live in squirrel or rabbit country, CZ offers four full-stocked versions in .22LR, .22Mag, and .17HMR that largely duplicate the lines of the centerfire rifles. The Model 452 FS is roughly 2.5 inches shorter than the 550 FS, and obviously uses a different action system. It also uses totally different sights, in this case even though the bigger bore version was based on a military rifle, the rimfire gets the military-style sights.

This bolt action also uses a square bridge receiver, grooved for a scope base with a short-travel bolt that features dual opposed extractors for positive extraction, and a fixed mechanical ejector. The bolt itself comes out for maintenance in typical rimfire fashion by pulling the trigger as the bolt is removed rearward through the back of the receiver. The safety in the right rear of the bolt assembly is a two-position lever that works backwards from what you'd expect. It's engaged to lock the trigger and bolt when forward to cover the red dot, and disengages to the rear to expose the red dot. Some shooters don't like this safety, but on a rifle that's not likely to be manipulated under stress, it shouldn't be a major problem in the field if you're used to the more common safeties.

The sights are a modified military tangent rear graduated out to a moderately wishful 200 yards with full windage adjustments, and a substantial square front post that can be moved on its ramp inside a ventilated steel hood for fine elevation adjustments. The 20.7-inch barrel also carries a recessed muzzle crown, which the centerfire 550 FS doesn't have.

The 452 FS is a full-sized and full-featured rifle, it's not a downsized "kid's" model. Wood is the same Turkish walnut with perfectly done checkering on wrist and fore-end, and the stock's fitted with the same sling swivels. It even comes with a good solid rubber butt pad, which in this case serves more to anchor the stock against the shoulder while working the bolt than to ease recoil. That's a feature I like on any boltgun, regardless of recoil levels.

Two other differences are a stamped triggerguard (still nicely polished and blued), and a detachable 5-round steel magazine. There's no set trigger on this one; my sample tripped at 4.25 pounds with minor creep and quite a bit of overtravel.

Model 452 FS Impression

While the .22Mag does extend the rimfire capability noticeably over a .22LR, and enthusiastic shooters do take the Magnum out to 100 yards or so, my aversion to scopes on these guns would leave me feeling that a squirrel or jackrabbit in my neighborhood ought to be pretty safe in front of me much beyond 75 yards due to the size of the targets, if nothing else, so I tested for accuracy at 50 yards to get an idea of what to expect from the CZ rimfire.

The hefty iron sights on the 452 FS were coarser than the irons on the 550 FS, and quicker to pick up. I'd suspect the accuracy with this rifle would be improved with glass, but... As it was, using the four .22Mag loads I had on hand was good enough for the varmints I go for.

SPECIFICATIONS
CZ USA MODEL 452 FS

CCI Maxi Mag 40 Solid	0.94
CCI Maxi Mag 30 TNT HP	0.94
Federal Premium 30 Sierra HP	1.38
Remington Premier 33 V-Max	1.06

Bullet weight measured in grains and accuracy in inches for 3-shot strings from bench at 50 yards.

If your eyes can see them and you can hold steady enough to put the bullet where it needs to go, this would make a respectable rimfire varminter at intermediate distances. Magnum ammunition is pricier than .22LRs, but if you view this rifle as a hunter rather than a Saturday afternoon plinker, it changes the perspective a bit.

Final Notes

You can find other foreign and domestically produced Mannlicher-style rifles, and you can trade a good-sized paycheck or two on them, but performance-wise I doubt you'd find much better in the same price range, or even slightly higher.

My only dislikes on the centerfire rifle were the synthetic magazine floorplate and the tiny white dot sight. I'd prefer a more substantial front blade, but at least the relatively fragile (bendable) post here is fully protected by the steel hood. The floorplate extends about 0.13 of an inch below the wood, which is livable, but it really should be a more durable metal (preferably steel) in my opinion. It does latch securely, so unless you break it, it shouldn't be a problem, and you can reduce the risk of that by leaving it closed, loading and unloading from the top, and using it as a blind magazine. Manufacturer's Note: If the customer receives one the 550 models that has a polymer floorplate, CZ USA will exchange it for a steel one at no charge. On the rimfire rifle, I'd reverse the safety to be consistent with the bigger bores, and I'd like to see a steel fore-end cap instead of the plastic one that comes on it, both very minor issues.

Otherwise, both balance well for carry, both shoulder easily, the weight of the extra wood shouldn't be a problem on a long trek, the 6.5 Swede caliber is mild enough to actually enjoy practicing with, it's relatively inexpensive to hand load with any of several good bullets on the market, the 550 FS comes with legendary Mauser reliability and more than enough hunting accuracy, and the 452 FS is a grown-up rimfire for grown-up shooters.

And, they're both elegant throwbacks to kinder times when a day in the woods was an experience to be enjoyed with a rifle that was there to do a job, not a competition to show who has the biggest and baddest shoulderbone buster on the block. Raw power is a poor substitute for good marksmanship; you just might discover that bigger isn't always better.

If your local dealer doesn't stock the CZ line, they can be ordered from CZ-USA at PO Box 171073, Dept CH, Kansas City, KS 66117; 800-955-4486; www.cz-usa.com

The Kahr CW40 and test targets.

When you buy one of the regular Kahr pistols in the K or P series, you get high quality and total reliability in a compact package that has superb hold ergonomics and outstanding performance. For all of this, the price is quite reasonable. But what if you could get these features at a lower price and with the same guarantee?

Gun Details

A few years ago, Kahr introduced the CW9, and now we have the gun featured here, the CW40. Now, I know what you might be thinking, with the price reduction, they must have cut some corners, right? And the answer is, no, not where it matters. Let's look at each of the small differences.

First, the rifling in the barrel. The K9, P9 and others in the regular line-up have expensive match-grade polygonal rifling. The CW series guns have traditional land-and-groove cut rifling. In muzzle velocity, this will translate to about 10% less. In accuracy, no change. This was, perhaps, the biggest cost-savings for Kahr.

The CW9 and CW40 are most closely related to the P-series Kahr pistols, as they have the polymer frame. On the P-series guns, the slide latch lever is a machined part. The CW pistols have a slide latch that's made by Metal Injected Moulding (MIM). For strength, this is not inferior, it's just not quite as pretty as a fully machined part. Plus, it costs a lot less. Instead of the elegant roll-markings on the slides of the regular P-series guns, the "CW40" and "Kahr" on my pistol is simply stamped. The CW9 and CW40 are shipped with only one magazine.

Finally, there are fewer machining cuts on the slide and one of the omissions is a dovetail-cut for the front sight. On the CW pistols, the front sight is internally riveted in place. The rear sight is still in a dovetail, laterally adjustable by drifting. All of the other well-known Kahr features are present, including the automatic internal firing pin block.

Shooting Impressions

The CW40 also has the silky-smooth DAO trigger pull and the excellent Kahr balance-in-the-hand. With any .40 pistol of this size, I usually expect unpleasant felt recoil. In the CW40 I found that superior ergonomics worked out. It felt about like a 9mm with a +P load.

At 25 yards from a casual rest, the Remington 180-grain JHP grouped into 2.25 inches, all in the black, with three in the 10-ring. The Hansen 180-grain JHP score was 3.25 inches, all in the black, well-centered. The group with the CorBon 135-grain Pow'RBall load was 3.50 inches, two in the 10-ring. I think we can assume that the cut rifling delivers accuracy.

Final Notes

There were, of course, no malfunctions. In the past 10 years, I have fired numerous Kahr pistols and have yet to have one hang up in any way. Overall, in the CW40, did I find anything to criticize? Well, okay, one little thing, the back edge of the slide latch is rather sharp and I plan to use a file to round it out a bit.

I think the whole idea of the CW series is a good one. For some of us, the economy price makes a difference. When selecting a carry-gun, the savings might have made us settle for something less than a Kahr. Now, thanks to the CW9 and CW40, we don't have to make that decision.

GUN TEST

KEL-TEC SU-16CA

Super versatile carbine is a 4-season sporter!

The .223 SU-16 carbine cloaked in woodland Camo Form.

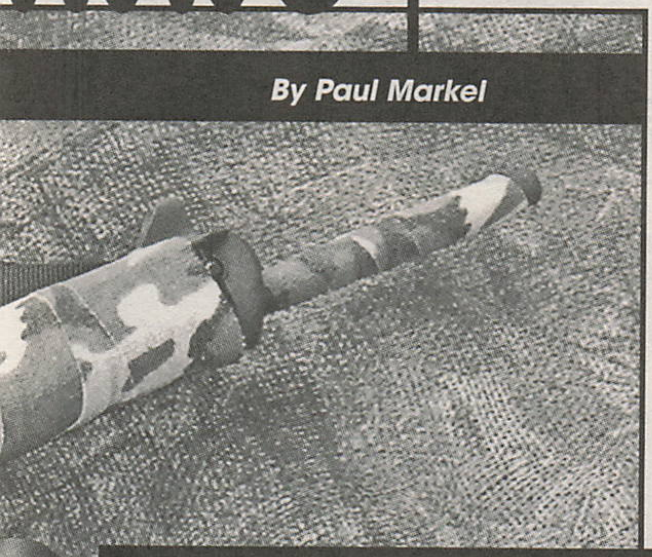
The author stalking in the snow with the Kel-Tec SU-16CA.

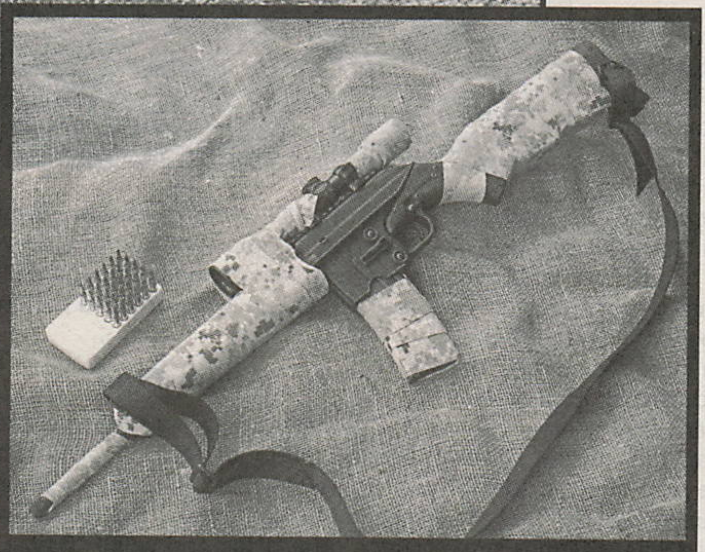
Afield with the SU-16CA .223 sporter.

.223

By Paul Markel

When I was first introduced to the rifle featured herein I must admit that I took a near instant liking to it. The rifle had a sleek, no-nonsense appearance. When I picked it up, it handled well. I had been working with this gun for about a year. When I took it out recently it occurred to me that the gun had the potential for an excellent all-around "sporter."





Blending with brown terrain the Kel-Tec sporter wrapped in digital desert Camo Form.

Kel-Tec SU-16CA in winter dress. Weaver 4x riflescope in place.

Gun Details

Let's start at the beginning and talk specifics. Many of you may be familiar with Kel-Tec's SU-16 line of rifles/carbines. Yes, this firearm has a 16-inch barrel and is less than 3 feet in overall length. So, I suppose it could be more accurately categorized as a carbine rather than a rifle.

Kel-Tec CNC has a number of different models in the SU-16 line. Each of these is designated by a different letter. What the folks at Kel-Tec have done is combine the attributes of the "A" and "C" models. What you have is the A model's full stock and the C model's sight arrangement.

The stock on the "CA" is a take-down version—it can be folded under for compact carry and storage. However, the gun cannot be fired without fully extending the stock. As with other SU rifles, the CA model comes with Kel-Tec's 10-shot polymer magazines. Two magazines are included with the gun and they can be stored in the open port underneath the stock. A single 30-shot AR magazine will also fit in this compartment.

The SU-16CA rifle comes in at just under 3 feet with an overall length of 35.9 inches. With the stock folded under, the reduced length is only 24.9 inches. Empty weight is a mere 4.7 pounds. Black polymer is used for the stock and forearm. The steel barrel is parkerized.

Magazine capacity is limited to 10 shots from the factory or you can use any AR/M-16 magazine. The gun has a true 5.56mm chamber, not merely a .223. Barrel length is a fairly standard 16 inches with the expected 1:9-inch twist.

On the right side of the rifle is the ejection port with the charging handle. On my rifle I had a replacement handle that also acted as a brass deflector. The magazine release is again a pretty standard push-button affair. Factory sights include an elevation adjustable front post and a windage adjustable rear peep. The rear sight is mounted on a flat-top Picatinny-style rail in the upper receiver. For a manual safety, Kel-Tec has included a crossbolt design. The safety button is concave on one side and convex on the other.

To use the carbine as a practical field gun, I decided to mount an optic to the top rail. Keeping in mind that this is not a long distance gun, I settled on a fixed 4x Weaver riflescope. I mounted the glass and zeroed it in for 100 yards.

The SU-16CA arrived from the factory with a threaded barrel with a thread protector screwed in place. As you can imagine, this light carbine has a good bit of bark to it. Recoil is not bad, but I felt the gun could be improved with the addition of a muzzle brake.

To the Brownells catalog I went. They offer a number of muzzle brakes for the 5.56/.223 barrel. I decided to

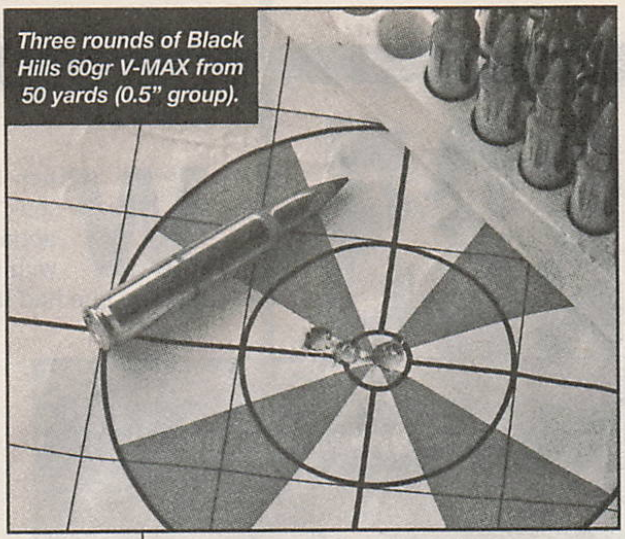
test out two different brakes on the gun. The first one was an A-2 "Bird Cage"-style tactical muzzle brake from Wilson Combat. The second was a unique looking unit simply called the military rifle muzzle brake from FA Enterprises.

As a hunting gun, I would want to add some type of camouflage pattern to break up the solid black color. However, keeping in mind that a compact "sporter" such as this can be used winter, summer, spring, and fall, I didn't want a single, permanent pattern.

A simple and inexpensive way to cover the gun for a given season or terrain was found in Camo Form. Camo Form is a self-clinging camouflage wrap for firearms or any other field accessories. The Camo Form works similarly to camouflage tape by masking the outline and color of the gun.

However, Camo Form is not tape. It is a natural latex wrap that clings to itself. The wrap has elastic properties and stretches a bit to conform to the surface being covered. Camo Form can be reapplied and reused several times. If it gets dirty, it can be washed, dried, and reapplied. Another plus for Camo Form is that, unlike tape that gets slippery when wet, the latex actually provides a more secure grip. The Camo Form also adds a margin of protection against dings and scratches.

I actually began this review in late winter when there was about a foot of snow on the ground. The Kel-Tec carbine was masked in winter Camo Form. In early spring I hunt over fields covered in dead brown grass. The digital desert pattern gave me a brown option. Naturally Camo Form offers several foliage green options. The green one featured herein is a woodland pattern.



Three rounds of Black Hills 60gr V-MAX from 50 yards (0.5" group).

The CorBon 53gr DPX into a ground hog target from 100 yards.

Range Time

With the Weaver scope mounted I headed out to my favorite range to zero the glass in. From a supported prone position I first rough sighted it at 50 yards on a black and white "Dirty Bird" target from Birchwood Casey. With that done, I moved back to 75 yards.

PERFORMANCE
KEL-TEC SU-16CA .223

Load	Velocity	Accuracy
Black Hills 60 V-MAX	2798	0.75
CorBon 53 DPX	2906	0.83
Extreme Shock 62	2785	1.00

Bullet weight measured in grains, velocity measured in feet per second (fps) by Shooting Chrony F1, and accuracy measured in inches for 5-shot groups from 75 yards.

(Above) The Stealth Cam records game movement in your favorite hunting spot.

Why 75 yards? For the last several years I have been recording my varmint hunting stats to include the distances I took my shots from. After compiling the statistics, I discovered that my average shot was taken between 50 and 75 yards. Some were farther and many more were taken at less than 50 yards. The Kel-Tec SU-16CA is not a 300-yard prairie dog gun, and is at its best at medium distances. For game the size of a coyote or the smaller ground hog, I felt confident with my decision.

Shot taken with the author's Stealth Cam.

Test ammunition for this review included .223 loads from Black Hills, CorBon, and Extreme Shock Ammunition. I've put hundreds of rounds through it using the 10-shot factory magazines and larger capacity aftermarket versions. I've come to appreciate the gun as reliable and accurate.

Extras

An "All Season Sporter" review is about more than just a gun and ammunition; I used a number of useful accessories as well. Any time you step out to the range or the field you should have some type of multi-tool with you. Many readers may remember several years ago when Spyderco introduced their

innovative "SpydeRench," which has since been discontinued.

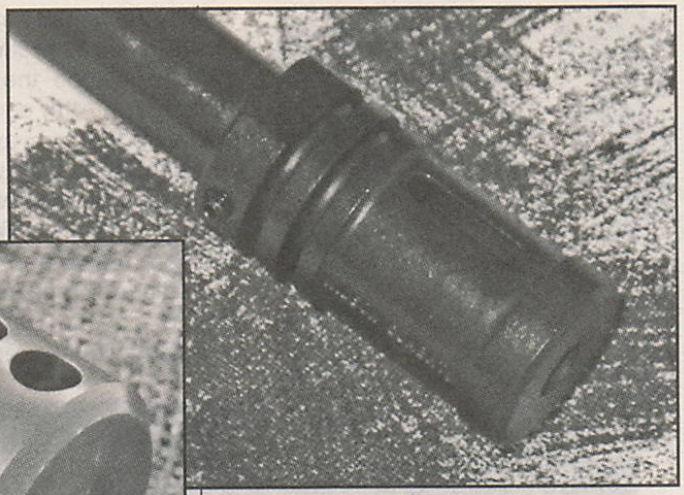
At this year's SHOT Show I got a hold of the latest incarnation of that design. A short time ago Spyderco launched their "Byrd" line of knives and products. The Byrd series is made overseas to keep the cost down while still providing a quality tool. The new line has given birth to the ByrdRench. This tool has a folding knife, pliers with a large or small bite and a 9/16-of-an-inch crescent wrench on the opposite end. The tool accepts Allen and Torx bits as well as the Phillips and flat-head screwdriver bits that come with it. A round file is also included. Blade steel is 8Cr13MoV and the components are stainless steel.

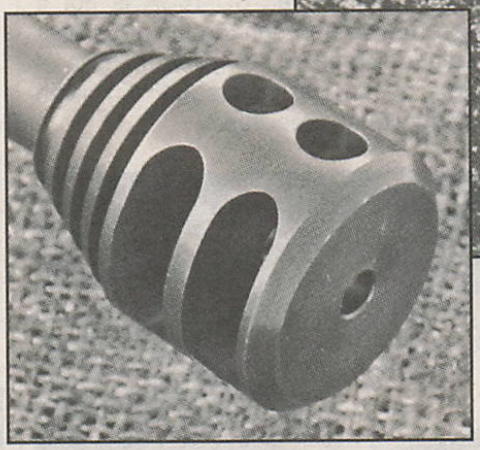
This last fall I picked up a "Stealth Cam" motion-activated outdoor camera. The wonders of modern digital image technology allow us to discover exactly what creatures are creeping around our favorite hunting spot or even our backyard. The particular Stealth Cam model I had was their I230IR for "Infrared." The unit shoots 2.0 megapixel black and white digital images. It can store up to 160 images on its built-in hard drive.

This battery operated camera is watertight to protect it from rain and snow, and it comes with a long nylon strap to secure it around a tree or the like. Each image is date and time stamped, and you can select 1 to 3 burst photos or 10-second video clips.

The Wilson Combat "bird cage" style muzzle brake on the SU-16CA.

A gas-taming muzzle brake from FA Enterprises found in the Brownells catalog.





The hunting clothes I wore this fall and winter came from Outfitter Tuff. These are the Trebark pattern made famous by Jim Crumley. I found all the Outfitter Tuff clothes; tops, bottoms, and jackets, to be first rate out in the field.

Final Notes

Among the Kel-Tec line of 5.56mm carbines I would say that the CA version is the most adaptable for sporting use in addition to personal defense. Its rifle stock is more "sporting" than the skele-

VANG COMP SYSTEMS

TACTICAL SHOTGUNS

Vang Comp Systems is the supplier of choice for many federal, state, county and city law enforcement agencies. We are known for our fair, honest and ethical way of doing business.

Our barrels will produce tighter buckshot patterns with reduced felt recoil and muzzle jump. Our barrels will also handle slugs and all specialty shells interchangeably.

We can modify your Remington or Mossberg shotguns and barrels or build you a new shotgun with a variety of sight options and accessories.

We manufacture our own line of superior tactical shotgun accessories including oversize safeties, magazine extension tubes and followers.

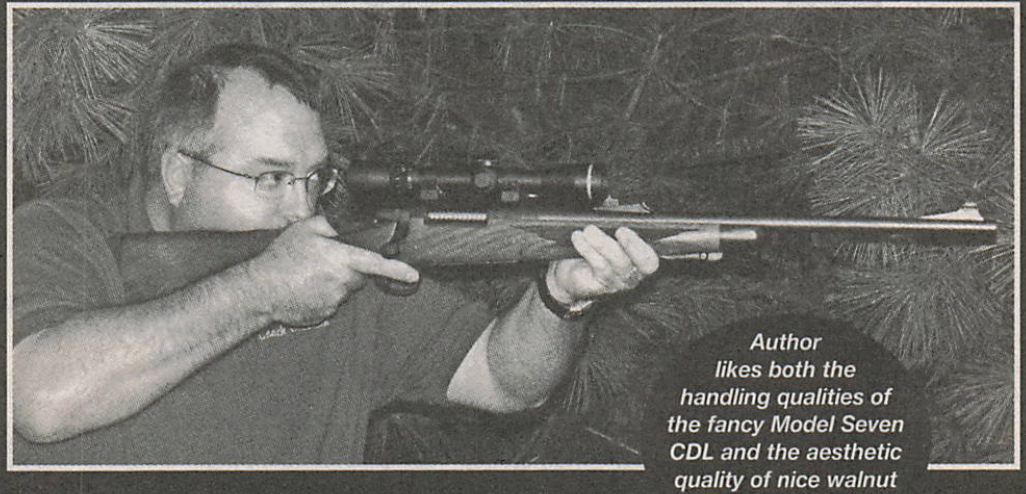
Remington Model Seven CDL .350Mag and 200gr factory loads, join longtime woods-loafing tools Goodwin likes to carry including a Ruger "Liberty Model" Super Blackhawk, Cold Steel Master Hunter and a SureFire M3 Combat light.



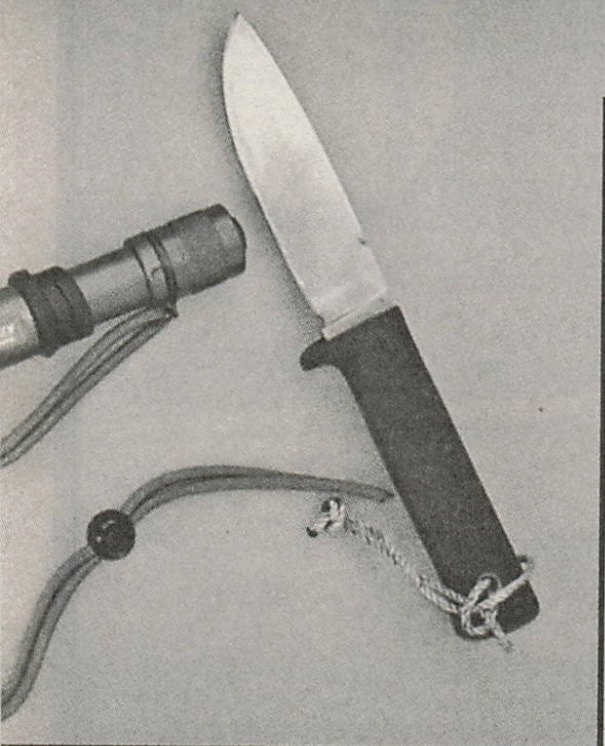
Author likes both the handling qualities of the fancy Model Seven CDL and the aesthetic quality of nice walnut and satin blue steel.

Purists may whine about 1.25 MOA group, but Goodwin believes that accuracy is sufficient to put meat on table out to 300 yards or more.

GUN TEST

REMINGTON MODEL SEVEN CDL .350 REM MAG

All-American carbine is quick into action with a big bore punch!



By Dan Goodwin

It only took about 40 years or so, but I've finally laid hands on a light, handy Remington bolt gun in the proprietary .350 Remington Magnum caliber.

I was 6 the first time I saw one of Big Green's ads for the new .350 in its equally new Model 600. To say I was enthralled by its rakish looks and claims of power is an understatement. I dreamed of someday getting one and going after really big game out West when I grew up. Problem was the 600's laminate stock, racy 18.5-inch vent rib barrel and dog-leg bolt apparently didn't trip enough triggers for it to become a marketing coup. Also, despite its short magnum name, the round produced velocities well south of the magic 3,000 feet per second (fps) mark.

While a 200- to 250-grain bullet, .358-caliber bullet sailing along at Mach II+ will kill anything that walks on earth, gunscribes and rifle loonies of the '60s deemed the .350 Remington a "brush cartridge" and that darned near killed it. The gaudy little powerhouses, however, predictably became cult classics when Remington stopped producing them and the slightly less space-age Model 660s.

Remington resurrected a nice, updated iteration called the 673 Guide Gun a few years back, and while it addressed many of the qualms voiced by early detractors, it didn't really light my fire. Apparently not too many others went wild either as it no longer appears in Big Green's catalog.

Now, four brief decades later, Remington has introduced a short-coupled .350 Magnum, which does make my heart go pitty-pat and ought to appeal to many other hunters as well.

At 12 years old, Connor Goodwin has been shooting a 12 GA trap gun for three years. Unafraid of recoil as a result, he used the Model Seven .350 Rem Mag to take his first deer in the fall of 2006.

Gun Details

What they've done is drop a satin-finished Model Seven action, barreled with a 20-inch Magnum contoured and iron sight-equipped barrel into a very attractive walnut stock with a black fore-end tip and called it the Model Seven CDL. I call it American Medium Bore Perfection.

More than anything else, this little .350 Magnum looks like a short, mean version of my good ol' Remington Model 700 Mountain

Rifle in .270. That slim, pretty rifle is the pluperfect deer hammer, and I have killed a truckload or two of whitetail and one pan-sized antelope with its 6.8mm bullets in the nearly 20 years since I got it.

But there's something to be said for a 9mm rifle, too. Twice in recent years I've shot whitetails that had been hit by other hunters. The latest one had been zapped through the backstraps above the spine with some sort of small caliber rifle. A small chunk of vertebrae was sheared off. The deer had obviously been stunned and dropped, then run off while the hunter was halfway down a tree, or patting himself on the back.

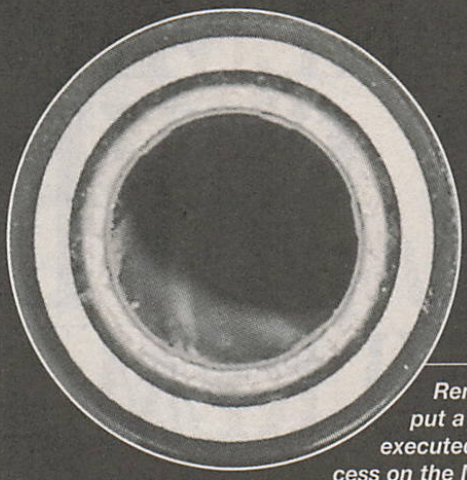
I'm convinced the bigger diameter of a .358 or .458 round would have cut the spine. Yes, a marginal shot can be helped by increased bullet size only infrequently, but I also feel the "slap effect" this .350 would provide might grass a game animal more quickly. That could certainly be an advantage in today's crowded game units. In the final analysis, a .358 bore may not be necessary for clean kills, but this is America and any centerfire caliber is now legal in my state.

While the Model Seven CDL comes with a perfectly fine set of iron sights (the .350 is the only caliber that comes with them, by the way), most hunters these days choose to put an optic on their hunting rifles. I mounted a scope I think outstanding for both dark, deep woods and open range: a Leupold VX-III 1.75-6x32mm. This particular scope was specifically selected because of its thick, German No. 1 reticle. I find this post reticle bold enough to stand out in all but the darkest brush conditions; while the nice sharp tip provides a fine enough aiming point for any big game assignment, it is extremely fast for snapshots.

Should I decide to purchase this .350, I'll probably replace the iron sights with XS Express Sights. I've used a set of Big Dot Tritium Express sights on my former narcotics shotgun for nearly a decade and they are fast!

Range Time

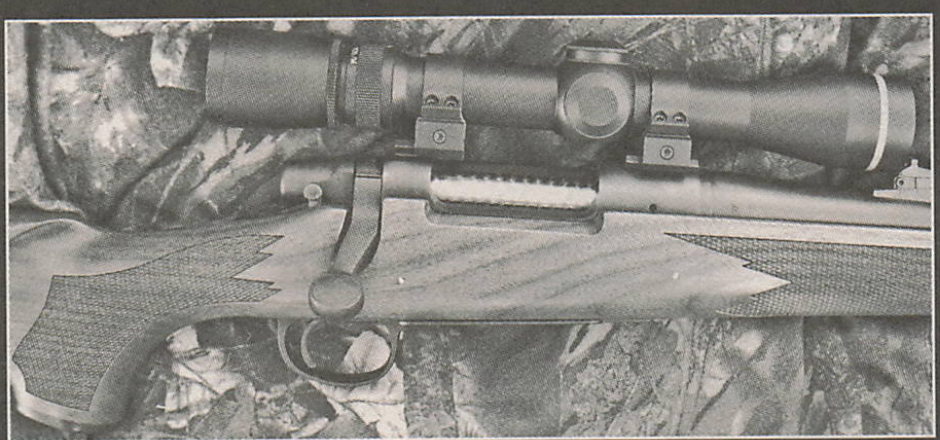
Load selection was really quite easy; there's currently only one factory load: the Remington Express 200-grain Core-Lokt PSP (R350M1). For day in and out use on medium North American herbivores, there's not much moss gathering on the 200-grain Remington Core-Lokt load.



Remington put a well-executed recess on the Model Seven CDL's muzzle, which doubtless helps produce those 1.25 MOA groups.

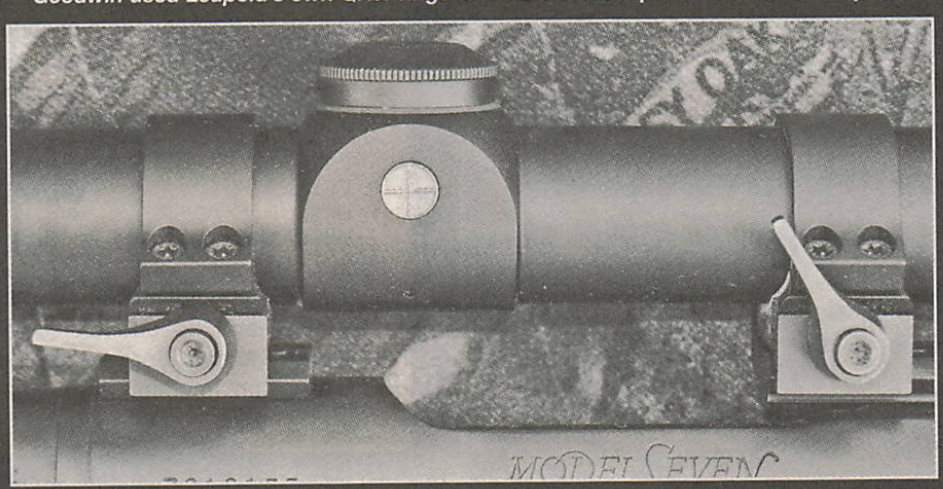
Goodwin prefers to leave variables set on low end of power ring. In thick eastern woods, 1.75x is plenty of magnification.

Factory iron sights included on Model Seven CDL .350 Rem Mag included nice bright white dot on front post.



If Remington's marketing gurus could use a time machine to transport today's gorgeous Model Seven CDL .350 back to 1965 to replace Model 600, the first big bore super short magnum would have changed firearms history.

Goodwin used Leupold's own QRW rings to mount the low-powered variable he prefers.



Handloaders can concoct a variety of different loads for specific missions; everything from .358-caliber pistol bullets loaded light for plinking and small game, up to heavyweights that would knock over a medium-sized elephant. If I were going to go after elk and moose with this carbine on a regular basis, it would be with a handload built around a 225-grain Barnes Triple Shock X-bullet.

Factory specs call for load R350M1 moving out at 2,775 fps, but I was sure the 20-inch barrel would provide just a tad less than that. The PACT Professional Chronograph XP verified the Model 7 CDL wasn't churning up quite the claimed velocities. What was nice was that the rifle produced an average velocity of 2,713 fps, just 62 fps off the factory specs.

Using the PACT's handy BDC feature, I plotted a trajectory table from 50 to 300 yards with a 200-yard zero. The computer says it will drop this load 10 inches low at a distance of three football fields away, which is as far as I might care to shoot. That's as flat shooting as many .308 loads, the difference being the much bigger hole it cuts when it hits flesh.

By the way, that R3 recoil pad does make this little rascal very comfortable to shoot from the bench and offhand, reportedly a major shortcoming of original Model 600s. I am fairly recoil tolerant, and the Model Seven CDL felt like shooting a 20 gauge field load offhand to me.

I was curious to see how tightly this gorgeous little carbine would plant those chunky slugs at 100 yards. While I didn't expect varmint accuracy, it was quite rewarding when the truncated bolt gun plunked three down in a nice 1.25 MOA group with the Leupold's coarse reticle. With a higher magnification scope and thinner reticle, tailored handloads and/or a better shootist behind it, this rifle could easily break 1 MOA. Many grind their teeth if a rifle doesn't plant all its shots into 1 MOA at

CUSTOM CONFIDENCE

Rock River Arms knows that you may only get one shot. Make it count with your own Custom Tactical 1911. Built to *your* exact specifications, rest assured that your 1911 will deliver time and time again.

Tactical 1911-A1
Integral light rail
RRA Bar Stock frame
Checkered front strap
Forged NM 5-in. slide with double serrations
Throated NM KART barrel with NM bushing
Match Commander hammer & match sear
Aluminum speed trigger - 3.5 lb pull
Beavertail grip safety
Flat mainspring housing
Tactical mag catch and safety
Standard recoil system
Totally dehorned for carry
Accurized to shoot 2.5-in. groups at 50 yds.

Shown with optional Black "T" Finish and Super Rosewood grips

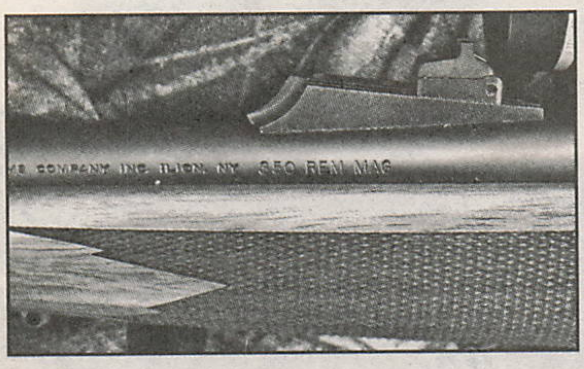
The Remington's nice walnut and checkering is visible here too, as is ultra comfy R3 recoil pad.

In this day when stainless steel and synthetic stocks are the rage, the Remington Model Seven CDL offers well figured walnut and nice checkering.

Note the well-executed checkering on the nicely figured walnut fore-end.



100 yards, but the fact is 1.25 MOA is more than adequate for hunting any suitable game at any reasonable range.

I used up another box of ammo, doing hunting drills from offhand and field expedient rests firing on an MGM IPSC rifle target at ranges from 100 to 200 yards and didn't experience a single miss. This snub-nosed .350 Magnum could hunt and did, but not with yours truly behind it.

A Boy's Rifle

It's still nearly a month until Tennessee's general rifle season for deer opens, but my youngest son Connor took part in the state's Young Sportsman hunt on October 28, 2006, and got his first deer.

Many people are happy the state's .24-caliber minimum law changed to allow "any centerfire cartridge" this year. That way they can start their children hunting with .22 centerfires or even smaller blasters. Connor and I went the other direction, however.

Since the boy shoots 100 trap loads a week practicing for his middle school Scholastic Clay Target Program team, I figure he is about as recoil-proof a kid as you'll find. He'd also been training all summer with a scoped .22 rimfire rifle, firing from a tree-stand, field expedient and offhand positions. Hundreds of rounds were smacked into that MGM rifle target during this period, including many that were snapshots fired against a PACT Club Timer set on random. A whole bunch of those snapshots were made while walking, and pivoting either left or right to engage the target.

After sitting on a cold stand for nearly three hours on opening day, we decided to head in from grandpa's woods. Coming into the field near the family rifle range I told Connor to stay sharp as we sometimes jumped a bedded whitetail right there amongst the honeysuckle and briars. About 30 yards after telling him that, I saw brown in my peripheral vision and a doe jumped to her feet. I slapped Connor's chest and whispered, "Pivot left and kill the deer behind us."

Since he's not a teenager, he followed instructions quickly and precisely, and his first deer was stone dead less than 2 seconds after I spoke. Jeff Cooper probably smiled up in heaven, the 32-yard snapshot went so smooth and quick. As expected, the fat .358-caliber softpoint slapped the little doe down like the Hammer of Thor.

Reckon other gunwriters and many readers will flip if I dare suggest a Remington .350 Magnum is an ideal youth hunting rifle? Probably, things haven't changed that much since 1965. Just don't try to tell Connor it kicks too hard for a kid, he's already talking about grassing an elk with it next fall.

Final Notes

While another major player in bolt-action hunting rifles recently shut its doors, Big Green is still rolling strong. The CDL version of its choice line of Model Sevens will appeal to many traditional hunters who, like me, have longed for a blue steel and walnut Remington .350 Magnum for two generations.

It's time for all .35-caliber rifle aficionados to put their money where their mouths are.

GUN TEST

RUGER® MINI-14 TARGET .223

By Walt Rauch

The new Ruger Mini-14 Target Model Ranch rifle with a Burris Landmark spotting scope (top) and TruGlo Infinity target scope mounted on the rifle.

Target results at 100 yards. When we did our part, we had 1" 5-shot groups. (Shown with the Burris Signature Select target scope.)

John Lysak supplied some of the good 100-yard groups.

When I read that Ruger had revamped the Mini-14 rifle after shutting down its manufacture for months while they removed the old, worn-out equipment and replaced it with new, state-of-the-art machines, I was interested in getting one for T&E. But when I read that the new version was capable of 2-inch groups at 100 yards "with suitable ammunition," I became even more so. Then came the announcement of a target version with promised groups of 1-inch at 100 yards, and I put in my request, which was soon fulfilled.

Gun Details

Chambered for the .223 cartridge, the heavyweight, hammer forged, matte stainless steel target barrel features a recessed target crown and an adjustable barrel weight, so that you can get the best accuracy from whatever ammunition you're using.

The Mini-14 Target has a black laminated target stock and a wide, flat fore-end for easy holding or resting on sandbags. There's a butt hook for securing the rifle against your shoulder with your non-shooting hand while benchresting it and a high comb for comfortable use with precision telescopic sights. The non-slip, grooved rubber buttpad comes with three spacers to change the length of pull by up to 1.5 inches. Patented Ruger scope bases are machined directly into the receiver, a patented recoil buffer protects the scope reticle from damage and the side ejection of cartridge cases means they easily clear

the lowest-mounted scope. The Mini-14 Target comes with a 5-round magazine. A harmonic dampener and barrel weight are also part of the package.

Range Time

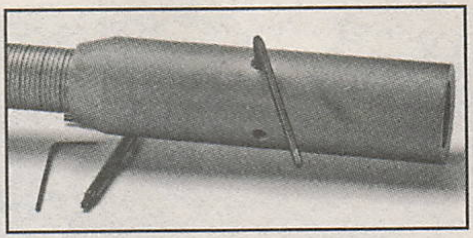
John Lysak and I managed a day of shooting at a distant location, which had a 100-yard range. (My regular shoot spot has only a 50-yard range with a 100-yard range under construction, and I already knew what any Mini-14 would probably do at 50 yards.)

Prior to the range work, I broke the rifle down and lubricated the appropriate contact points with Shooters' Choice All-Weather grease. I had learned to do so with my high power rifles, adding a few drops of Mobil 1 5W30 motor oil to pivot points. The Ruger instruction booklet says the only lubrication the Mini-14 needs is light oil, but old habits die hard.

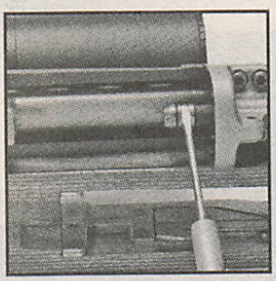
Since the Mini-14 Target comes without iron sights (and no provision for installing them) but is supplied with Ruger scope rings, I mounted a TruGlo 4 to 16x Infinity Target and Varmint target scope (which I'd won in a raffle). I also gathered up a selection of .223 ammo from Hornady, Black Hills, Winchester, Remington and CorBon, with bullet weights ranging from 40 to 75 grains. I also kitted myself out with a Burris Landmark 20 to 60x spotting scope and a nice gun roll rest designed by my friend and fellow gun writer Paul Markel.

I started off with some Remington 55-grain loads with encouraging results, but not the "five-in-one-at-100" I was looking for. I then dropped down in bullet weight to some CorBon 40-grain JHP but these didn't improve matters, so I went the other way with Black Hills 69-grain Match King BTHP factory new ammunition. This worked, almost, giving me a 1.25 inch group. Then I tried Winchester's Supreme Match 69-grain Hollow Point Boattail bullets for a 1.00-inch group. At that point, I thought that if I finessed the clean-breaking 5-pound trigger more and better managed my breathing, I'd hit the goal, but the next two tries by John and me gave us larger groups.

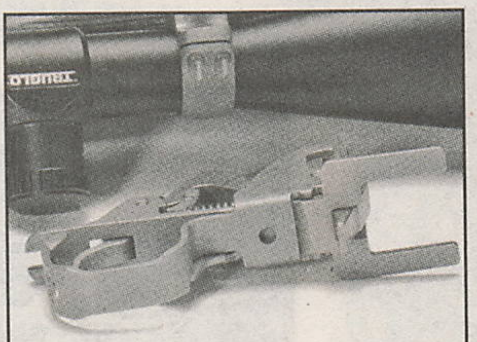
I asked John to check the dampener for tightness while I checked other screws. Sure enough, the dampener was loose. The instruction book mentions periodically checking the harmonic dampener after every 100 rounds.



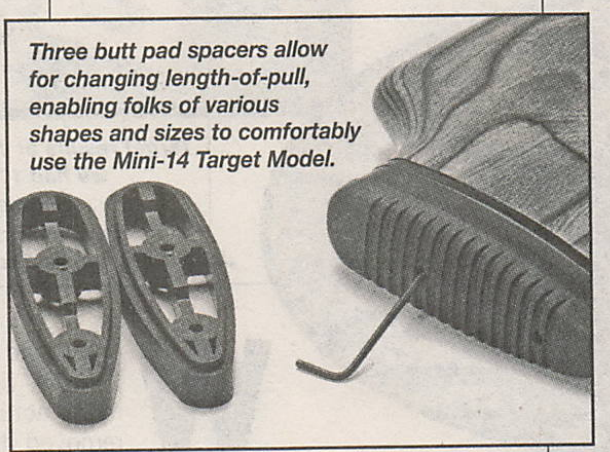
Harmonic damper minimizes barrel vibration, which adds to bullet stability in flight.



Screwdriver points to Ruger's gas system orifice.



Fire control group removed for cleaning.



Three butt pad spacers allow for changing length-of-pull, enabling folks of various shapes and sizes to comfortably use the Mini-14 Target Model.

Fortunately, I had remembered to bring along the proper Ruger-supplied wrench.

Now, both of us hit the mandated number using heavy bullets from CorBon, Remington, Winchester, Black Hills and Hornady's 75-grain stuff. This particular rifle seems to like the heavier bullets, but I wanted to go back to the lighter bullets for a final effort with them. John took over and while spotting I noticed there was a fair amount of debris now blowing around the formerly-still backstop. In our concentration on shooting and screw tightening, we failed to notice the advancing storm's progress, which now was no longer approaching from a distance, it was upon us! With a drop in temperature and the wind picking up, we were both now cold. Not pleasant shooting weather and, more important, shivering is not at all conducive to good accuracy work.

Taking note of all this, John inserted a magazine loaded with Hornady 75-grain BTHP Match rounds and fired them off into a group I had already shot with the Winchester match ammunition. He shot these in rapid cadence and his non-traditional group shooting effort only slightly expanded my downrange effort, a very nice finale.

I didn't get to explore some other questions I had such as was there any effect on group size and point-of-impact with and without the harmonic dampener installed and how does moving this device affect performance? Ruger provides annular rings scribed on the barrel to more precisely do this activity.

To answer the first question, I later used my home club's 50-yard range and mounted a Burris 6x24 Signature Select target scope. This time I had more help. Mike Wakeley and Bruce Cohen were also on the range and John came a bit later. They were most gracious in going along with me tying up the range by firing from 50 yards, as the range uses a common firing line with but one backstop.

With the dampener on or off and now using all bullet weights—including the lighter ones we had found not to be top performers at 100 yards—all of us shot similarly sized groups running 1.25 inches. With all this eager help, though, I did re-discover one more thing. With this rifle, a hot barrel drops the point of impact about 2 inches at 50 yards. In everyone's eagerness to shoot, we sort of forgot that a cool barrel equals better groups.

PERFORMANCE
RUGER MINI-14 TARGET .223

Load	5-Shot	4-Shot
Black Hills 69 Match King BTHP	1.25	1.00
CorBon 69 BTHP	1.25	1.00
Remington Premier Match 69 Match King BTHP	1.25	1.00
Winchester Supreme Match 69 BTHP	1.00	---
Hornady 75 BTHP Match (fired over Winchester)	Total group 2.25	

Bullet weight measured in grains, and accuracy in inches from a soft gun rest at 100 yards. Temperatures ranged from 43 to 56 degrees Fahrenheit with overcast sky and wind speeds of 5 to 35 miles per hour.

The 5-shot mag fits flush in its well. The manual safety is in front of the triggerguard.

SPECIFICATIONS

Capacity: 5-shot mag • **Price:** $995*
(Manufacturer's Suggested Retail Price)

The second question, what effect on group size is achieved by repositioning the harmonic dampener, is to me something to be done at leisure over a long period of time, for the weight can be moved both vertically and circularly on the barrel axis, creating an almost infinite number of positions for the device. I'll leave this experiment to someone having more patience and time and perhaps of an age to live long enough to accomplish every permutation for every bullet weight and powder charge!

Final Notes

Was there anything I disliked or would want to have different? I'm not a fan of thumbhole stocks, so I would, if I were to keep this rifle, either open up the stock and gamble I'd not break it with a pistol grip hanging out or wait for someone to come up with a more open stock. Ruger now offers a Hogue overmolded stock.

I'd also like to be able to install iron sights, although I admit this is more nostalgic than practical. Now I simply see much better with scopes on most any rifle. Ideally, I'd want the new standard version of the Mini-14 with the accuracy of the Mini-14 Target Rifle. I'll have to try out the standard version to see if it might just be as accurate a shooter as well.

One item I did not get to verify was the patented recoil buffer, which is a piston held in the receiver by a crosspin and against which bears the recoil spring guide. The configuration and weight of the rifle certainly has moderate recoil. Also, to determine this device's efficacy, two rifles, identical save for the presence, or not, of this device would be required. I'll just have to take Ruger's word for it and why not? Ruger promised and delivered on its claim of "minute-of-angle" groups.

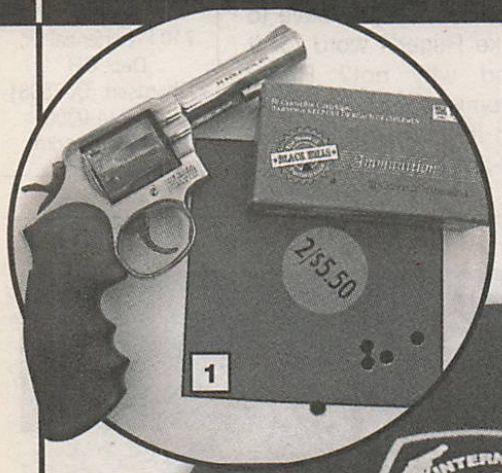
GUN TEST

Smith & Wesson M&P- Past, Present, Future

Old school M10 .38SPL meets the new guy—M&P 9mm!

By Mike Boyle



1

2

(1) Melonite finish of the M&P pistol is extremely resistant to corrosion and is ideal for officers working in marine environments. Companion knife is a Spyderco Tasman Salt.

(2) Winchester 127gr +P+ hollowpoints delivered consistent accuracy at 25 yards. This law enforcement-only round takes a 9mm pistol like the M&P to a whole new level of performance.

Left (1) Mild-mannered 148gr wadcutters from Black Hills shot fairly tight groups at 25 yards.

(2) Ready for duty: S&W M10 and Spyderco Scorpius folder.

(3) Federal 158gr +P LSWC-HPs shot to point of aim at 25 yards. This load was highly regarded when revolvers ruled and would still do the trick today.

In the not so distant past, S&W dominated the law enforcement market with their line of medium size K-frame revolvers. The most popular of the breed was the Military & Police, a fixed sight .38 Special revolver that remains in production to this very day. As revolvers gave way to autoloaders, S&W's market share began to shrink. Although Smith did, in fact, market a line of pistols, competitive designs from European manufacturers were attracting most of the attention. In relatively short order, S&W had fallen from king of the hill, to just another player.

But now, S&W has come out with a totally new pistol that they feel can compete with anything else out there. Borrowing the name from their most successful revolver, the new M&P is a pretty slick design. While the M&P is not Smith's first attempt to build a striker-fired, polymer frame pistol, it's by far the best. In my humble estimation, the M&P pistol could fill the exact same niche its namesake revolver occupied a generation ago.

I thought it might be interesting to take a look at the M&P concept, both past and present, to see how far we have come. Sure, it's apples and oranges but I, for one, was curious to see how the 9mm M&P stacked up against my M&P revolver. The results just may surprise you.

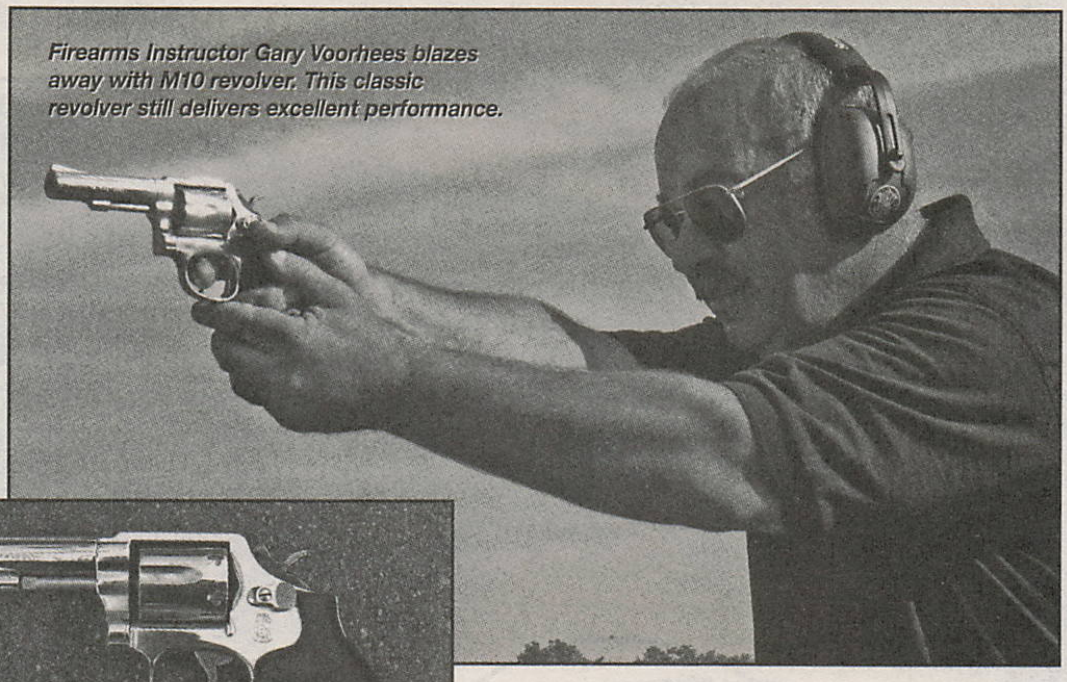
Past M&P Details

The M&P model was introduced in 1899 and represented a significant milestone in the evolution of the double-action revolver. Originally designed for the standard military cartridge, the .38 LC, S&W decided instead to chamber it for the new, more powerful .38 Special cartridge as well as the .32-20. The combination of the .38 Special cartridge and the M&P revolver has remained an unqualified success for over 100 years.

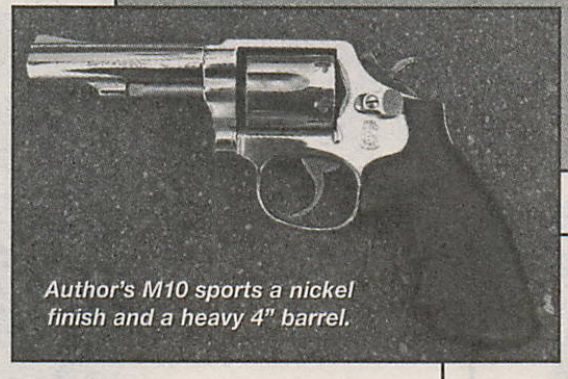
It's probably safe to say that the M&P revolver is the most prolific handgun ever produced by S&W. Specimens in 2, 3, 4, 5, 6 and 6.5-inch barrel lengths have been produced. The original tapered barrel was the standard for years, but in the late 1950s, heavy barrel M&Ps appeared on the scene. Models were available with square or round butts, in either a blue or nickel finish. Later, a stainless steel version was introduced.

In 1957, S&W began identifying revolvers by a number rather than a name. Since then, this workhorse revolver has become the Model 10 M&P.

The K-frame M&P revolver has served as the starting point for any number of other successful designs. Add a set of adjustable sights and it became the Model 15 Combat Masterpiece. Swap off the steel frame for aluminum alloy and it was transformed into the Model 12 Airweight. When chambered in a .357 Magnum, it morphed into the Model 13, the last service revolver issued by the FBI. Rendering this classic in stainless steel brought on even more possibilities.



Firearms Instructor Gary Voorhees blazes away with M10 revolver. This classic revolver still delivers excellent performance.



Author's M10 sports a nickel finish and a heavy 4" barrel.

My current M&P revolver was made in 1982 and features a heavy barrel and nickel finish. Other than a set of Hogue rubber grips, it is an entirely stock gun. I often use this M10 as a training aid when instructing new shooters. It may appear a bit dated when compared to some of the autoloading technology issued to the police recruits; however, on-target performance has yet to take a back seat.

More than a century after its introduction, S&W's M&P revolver remains in service. In the nation's largest city, I frequently encounter police officers who've declined the opportunity to carry an autopistol and instead, remain true to their M10s. The M10 and its variants are still widely used by large numbers of armed security professionals. As they say, good taste never goes out of style.

The M10 along with Safariland Custom Fit holster is often used as a training aid. This combo can hold its own against most pistols, at least for the first 6 shots.

Present M&P Details

Several years in the making, the new M&P pistol can indeed run with the big dogs. S&W has their ear to the ground and has incorporated many features required of a first-rate combat pistol.

First, let's consider the trigger. Double-action-only triggers came into vogue in the early 1990s and generated quite a stir among police agencies. It was often felt that the DAOs with a long, heavy pull throughout the entire firing cycle might be the better tool for equipping large numbers of people with pistols. The manual of arms for the DAO was also simpler than DA/SA or SA pistols. To some, the DAO represented the ultimate solution. Safety was enhanced and the learning curve wasn't quite as steep as with other systems.

A decade and a half later, there has been a definite shift. All the major manufacturers now offer pistols with short, relatively light trigger pulls. Some examples include the SIG SAUER DAK, Heckler & Koch LEM, Springfield Armory USA, Para-Ordnance LDA and the GLOCK Safe Action. Mechanically, these systems are quite different and whatever we label them, the bottom line is the shooter of average ability can shoot them to a far higher standard than a conventional DAO.

The trigger of the new S&W is indeed very user friendly. On

PERFORMANCE
SMITH & WESSON

Load	Velocity	Accuracy
M10 .38 Special		
Black Hills 148 WC	687	2.25
Federal 158 +P LSW-HP	888	1.88
Hornady 158 JHP	721	2.50
Remington Golden Saber 125 JHP	1020	2.75
M&P 9mm		
Black Hills 147 JHP	980	3.75
CorBon DPX 115 HP	1323	3.25
Federal XM 9001 115 HP	1241	2.63
Win Ranger JXT 127 +P+ JHP	1226	1.25

Bullet weight measured in grains, velocity in feet per second (fps) by Oehler 35P Chronograph, and accuracy in inches for 5-shot groups from a rest at 25 yards.

my 9mm sample, the trigger broke cleanly at a shade over 6.5 pounds. Travel distance from rest to fire is 0.300 of an inch and reset distance is only 0.140 of an inch. In short, this enables the shooter to place fast, accurate hits.

In building the M&P, S&W uses a stainless steel barrel and slide with a receiver of Zytel polymer. Metal surfaces are coated with black Melonite, which has proven highly resistant to wear and corrosion. Serrations on the rear of the slide provide a positive grasping surface for manipulation.

Like many contemporary pistols, the M&P sports an accessory rail molded into the dust cover of the receiver. This allows for the easy mounting of lights and laser aimers. I used lights from SureFire, Streamlight, and Insight Technology, all of which enhance the capability of my pistol when in low light.

The one feature that sets the M&P apart from most of the competitors is the ability to change the grip circumference to match hand size. Three interchangeable backstraps are included with the M&P and potential users will no doubt find one ideally suited to their hand.

S&W M10 M&P revolver (left) is the granddaddy of M19 Combat Magnum (bottom), the M12 Airweight (middle), and the unique M547 9mm revolver (top).

More often than not, the grip dimensions of high capacity pistols are incompatible with smaller hands. As a result, performance suffers in a big way. With the interchangeable backstraps, S&W has come up with the perfect fix. Grip dimensions can be changed in very short order. When equipping large numbers of people with a single type of handgun, interchangeable backstraps make tremendous sense.

Sights consist of a Novak Lo-Mount carry rear and steel ramp front dovetailed to the slide. Sights are highlighted by a trio of white dots. Tritium night sights are available as an option. Users who prefer something a little different should have no trouble fitting aftermarket sights to the M&P slide.

With an empty magazine in place, the 9mm M&P registered 27.5 ounces on the electronic postal scale. This is slightly lighter than my 4-inch M10 revolver, but a full complement of 18 rounds pretty much levels the playing field. When you consider the 300% increase in total capacity, this is more than a fair tradeoff. The M&P is still light enough for all day carry.

Safety systems on the M&P are passive in nature and one need only bring the trigger to the rear to fire the pistol. Like the 3rd generation metal frame pistols, the M&P has a magazine safety. Without a magazine in place, the pistol will not fire. But all M&Ps are available without this safaty. The M&P also fea-

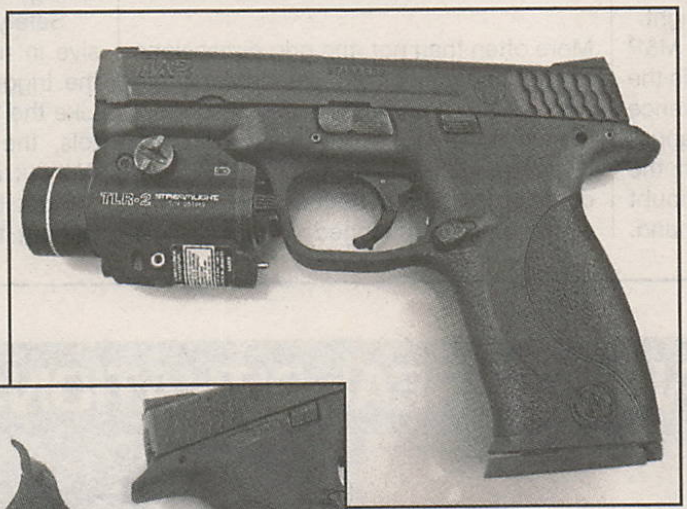
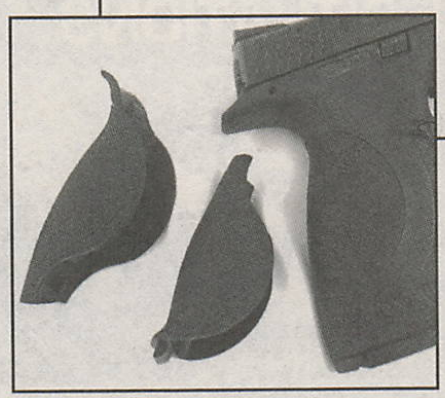
Conservation Officer Anne Paul takes aim with the M&P pistol. Shooters with smaller hands will appreciate optional grips with a smaller backstrap.

tures a loaded chamber indicator and internal lock option. When activated, the internal lock will prevent an unauthorized person from discharging the pistol.

S&W did their homework in designing the M&P pistol. It might be tough to recapture all of yesterday's glory, but I am quite confident that the M&P will carve out a larger market share.





A Streamlight TLR-2 laser/light combo was the perfect match for the M&P pistol.

The M&P pistol comes with three interchangeable backstraps.

How They Shoot

This writer will confess a certain sentimental bias toward double-action revolvers. I realize, however, that the auto-pistol is the far better tool for most defensive applications. With that in mind, a pistol remains my everyday companion.

Although a direct comparison between the performance of the M&P pistol and revolver would be pointless, I thought it just might add some interesting perspective. I doubt if any of my results qualify as true science, but should prove interesting nonetheless.

My first test involved firing 5-shot groups at targets set 25 yards away. Shooting off a table, I was able to post slightly better results with my M10. Federal's 158-grain LSWC-HP+P load averaged a very tight 1.88 inches. The ability to fire the M10 single-action certainly helped my cause. Five-shot clusters with the M&P pistol were slightly larger, but still quite acceptable. With a little more time mastering that trigger, I'm sure group size would shrink a little more.

I also tried my hand firing controlled pairs from a distance of 10 yards. An IPSC target was placed in a frame with the intent to place two hits in the A-zone as quickly as possible. Handguns were held in a ready position with the muzzle slightly depressed and elapsed times were measured with a Competition Electronics Pocket Pro.

Predictably, the M&P pistol was able to deliver faster splits between the shots. Average split time was only 0.22 of a second. With the M10, splits ran 0.27 of a second. Total elapsed time for both pistols averaged less than 0.75 of a second; however, hits with the M&P pistol were better centered.

The need to reload a 6-shot M10 in a gunfight is significantly greater than an 18-shot M&P. Clichés aside, you just can't have enough ammunition when someone is shooting back. One may draw an analogy between beer in the refrigerator and magazine capacity. Most days you'll probably get by with one, maybe two. Occasionally, unexpected visitors arrive and there goes the whole 12-pack! You just never know.

From shot to shot, I can reload the M&P pistol in 2 seconds. With my M10, my very best efforts with Safariland Comp III speedloaders run between 4-5 seconds. Deterioration of fine motor skills makes it unlikely I could replicate this trick when subjected to life-threatening stress.

Ammunition performance heavily favors the M&P pistol. Assuming similar weight bullets, muzzle velocities from the M&P pistol run almost 200 feet per second (fps) faster. This all adds up to greater energy and better on-target performances.

As much as I like my M10, I would have to concede the M&P pistol is the better tool. But, for

users who favor or are restricted to the revolver, the situation is far from hopeless. History illustrates that a good revolver like the M10 can get the job done in all but the most unusual encounter. But that's where the M&P pistol shines.

In addition to the 9mm example reviewed herein, the M&P is also available in .357 SIG, .40 and .45ACP. The M&P Compact is available in 9mm, .357 SIG and .40.

Make no mistake; the M&P pistol represents the future of the S&W centerfire pistol line. Looking into the crystal ball, I see the M&P ultimately replacing most, if not all, of the other S&W polymer and metal frame pistols.

But what about the M&P revolver? This old warhorse has benefited from any number of improvements and after 108 years, it remains in the S&W line. This is a record unlikely to be surpassed by any modern handgun.

Final Notes

Prior to the 1980s, the law enforcement and defensive markets were dominated by two firms. Colt and S&W handguns were utilized pretty much to the exclusion of anything else. Today, a half dozen firms fill that same niche. It is highly unlikely that the new M&P pistol can achieve the popularity of the M&P revolver, but it represents S&W's best shot on recovering some lost turf. This is truly a handgun you can ride the river with.

CUSTOM

The author out in the cold with the Winterlusion ATR 100.

The Mossberg ATR 100 in .308. Winterlusion camouflage by KAT Performance Coatings.

The short-action bolt with dual locking lugs of the ATR 100.

MOSSBERG 100 ATR .308

All Terrain Rifle goes from plain jane to winter warrior!

By Paul Markel

While some may curse the cold weather, for my part I relish it. No, I'm not ready to relocate to Anchorage, but I do appreciate a few months of winter weather. There is something invigorating about bundling up and walking through the woods in freshly fallen snow. Of course, I like to take my woods walks with a rifle in hand.

When I first had a look at the Mossberg 100 ATR (All Terrain Rifle) with its basic matte blue steel and black synthetic stock, one of my initial thoughts was that it was ripe for a custom finishing job.

Gun Details

It has only been a couple of years since Mossberg has gotten back into the centerfire rifle market. In that relatively short time they have introduced several models in both short and long action versions. At the 2007 SHOT Show, the gun maker announced the release of an additional line of centerfire guns. Dubbed the "4x4" series, these rifles are chambered for magnum cartridges such as the 7mm Mag, and both the .300 and .338 Mags.

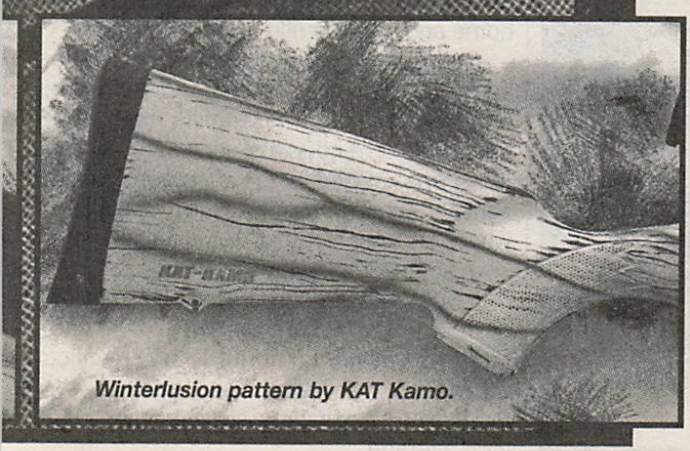
Getting back on track, the subject of this review is the 100 ATR in .308. A stock factory gun, the rifle has a matte blue metal finish and black synthetic stock. The pistol grip and fore-end are checked, and sling mounts are molded into forearm and butt-stock. A rubber recoil pad is added for comfort. The Mossberg Marinecote metal finish is available, as are wooden and factory camouflaged stocks.

Into the black synthetic stock, Mossberg has fitted a short bolt-action with a free-floated barrel. Yes, the medium-weight barrel passed the "dollar bill" free-float test. The top-loading, blind magazine holds 4 rounds total, with one being chambered as the bolt is closed.

Dual-locking lugs hold the stainless bolt closed. A two-position manual safety is found on the right side of the action. A bolt release is found on the left. No sights are included on the gun. However, Mossberg does mount Weaver-style scope bases on each rifle. Rifle/scope combo rifles are available from select distributors.

The feature component of the rifle is, naturally, the barrel. On this rifle the barrel length is 22 inches. Rifling twist is a standard 1-in-10 inches. The muzzle crown is recessed for added consistency. Overall the entire gun is 42 inches. Empty weight is only 7 pounds.

Going with a winter theme, when I decided to have the ATR stock refinished I went to KAT Performance Coatings website. Of their numerous color schemes, the one that really caught my eye for this project was their "Winterlusion." The Winterlusion is white with light



Winterlusion pattern by KAT Kamo.

gray striping blended in. This winter illusion camouflage pattern is very effective.

KAT Kamo patterns are available in almost any natural color you can think of from white winter, to desert tan, to jungle green. If you like a more traditional appearance, KAT can put their "Simwood" simulated wood grain finish onto your polymer stock.

Optics Options

This review was my third opportunity to work with a riflescope from Nikon. As my previous two had been most favorable, I expected the same. The glass I would mount to this rifle would be a Nikon Monarch in 3.3-10x44mm with a 1-inch tube. The objective lens is focus adjustable from 50 yards to infinity. This Monarch scope adds an extra 18.5 ounces to the gun.

Elevation and windage changes on the scope are made with quarter MOA click adjustments. An attractive feature of this model is that under the protective caps the adjustment knobs have a "Hand Turn Grip" so you don't have to use a coin to make your changes. A standard crosshair reticle is used.

In addition to the riflescope I received a new set of Monarch binoculars from Nikon Sport Optics. The binoculars in the Monarch line are a bit larger than "compact" field glasses, but they are certainly small enough for your hunting pack. The model I worked with was 8x42mm and weighed less than 1.5 pounds. The Monarch binoculars have a central focus knob and dark green rubberized armor coat for protection.

Range Time

Developed as a short-action alternative to the granddaddy of rifle cartridges, the .30-06, the .308 cartridge is without a doubt one of the most popular, if not the most popular centerfire round available today. In use by law enforcement, the military, hunters and competition shooters; the .308 is a most versatile round.

While .30 caliber projectiles are available from a light 100-grain to a very heavy 220-grain, the 168-grain bullet is the benchmark for most .308 precision shooting. For this reason I decided to test fire loads with 168-grain bullets. Represented are Black Hills, CorBon, Federal, Remington and Winchester.

With the Nikon scope rough zeroed I headed to the range. My first session would consist of basic chores such as chronographing and dialing in the glass. Starting toward the beginning of the alphabet I zeroed the riflescope with the Black Hills load at 100 yards.

Allowing the barrel to cool for about a minute or so between each shot, I slow fired for accuracy. Groups were respectable, averaging in the 1- to 2-inch range during my initial testing. I would return home and give the rifle a simple cleaning.

During my next range trip I did some additional slow-fire work. Firing from the prone position off of a shooting mat I rested the rifle on a couple of sandbags. By the time I was finished for the afternoon I would achieve some fantastic results, especially when you consider that this is an inexpensive factory stock rifle.

Firing 3-shot groups, the ATR kept all groups below 1.5 inches with MOA and sub-MOA being the norm. To be specific, adding up the group sizes from all six loads and dividing by six we have a 1-inch average.

Test ammunition from Black Hills, CorBon, Federal, Hornady, Remington, and Winchester.

Variable power Monarch riflescope from Nikon.

Nikon's Monarch 3.3-10x44mm riflescope. Note the adjustable objective lens.

PERFORMANCE
MOSSBERG 100 ATR .308

Load	Velocity	Accuracy
Black Hills 168 BTHP Match	2597	0.88
CorBon 168 BTHP Match	2637	1.13
Federal 168 BTHP Gold Medal Match	2586	1.00
Remington 168 BTHP Sierra Matchking	2618	0.75
Winchester 168 BTHP Match	2610	1.00

Bullet weight measured in grains, velocity in feet per second (fps) by Shooting Chrony F1 and accuracy in inches for 3-shot groups from 100 yards.

I would rate the factory trigger on the ATR in the "very good" category. No, it's not match grade but neither is the ATR a $2,000 match rifle. As for the action, it was as smooth and sure as one could expect. No problems were encountered feeding, extracting or ejecting. And yes, every round went "bang."

Extras For Comfort

In addition to my insulated hunting coveralls, I used a couple of other items to stay warm. From BlackHawk's HellStorm line I wore their Cold Weather gloves. The basic cold weather models have HawkTex textured palms for gripping ability. They have a loose fit to accommodate liners. For sub-zero temperatures HellStorm also has Extreme Cold Weather Winter Ops gloves. These are insulated and have cinch straps over the wrists.

I have also been using a HellStorm low-profile, fleece watchcap. The watch-cap keeps your head warm and is thin enough to be worn under a helmet or other headgear. The snow camo cloth poncho featured herein was purchased from the Sportsman's Guide website.

Final Notes

The .308 version of the ATR is the second such rifle that I have had the pleasure to work with. The first was chambered in .270. I will have to say that I have been impressed by both. Checking the Gunbroker website (www.gunbroker.com) I found several of the rifles listed in the $300 range. At prices like that, you could purchase and custom-finish a .308 for the winter game, a .30-06 for western big game, and a .243 for summer varmint hunting.

GUN TEST

HENRY BIG BOY .357 MAG

America's favorite magnum for Cowboyin', ranch, farm, hunting or fun!

By Denis Prisbrey

Big Boy receivers are highly polished solid-topped brass (bronze), with side ejection.

Lever throw is a traditional long 90 degrees.

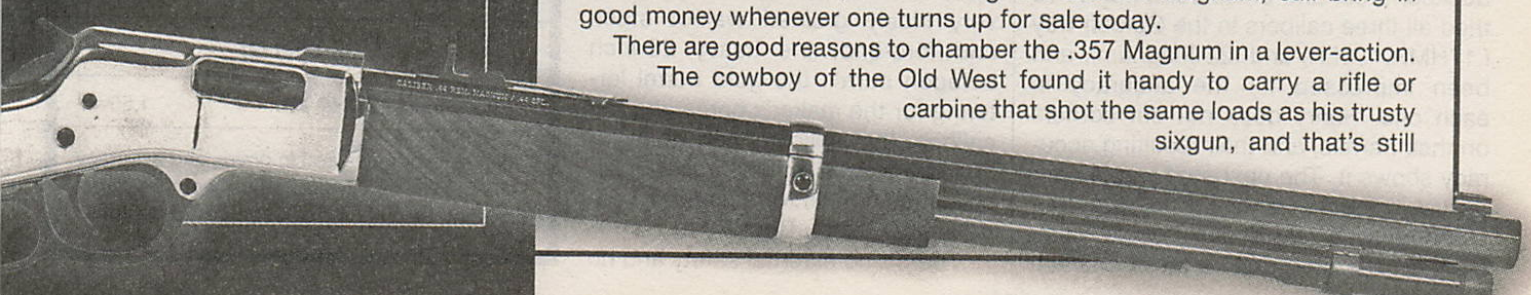
Smooth-faced trigger offered a crisp break; note the trigger block behind it.

Back in 1935, when Smith & Wesson was hard at work on their radical new .357 Magnum caliber in response to demand by police and hunters, the Winchester Model 94 in .30-30 caliber was America's deer rifle. Based on a long line of successful leverguns, the old '94 traded on its predecessors' reputations as dependable and handy long arms for hunting and defense against animals and people, and the uniquely American lever-action type was so firmly entrenched that it was hard going for the upstart bolt-action rifle to achieve widespread acceptance.

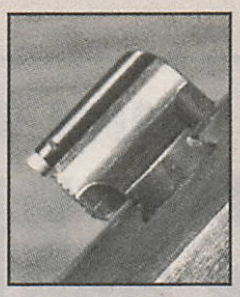
In shorter carbine form, the lever-action was light, quick-handling, reliable, and also very effective in several smaller calibers for small game hunting. Old-timers swore by them, and it wasn't unusual in any sizable deer camp to see a well-worn levergun toted by a veteran hunter right alongside a "kid" of 35 and his shiny new boltgun with fancy scope on top, well into the 1980s. A levergun chambered for the same caliber as the owner's handgun has also been a popular idea for over 130 years.

In the early 1960s, there was a trend to have Winchester Model 92s converted to .357 Magnum to take advantage of the .357's better ballistics while still retaining the desirable features of the Model 92. Browning's long discontinued high-quality Japanese-made lever-actions based on the Winchester 92 Models, in .357 Magnum and .44 Magnum, still bring in good money whenever one turns up for sale today.

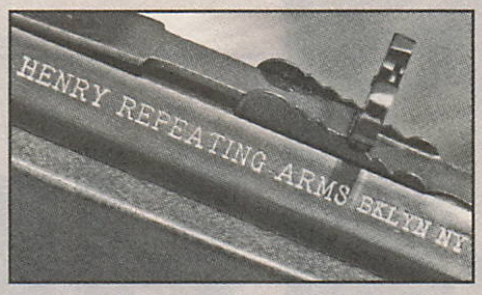
There are good reasons to chamber the .357 Magnum in a lever-action. The cowboy of the Old West found it handy to carry a rifle or carbine that shot the same loads as his trusty sixgun, and that's still



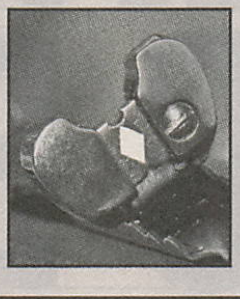
a valid premise. Added to that, the .357 is a powerful round fully capable of handling everything from rabbits to bruins (of the smaller variety) with the correct load and good placement, without being too much of a blaster. For those who need something a little more potent than a .38, but find the .44 Magnum just a notch too high, the .357 can be a near perfect choice. Some handgun calibers benefit more from a longer barrel than do others; the .357 Magnum can gain up to 500 feet per second (fps) in velocity in a rifle over a revolver, depending on the load and guns used. That's a substantial boost in energy, range, and terminal effectiveness. Accuracy can be quite good in a levergun; there's a wide variety of loads, bullets, components, handloading dies, and other support gear available, and the round is usually very easy on recoil for just about anybody to shoot in a rifle or carbine.

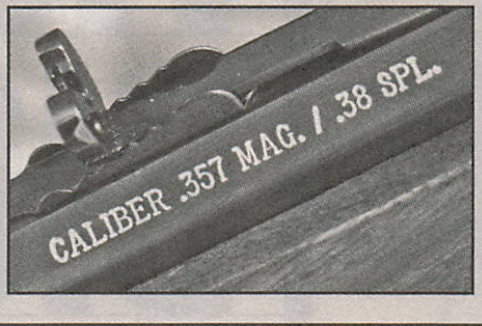


Marble's bead and buckhorn sights are big and easy to find.



The Big Boy's gold barrel lettering is a standout deluxe touch.





Henry's centerfire retains the under-barrel tube magazine loading of their rimfire line.

Currently, with the demise of the Winchester domestic lineup, that leaves fans looking for a new .357 levergun with a choice between the long-running Marlin Model 1894 and the more recent Henry Big Boy. Let's take a look at what Henry's doing with their newest "golden gun."

Gun Details

The Henry Repeating Arms Company has quietly taken over a nice chunk of the lever-action market, starting with their economy-grade basic blued .22 rimfire Model H001 several years ago. They've since expanded their blued line with other variations, and those guns have offered decent performance at decent prices. The flagship of the rimfire leverguns that followed, the Golden Boy, is one of the smoothest and most accurate rimfire lever-actions on the market. It's also one of the best looking, with a 20-inch octagonal barrel, bright Brasslite receiver, brass buttplate, and American walnut stock topped by Marble's carbine buckhorn rear and brass bead front. I've tried all three calibers in the Golden Boy (.17HMR, .22LR, and .22 Magnum), and been impressed by the accuracy in each one. Henry does not cut corners on their barrels, and their resulting accuracy shows it. The next step was a centerfire version, and when the .44 Magnum was released a couple years back it generated quite a bit of interest. The one I tested was also a straight shooter, and when Henry advised they were planning a .357 Magnum Golden Boy last year, I put in a request for a sample. It took a while, as new introductions sometimes do, but when the gun finally showed and its turn rotated around, we were off to the gravel pit to see if the Henry tradition was still running.

The .357 Big Boy was no major departure from the .44 Magnum version, so I was ready for the solid heft of the nearly 9-pound rifle. In profile, the Big Boy looks just like a beefed-up rimfire Henry, which it pretty much is, aside from the action itself. The Big Boy's receiver, unlike the rimfire Golden Boy whose external "gold" is actually a removable receiver cover, is solid brass. Can a brass receiver handle .357 Magnum pressures? Well, it's actually the same bronze alloy used in the .44 Mag Big Boy, and it is more than strong enough to do its job. The internal action is built around the centerfire calibers, and not just an adaptation of the rimfire mechanism. Otherwise, though, if you've seen a Golden Boy, you've seen a Big Boy. The brass barrel band and buttplate, the sights, the very nicely grained walnut stock and fore-end, the heavy 20-inch octagon barrel, the gold barrel lettering for the maker's name and the caliber, the solid-topped receiver and the side ejection, are all basically the same in form as the smaller rimfire Golden Boys.

There's no external safety and no half-cock hammer notch on the .357 Magnum Big Boy. The design does feature a sliding transfer bar in the hammer that prevents it from striking the firing pin unless the trigger is pulled at the same instant that the hammer falls. Henry says the system is positive enough to allow perfectly safe carry with the hammer down behind a loaded chamber; the gun will not fire even if dropped on the hammer. The Big Boy also uses a trigger block that activates itself automatically when the lever is opened to block the trigger from firing the rifle with the bolt partially open and out of battery. It's automatically

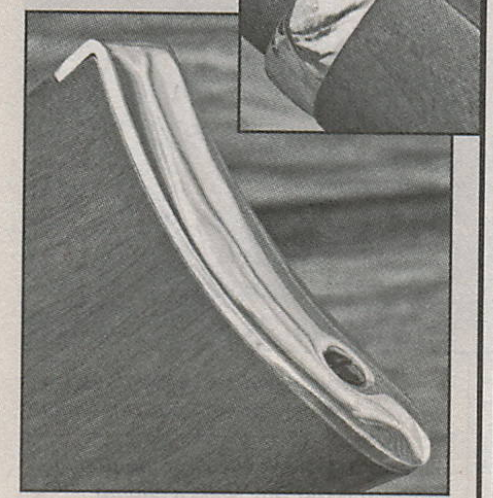
Bullet weight measured in grains and accuracy in inches for best 5-shot group from 50 yards. Elevation: 4500 feet, Temperature: 25 degrees.



Furniture is bright brass on incidentals such as the barrel band and buttplate.

deactivated again when the lever's closed to its firing position.

Workmanship is quite good on my sample with barrel flats that are flat (no polishing waviness) and straight lines that are both straight and well defined; brightly polished brass, good wood to metal fit in general, with the walnut standing just a trifle high in areas such as receiver tangs and the buttplate, and uniform bluing on applicable steel parts. Trigger pull was a shade over 4.5 pounds, crisp, with no take-up and very little overtravel.

Shooting Impressions

On a warm 25-degree day in January, under clear blue skies I fired seven commercial .357 Magnums and one .38 Special +P load through the Big Boy across slightly over a foot of very bright white snow at 50 yards. I had no doubts that the gun could group well a ways beyond that, based on previous experience with Henry lever-actions, but it was a practical matter of slogging back and forth in the snow between the target stand and the portable shooting bench to shoot, measure groups, tape up targets, and shoot another round. Setting up at 100 yards would have unduly bogged down the session, literally, and 50 yards is about an average shot for many hunting areas where leverguns are typically used, anyway.

Turned out I was right about the intrinsic accuracy of the Henry, which was no surprise. From the bench, all but one load, the Winchester 125-grain JHP, gave a best five-shot group under 2 inches, including the .38 Special. The Winchester round's best at 2.69 inches was still nothing to sneeze at. Federal's 1.19-inch group was the best of the day, and any of the rounds' performances at 50 yards would have easily translated to perfectly useful hunting accuracy out to 100 yards or so, which is pretty much the maximum effective range for deer in the .357 Magnum. Depending on bullet weight and placement, a good shot could extend it further, and if you're up to it, the Henry certainly is. Just know the limitations of your own talents and your ammunition.

The trigger was a boon to good shooting, but the sights need a little understanding. If you've seen me write about the rear Marble's buckhorn before, you know I dislike the white painted diamond on the elevation adjustment sliding insert. This insert with a larger U-shaped notch on top and a shallower U-shaped

Wgt w/o mag: | 20.1 | 18.5 | 8% Lighter
With the introduction of the K9 pistol in 1995, Kahr Arms created the ultra compact major caliber pistol market. Since then many have tried but none has succeeded in delivering a pistol as compact and reliable as the Kahr pistols. With the introduction of the P45, Kahr continues this tradition of delivering unrivaled Concealed Carry Weapons.
The Kahr P45 has the combination of features which make it the best Concealed Carry .45 ACP caliber pistol in the market. It has the ideal combination of stopping power and shooting comfort, and is smaller, slimmer and lighter than competitive brands. Its smooth double action trigger reduces flinch, improving shot placement, and is safer. In stressful situations, fine motor control is impaired contributing to the possibility of accidental discharges with traditional single action triggers found on many autos and revolvers. The P45's natural point of aim and low felt recoil make it an ideal gun to shoot and carry.
Go to your nearest retailer and ask for the P45.

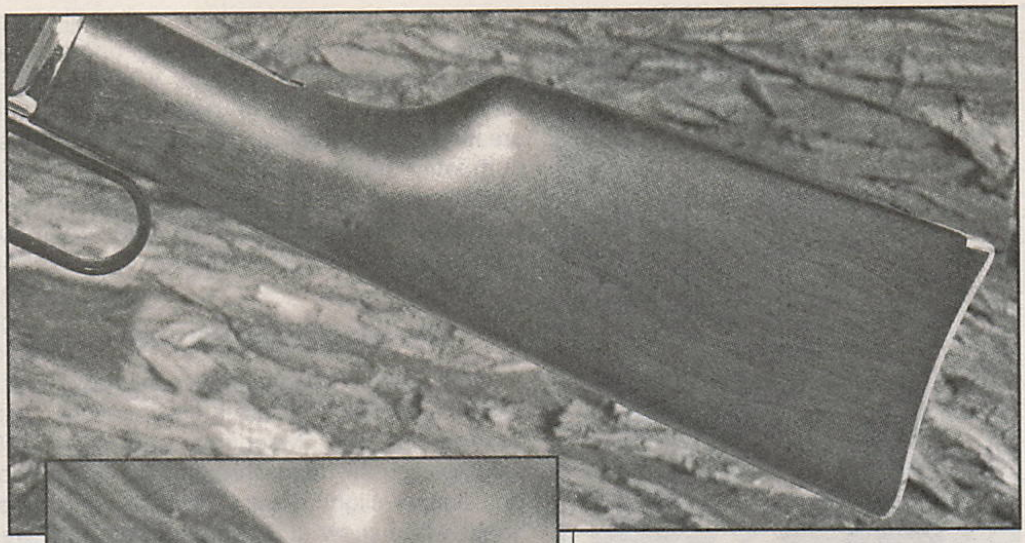
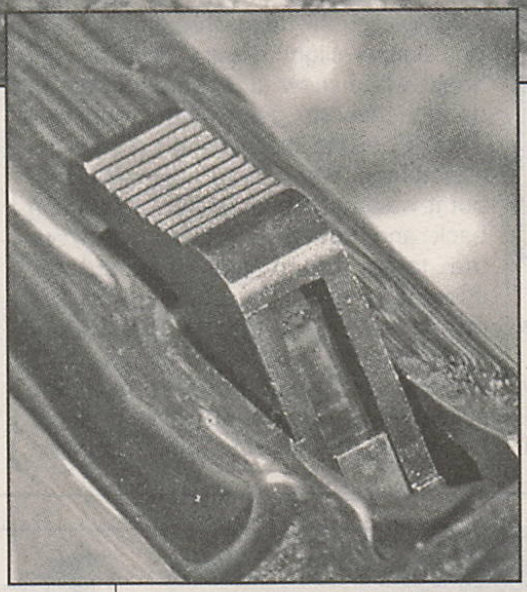
notch on the bottom, slides up and down for fine adjustments in elevation and is retained in its slot between the "horns" by a small locking screw. Major (coarse) elevation adjustments are made by sliding the stepped elevator ramp on the barrel backward or forward to raise or lower both the main sight base and bullet impact. Once you've set the base on the right elevator step, you then loosen the insert locking screw, slide the insert up fractionally, tighten the screw, shoot to see if point-of-impact now meets point-of-aim, and if not, repeat the process till it does. If you prefer a smaller notch, remove the insert entirely to rotate ends, leaving the smaller notch up. As mentioned, the side of the insert facing the shooter has that painted diamond, intended to help draw the eye to the notch quickly when mounting the rifle for a fast shot, while the back of the insert is plain blued steel. I find the diamond is nothing but a distraction, and on bright days with the sun slanting in from behind, it also makes it hard to clearly locate the front bead in the rear sight on top of the diamond. Ordinarily, on my own guns that come equipped like this, I either use a black ink felt-tipped pen to darken the diamond, or if I'm uncharacteristically energetic at the moment, I remove the insert and re-install with the diamond facing away from my eyes. In this case, since it'd be going back to Henry, I shot the Big Boy as it came, and not too long into the session ended up shading the rear sight with the off hand while firing from the sandbag rest, just to avoid all that glare. Not the best shooting form, but if I got these results under those conditions, the Henry should do just fine in most hunting situations.

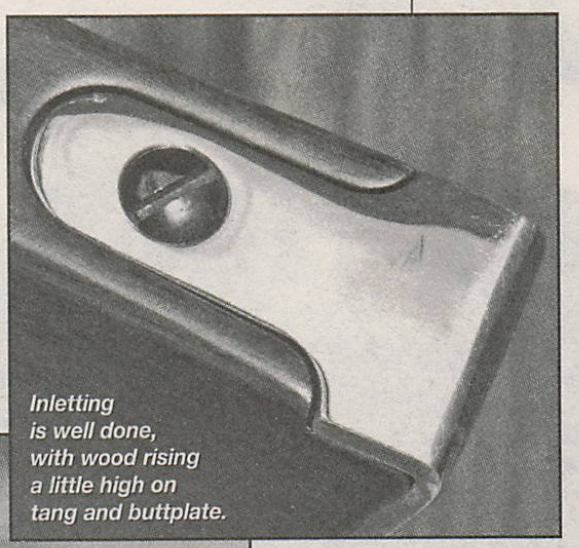


Straight-wristed stock is Henry's typical nicely done American walnut.

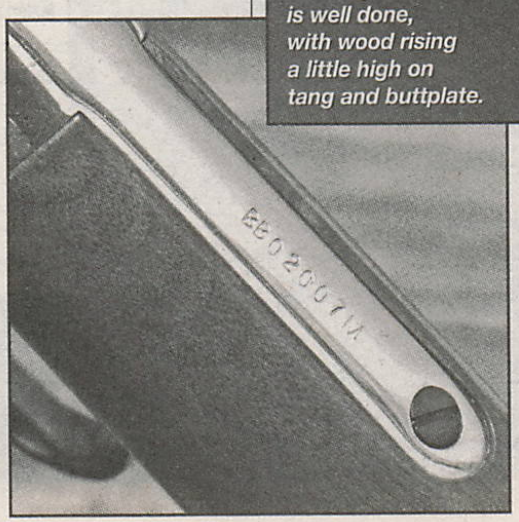


With no half-cock notch or manual safety, the Big Boy uses a sliding transfer bar for safe carry.

The front sight also needs a comment in passing. Since the large brass bead is not much of a precision target sight (it was never intended to be), shooting for accuracy, I set up the elevation so I could use a six-o'clock hold, with the bottom of the black bull's-eye resting right on the top of the brass bead. That approximates the same sight picture and hold I use with a normal black post/blade sight. I find it's the best way to get repeatable accuracy in testing with this sight combination. But, this isn't the way these sights are typically used when hunting. In the field, you'd normally put the entire bead over the area on the animal you intend to hit. You're usually not going for a precise sight picture, and placing the bead to cover the target area gives a quick and sufficiently accurate picture to get the job done. Big and shiny to let your eye pick it up in a hurry, the bead also stands out against a dark target better than a plain black blade. It's a proven and practical hunting setup, but keep in mind that if you test different loads and bullet weights using the six-o'clock sighting method I did here, when you actually put the bead on target and pull the trigger, you'll be shooting high. When set for a sight picture on the bottom of a normal 8-inch black bull, using the entire bead and centering it on target, you're raising the muzzle. The best way I've found to sight in a combination like this at 50 yards is to find whichever load meets my purpose and accuracy needs using the six-o'clock setting, make sure the windage is right on, then raise the bead to completely cover the black bull, and fire a string. Here, the brass bead just barely obscures the entire bull, making it very easy to get a repeatable aiming view by simply making sure no black is visible around the edges of the bead. Adjust either the elevator notch or the insert to bring the point-of-impact down, and adjust as necessary to match up your load and sight setting to the average distance you want the gun to shoot to using the entire bead as an aiming point, rather than just the top edge.



Inletting is well done, with wood rising a little high on tang and buttplate.



I didn't really see much that needs improving on this gun, aside from it being a little touchy in feeding. With some loads, the Big Boy would jam a crimp against the upper rear of the chamber on feeding, and it occasionally did the same with a relatively sharp-angled bullet nose. Not a major malfunction, it was easily cleared by just jiggling the lever a bit and then closing the bolt. But, I think either improving the slight bevel at the rear of the chamber opening, or rounding it slightly, would be indicated and using a .357 load with a well-rounded crimp and a rounded bullet nose would improve feeding.

Through a good range of bullet weights deliberately selected to test the spectrum from 125 grains for light work on up to 180 grains for the heavy jobs, the Big Boy showed no marked preference in accuracy for any of them, or between jacketed and lead bullets.

A little on the heavy side for all-day carry on foot, the short rifle strikes me as a great truck gun for ranch or farm (although it's pretty enough to make you feel guilty about doing it), a good proposition for a hunting stand, a viable saddle gun where the horse does the packing, or a perfectly usable package during a general hunt if you don't mind the weight. Also a little on the bright side for some hunting applications, with handling and use the brass receiver and fixtures should generate the subdued patina of the original Henrys eventually. The more you use the gun, the quicker it'll happen, and for those who like bright and shiny, a little brass polish can keep it that way indefinitely.

Final Notes

Leverguns are still alive in the hearts and hands of those who appreciate their quick-handling capabilities, and Henry Repeating Arms is keeping the tradition going at 110 8th St, Dept CH, Brooklyn, NY 11215; 718-499-5600; www.henryrepeating.com

SPECIFICATIONS
HENRY BIG BOY

Caliber: .357 Magnum, .44 Magnum, .45 Colt
Barrel: 20 inches octagonal
OA Length: 38.5 inches • **Weight:** 8.68 pounds
Stock: American walnut • **Sights:** Tall brass front bead, adjustable rear
Marble's buckhorn • **Action:** Lever
Finish: Brass receiver and fixtures, blued steel
Capacity: 10 + 1 • **Price:** $879.95

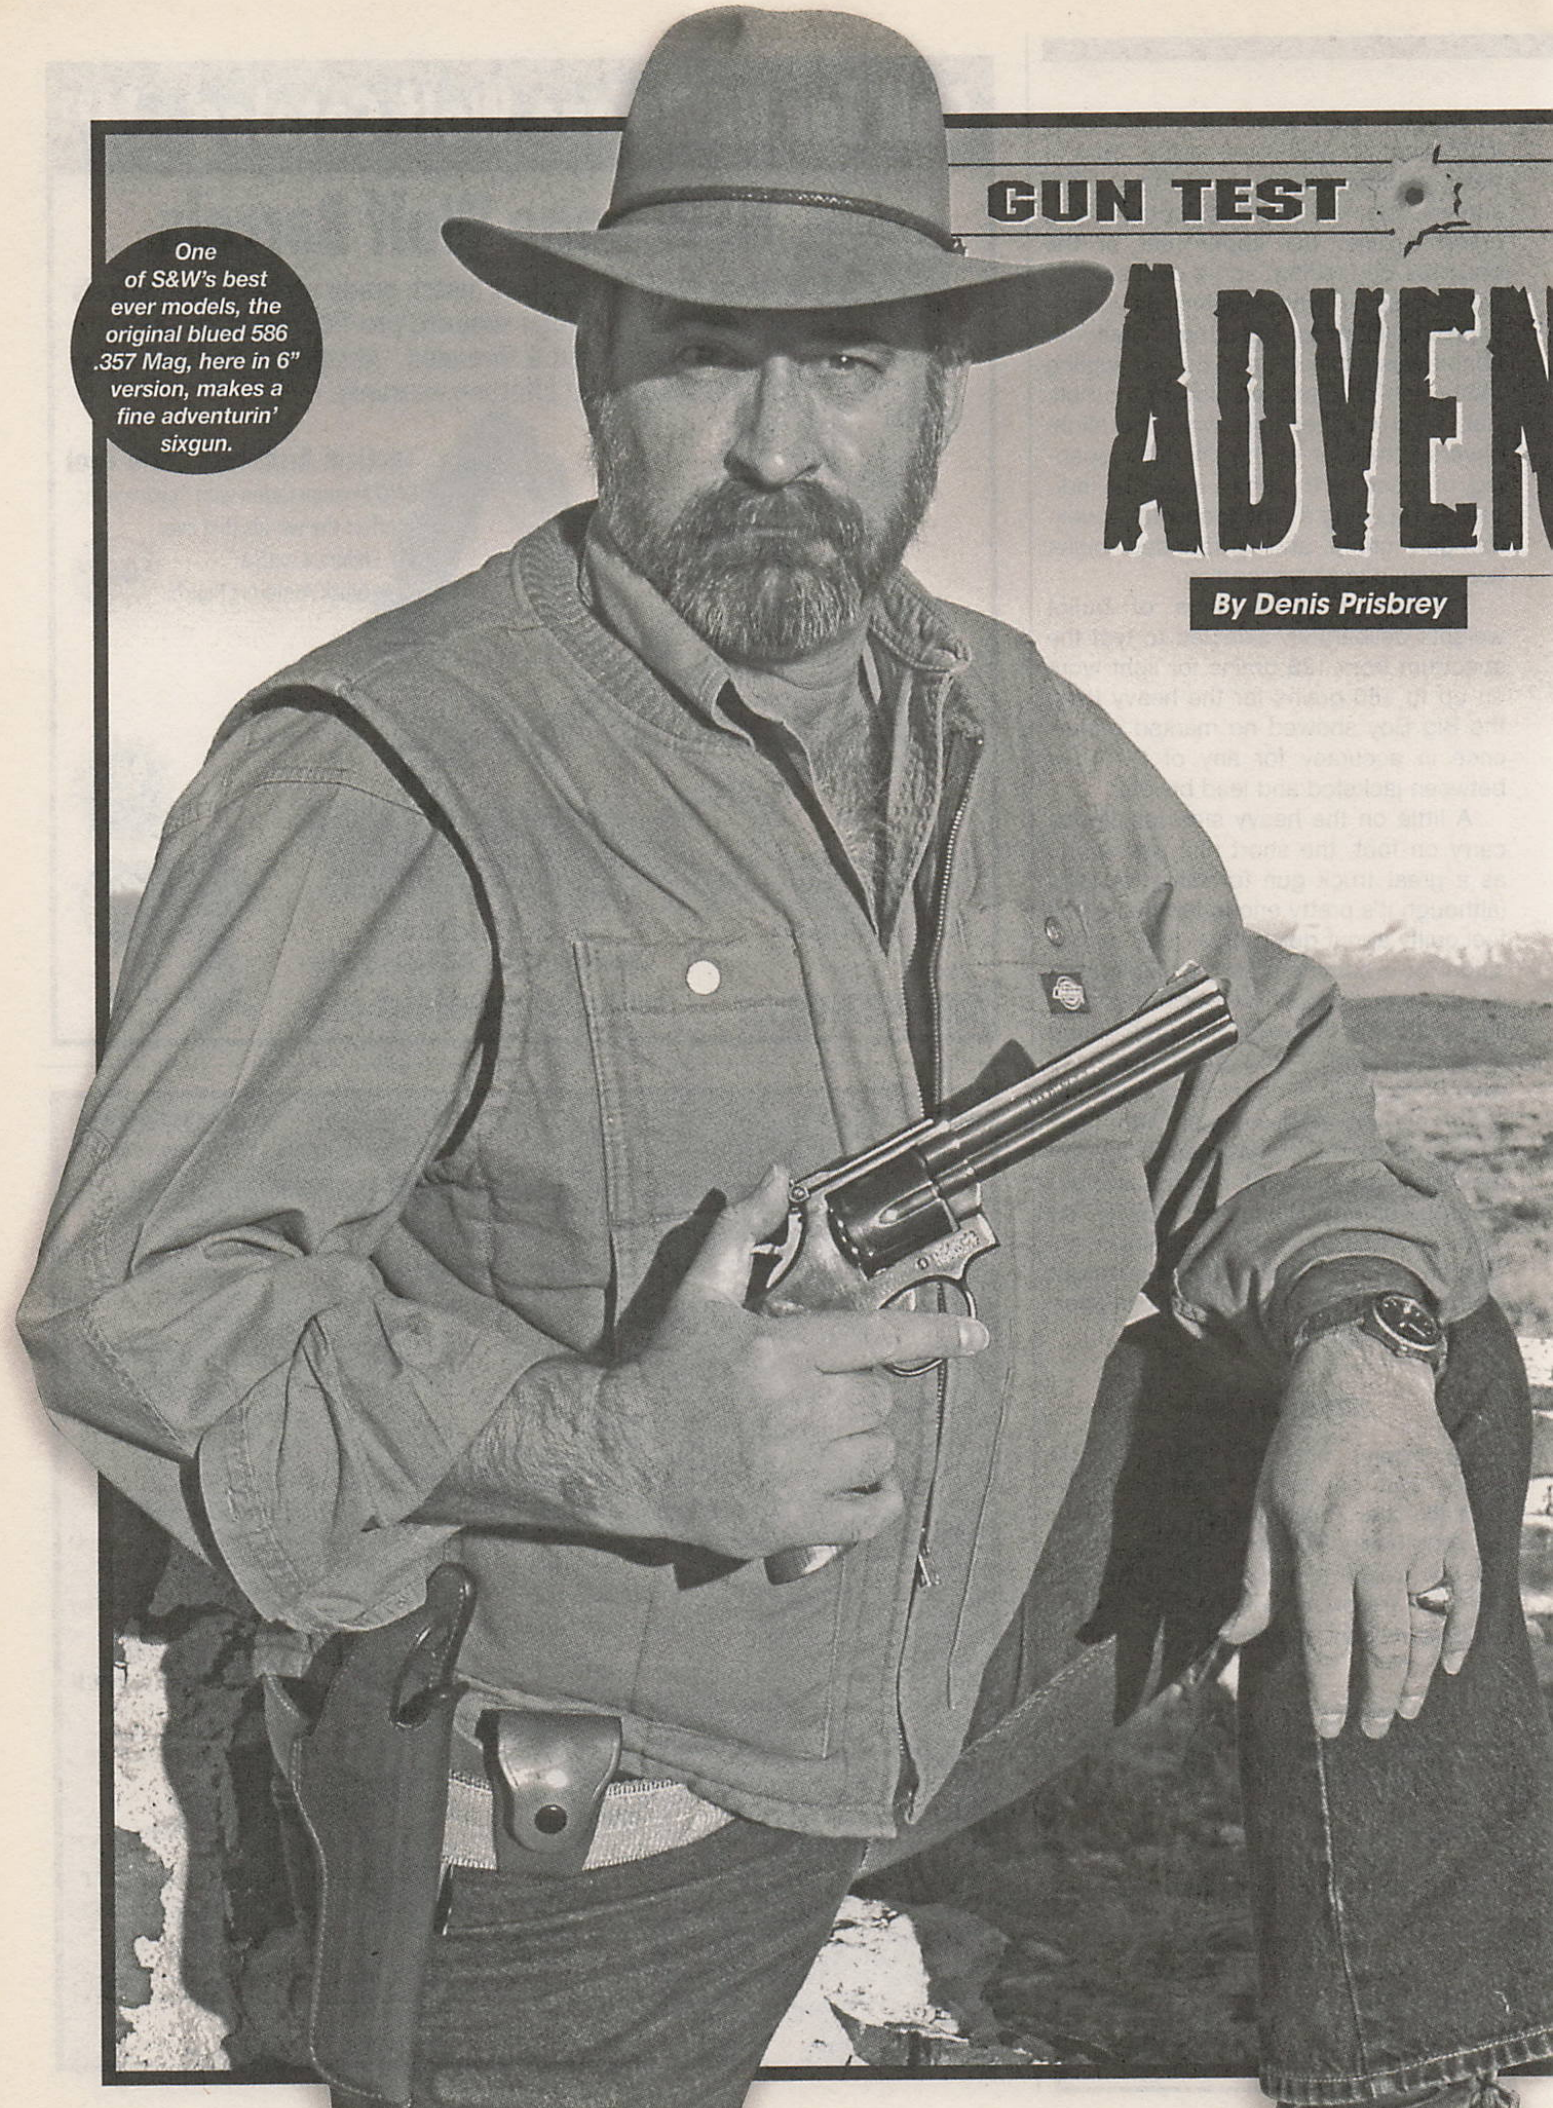
GUN TEST

ADVEN

By Denis Prisbrey



One of S&W's best ever models, the original blued 586 .357 Mag, here in 6" version, makes a fine adventurin' sixgun.

Six choices for the land of gold bars and grinning skulls!

TURIN' WHEELGUNS

There are countless tales of gold won, lost and "misplaced" in the Old West. Add to that a few murders, questionable deaths and mysterious disappearances. The gold fields and streams in every state where precious metals have been sought with a gleam in the eye and a dream in the heart, all saw their share of sudden death and lonely burial places. Many became legends. Most faded into the oblivion of local half-remembered stories passed down around campfires on dark and starry nights.

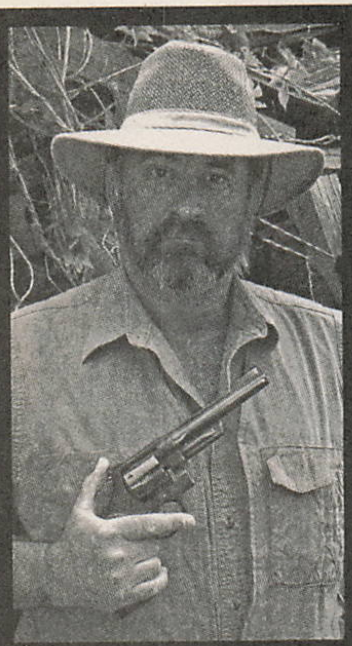
One that still crops up now and again in Colorado happened back in October of 1880. S.J. Harkman, E.R. Oliver, and H.A. Melton were prospecting in the Sangre-de-Cristo Range in Saguache County on the San Luis Valley side. About two miles North of Dead Man's Creek, a blizzard set in. In those lofty mountains, a full-blown white-out was nothing short of a killer storm for those unfortunate enough to be caught in it, and with disaster looming, the three partners were suddenly totally lost in the swirling snow and fierce winds. Stumbling blindly on in search of some natural feature that could be used as emergency shelter, it was relief beyond words when the men suddenly fell into a tunnel opening in the side of the small canyon they were about to die in.

Eagle's Finger Position Grip anchors the long-barreled revolver in hand, this Bianchi 5BHL thumbbreak holster carries it comfortably on Galco's nylon web Instructor Belt.

Using seasoned and mostly dry deadfall pine branches found under the ledge of the opening, they laboriously lit three of the branches as torches, crawled further inside, and shortly found themselves in a large enough cavern to stand upright. Water dripped from the rough stone ceiling through the cold and heavy air, but the worst of the weather—and the danger—was outside. Walking carefully about the "room," Melton discovered another opening leading out of it. Prospectors being prospectors, it had to be explored. Ten feet on hands and knees took them into a much larger chamber, so large in fact that the feeble pine torches could not show the walls. With burning branch held high, Oliver stepped forward gingerly and struck something with his foot that skittered across the uneven surface. Lowering his light, the flickering flames lit up a human skull.

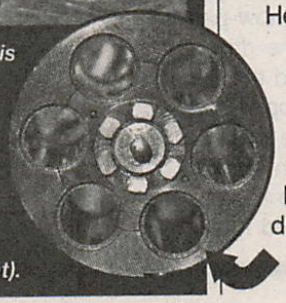
After a suitable moment of horrified silence among the dancing shadows cast by the nearly dying torches, Harkman hoarsely pointed out four more skulls. Oliver, man of action, conquered shivers not entirely caused by the low temperatures, and decided briskly, "Well, boys, I don't know about you, but I'm freezing and starving. Let's go back for wood and build a fire so we can eat." With that very practical (and honorable) way to avoid going any deeper into the cave where who-knew-what lurked, the three retreated to their packs and soon had a blazing fire in the mouth of the cave. Over the usual beans, biscuits, and coffee, the prospectors could not avoid the thought of the eerie skulls whose ghosts whispered in the blackness behind them. Finally, once fed, relatively dry, and much warmed up, curiosity overcame fear, new torches were fashioned and lit, and the trio explored further. Against one wall, a full skeleton was found. Turning to the right, another passage led to a third chamber; smaller with projecting shelf-like rocks protruding from the walls here and there. Melton slowly swung his torch toward a large stone about ten inches above the ground, and noticed several large and oddly similar shaped stones under it. Trying to lift one, Melton found it heavier than it should have been, and called the other two over. Through a coating of dust from unknown decades, light from the three torches combined revealed glints of solid gold bars!

In understandable excitement, Melton, Oliver and Harkman had the worst fidgets of their entire lives waiting for the blizzard to blow over so they could haul five of the gold bars (the most they could carry) out to civilization. Next morning, they shouldered their gear and newfound treasure and struggled out of the snow-packed mountains, agreeing as they fought through the drifts that none would tell the location of the cavern, and that as soon as conditions permitted in the spring, a properly equipped return expedition would be mounted by the three to more fully explore their Cave Of Bones. The vision of more passages, more rooms and more gold carried the men through nearly impassable terrain that otherwise would have caused them to give up



Much-missed S&W .357 Mag M28, solid back country partner.

The big 28 also rides in a Bianchi 5BHL, here on a suede-lined El Paso Saddlery cartridge belt, with grips by Craig Spegel.



The Model 28 is a throwback to "pinned & recessed" days. Barrel (above) was pinned, and chambers recessed (right).

and die. Gold, it's often said, motivates far beyond the fear of death.

It was a harsh winter that year, and more blizzards and heavy snowfalls conspired to keep the lucky treasure hunters out of the mountains while they made enthusiastic plans for returning to their hidden cache. Impatience mounted steadily until late spring when the snow had melted and the mud dried enough to make a pack trip possible. The partners eagerly set out with a string of mules, and all was fine. At first. But, as the pack train wound up into the cool mountain air, confidence waned and puzzled looks gave way to consternation. Colorado's winter had changed the landmarks the three recalled, with avalanches, fallen trees, water runoff and mudslides, so that an extensive search failed to locate the site of the cavern, or anything that looked familiar around it. Many would later say that the five large gold bars laboriously hauled out of the cave should be a fine enough reward for this adventure, but the three prospectors who sadly trudged out of the Sangre-de-Cristos that day with empty leather panniers and all-too-vivid memories of several hundred pounds of dusty gold on the floor of a high mountain cavern never agreed.

The grinning skulls still whisper in the darkness as they guard their gold, and their secrets.

Nobody knows how those skeletons came to be there, or the gold. The Spanish were the West's first organized miners, and they left traces of crude smelting operations all over Arizona, New Mexico, Utah and Colorado. Stories of hidden Spanish gold keep hundreds of modern day treasure hunters afield every year, and not all are friendly. There were no clues to indicate whether the skulls were Spanish, Indian, or white fur trappers. Were they killed for trespassing, for theft, or merely for being in the wrong place at the wrong time?

If you're a seeker of ancient gold, going armed is not paranoia, and a dependable revolver is always a good choice. Easy to learn and use for most people, they can handle anything from rabbits to bruins. An individual decision, 4-inchers are more comfortable on a belt in a car or truck, but the 6-incher offers better velocities along with a longer sight radius, and many people find they shoot better with the longer barrels.

Here are six of my favorite 6-inchers.

S&W Model 25-9

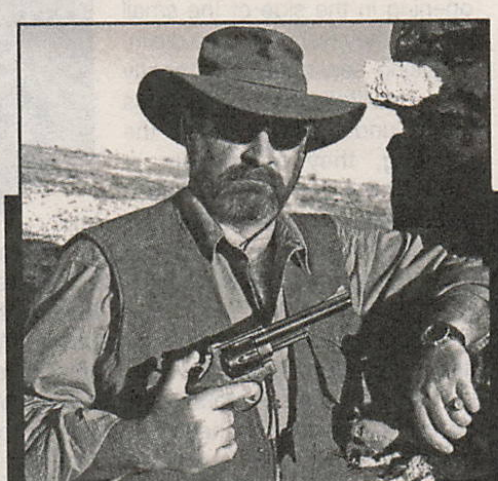
The .45 Colt is my main outdoors working caliber for general purposes. Having developed a serious case of confidence in my trusty old 4-inch Smith & Wesson 25-5 on the job way back when, one day the urge struck for a six-inch version. Diligent searching for a longer 25-5 led me to the happy discovery of a 25-9 on an Internet auction site. The 25-9 was essentially the last of the blued .45 Colt 6-inch 25 series using the older hammer-mounted firing pin and forged parts. It was what I consider the "ultimate" in .45 Colt Model 25 development, and it was a very fortunate acquisition. Made in the same configuration as the top-of-the-line "Dirty Harry" Model 29 .44 Magnum, the 25-9 features a target trigger, target hammer, target grips and a white outline rear sight blade with red insert ramped front sight blade. Construction on the gun is very well done with high quality bluing and parts fitting.

Two areas that typically need the most attention on these are the chunky grips and the wide serrated trigger that doesn't lend itself well to double-action use. My 25-9 is waiting in line for a narrower smooth-faced trigger, but it now wears a pair of Eagle rosewood panels done in their Classic style, with a thinner neck section at the top, a relieved area on the upper left for speedloader use, and a palm swell on the right. Infinitely better than what came on the gun, they enhance both looks and performance, at $79.95. Good leather's always a must, and the big S&W rides well in a natural tan high-ride sandwich-style thumbbreak from Tex Shoemaker. Not a fancy rig you'll be afraid to scratch, the open-bottomed Shoemaker holster is basket stamped and double-stitched at key areas, and very sturdy. Check with them on pricing and color availability.

Ammunition? For low country use, Speer's 250-grain .45 Colt Gold Dot HP can handle any problem you're likely to run into.

S&W Model 28

Also in the low country, it's hard to go wrong with a good .357 Magnum, and the Model 28 is a certified classic. For $600 at a local gunshow I acquired an unfired sample of one of the most respected and durable models that S&W ever



S&W's Model 25-9 and author explored what's left of an old stone powderhouse.

The "ultimate" long-barreled S&W .45 Colt and rugged Tex Shoemaker leather

made. An "economy" version of the flagship Model 27, the 28 was built for a cop's budget and used the same basic heavy-duty large N-frame platform without the nice polish job, checkered topstrap, and target sights, grips and trigger. Inside and everywhere else it counted, the two models were identical in function.

Mine features the narrower semi-target hammer, narrow serrated trigger, and black front and rear sights, and came with the regular small service style checkered wood grips that were standard. It also uses the recessed cylinder and pinned barrel that hearken back to what S&W purists like to call "better days."

The 6-inch 28's heavy frame and long barrel reduce recoil while boosting velocities, and any good jacketed 158-grain hollowpoint that shoots well in a Model 28 should handle deer on down with good placement. Consider a 180-grainer on tuskers if you're married to the caliber for pigs. I've mentioned Bianchi's 5BHL high-ride thumbbreak before, and that's for good reasons. I have several to fit various guns. It's a rugged and practical closed-muzzle suede-lined design, and can fit up to a 2-1/4-inch belt, like the equally suede-lined and rugged cartridge belt from El Paso Saddlery it rides on here. If you shop around you should be able to pick up the Bianchi holster for about $90, and EPS starts their belts at around $70 in plain untooled configuration. Craig Spegel's always excellent Boot Grips With A Little Extra cut slightly higher in the inside top arch for what he calls my "fat fingers" are a much-improved hand fit over the factory wood.

S&W Model 586

Much like the lumbering .44 caliber percussion Walker the Colt revolver was later replaced by the much more svelte .44 caliber 1860 Army revolver, so it went with the S&W N-frame .357 Magnums and L-framed guns. Introduced in the early 1980s as a compromise in size and durability

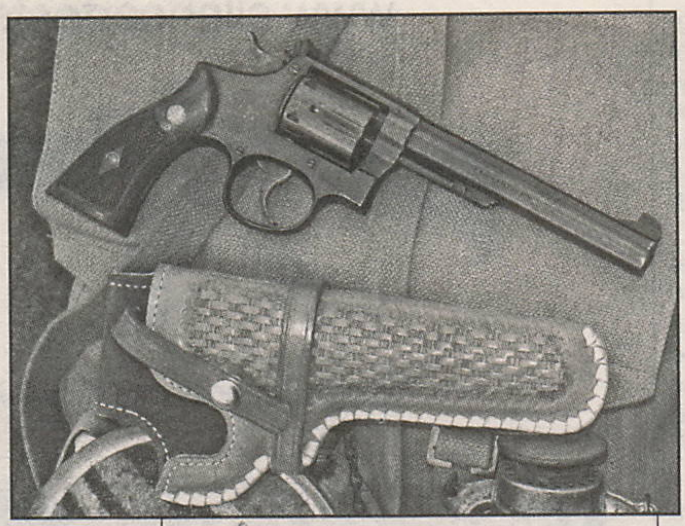
between the popular K-framed Model 19, and the size and weight of the bigger Model 27 and 28 N-frames, the mid-sized 586 with a full length underlug was reminiscent of the pricey Colt Python in profile, much trimmer in the hand and lighter on the belt than the N-frames. And it held up far better under the pounding of the new-at-the-time hot 125-grain .357 police loads than the K-frames. It, and the stainless 686 versions, eventually caused the death of S&W's regular production Model 27s and 28s.



A lucky find, 1955 pre-Model 14 K-38 target revolver, and Idaho Leather Company field holster for backcountry use.

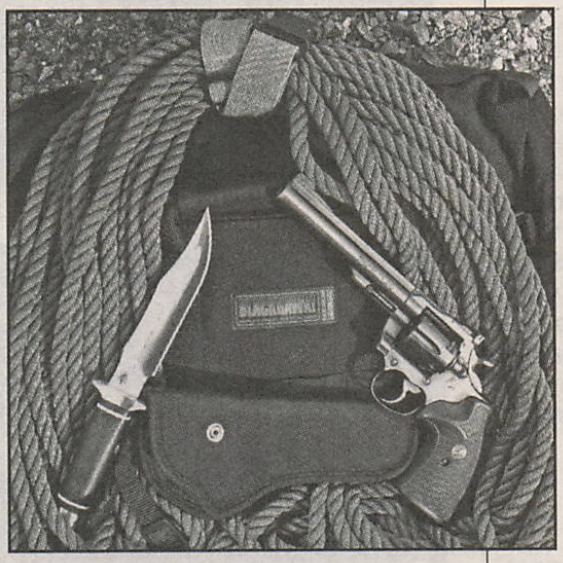
My personal opinion is that the 586 in original blued form was one of the best S&W revolvers in the history of the company. Not too big to be ungainly with a muzzle-heavy front end, and a frame size configured to handle the hot magnums (as opposed to just adapting new heat treatments to higher pressures like the company did with the much older N and K-frames), the 586 has more beef where the barrel screws into the frame, a thicker barrel shank, and a heftier forcing cone to resist erosion and cracking longer. Sights feature a red ramp front and a white outline rear. My sample (an older lucky gunshop find at $350) also uses a semi-target hammer, narrow smooth-faced trigger, and a hammer-mounted firing pin with no MIM parts. A 6-inch 586 can be a little too front heavy for some, but it hangs steady on a long shot for me, and the weight's almost a built-in muzzle brake on recoil with many loads. The original oversized wood also had to go, and Eagle's smooth Finger Position grips with palm swells are a major upgrade in either rosewood at $69.95 or ebony at $89.95, or checkered for another $20.

Also carried in a Bianchi 5BHL holster, the combination works well with a Galco Instructor's Belt. Made of mil-spec webbing and reinforced where the holster sits, this 1-1/2-inch belt comes in three sizes and four colors, and uses a drop-forged steel buckle for no-hole cinching. The beauty of this $49.95 belt is that you can move different holsters, knives and ammo carriers on and off it without having a dedicated caliber-specific cartridge belt.

S&W K-38

Another very fortunate gunshow find left me the proud owner of a 1955 S&W K-38 6-incher. The predecessor to what later became the Model 14 in 1957, it was a .38 Special target revolver. In roughly 95% condition, this five-screw gem shows a level of workmanship and fitting not seen on today's CNC-produced revolvers with a smooth DA pull and crisp single-action trigger. Never intended as a field gun with black Patridge front target blade and black rear sight, narrow serrated trigger and older style semi-target hammer, there's no reason why it can't ride along in areas where four-legged critters are no larger than coyotes and two-legged critters know better than to get in front of it.

The brawny Trooper MKIII is a heavy-duty partner, with stainless SOG Trident fixed-blade, Uncle Mike's nylon utility hip holster, and BlackHawk's nylon Rope Bag.



The K-frames are some of S&W's best handling revolvers, and that holds with the 6-inch K-38; it's dynamic and quick moving in the hand despite the extra 2 inches out front. One concession needs to be made to its age, though. I won't run anything hotter than standard velocity .38 Special loads through this fine old S&W, and that means no +Ps. Winchester's Super X 158-grain lead semi-wadcutter does a pretty good job as a general utility load.

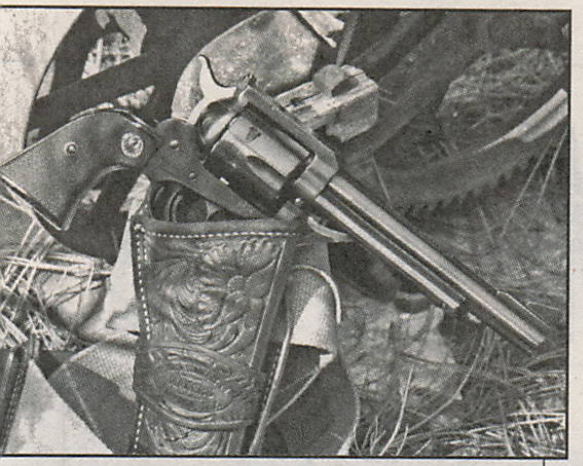
This is one revolver that'll never touch nylon or Kydex. Ben Wetzel at his Idaho Leather Company built a very solid field holster in a pattern straight out of the 1950s for my K-38. A classic snapstrap design, it's suede lined, basket stamped, and laced top to bottom on the rear just like the one I used to see at Sherm's Barber Shop in Salt Lake City in 1959. It's a blast from the past and a perfect choice for this old paper punchin' .38. Ben's pricing starts at $57.95 on the Model 77 for 6-inchers, and goes on up with features added. My first handgun holster bought in 1970 (which is still in great shape) came from this company.

Colt Trooper MKIII

Back to America's favorite magnum caliber, the .357 Trooper MKIII always stood in the shadow of more famous Colts during its production run from 1969 to 1982. A brawny heavy-framed and heavy-barreled revolver; hammers and triggers were produced from sintered (powdered) metal technology, an earlier form of today's MIM process, and actions were not as slick as earlier designs such as the Python, which led to sniffs of disdain by many Colt fans. The MKIII's sleeper status is changing, though, with interest and prices both rising. Another recent $350 buy, my Trooper left Hartford in 1977 with a frame-mounted firing pin, Ruger-style transfer bar, wide hammer, medium width smooth-faced trigger, black sights, and hugely ungainly Colt checkered wood factory grips.

This Colt has an acceptably smooth double-action and crisp single-action trigger as it came. A call to Millett Sights got an orange front ramped blade on the way, and it was duly installed along with a standard Colt white outline rear blade by my gunsmith on arrival. A set of nonslip hand-filling Pachmayr Presentation grips replaced the original wood, and the Trooper was good to go. The Millett front orange bar jumps out in the rear sight in almost any light, and the big Colt points very well for me.

A Size 3 Uncle Mike's black nylon 8103-1 Hip Holster makes a perfectly workable rig for this utility revolver in the wilds, and the price was right at $13.95 locally. SOG's beautifully crafted Trident with 6.4-inch AUS 8 stainless hollow ground blade, black micarta handle, and very practical leather sheath



Ruger's 50th Anniversary .44 Flattop cheats a bit to be included, at 6.5 inches, but makes a very reassuring package in its El Paso Saddlery 1930s Austin holster.

with sharpening stone included at $200, is a fine high quality all-weather adventurin' partner for the Trooper.

Ruger 50th Anniversary Flattop .44 Mag

We saw quite a bit of hoopla last year over Ruger's commemorative .44 Magnum Flattop Blackhawk, and it was well deserved. Mine is included here, even though its 6.5-inch barrel technically doesn't fit with the 6-inch theme, because it's close enough, and a reliable and accurate long-barreled .44 Mag is never a bad choice for high timber.

Originally intended as a one-year 50th Anniversary offering in honor of the original Flattop .44 for 2006, the Flattop features current transfer bar lockwork along with Ruger's new reverse-indexing pawl that aligns the chambers with the loading gate channel, a steel rear sight, and the smaller steel gripframe dimensions of the originals. It came with a smooth action, and shoots Garrett 310-grain hardcast lead Hammerheads under 2 inches at 25 yards. You can work it out of the box, or tweak it a bit. More visible sights would be helpful, and you'll probably want to replace the painfully checkered factory grips. Mine's had a white outline rear blade installed, and the reverse-indexing plunger removed to leave a free-spinning cylinder. With the Blackhawk's near legendary dependability, this .44 Magnum is huge peace of mind, and the Flattop's 6.5-inch barrel and trim gripframe carry well in a simple El Paso Saddlery 1930 Austin holster. The Austin starts at $105 in neutral cant, forward cant, or crossdraw and goes up with stamping options.

Ruger's still selling the .44 Flattop (as of January), paired with the 50th Anniversary .357 Magnum Flattop Blackhawk as a matched serial-numbered set until supplies run out. There may be a possibility of more Flattop production runs, but if you want one I wouldn't wait. Check with your dealer for more info.

There you have my choices in six-inchers, any one of them a solid partner for an expedition to the land of gold bars and grinning skulls.

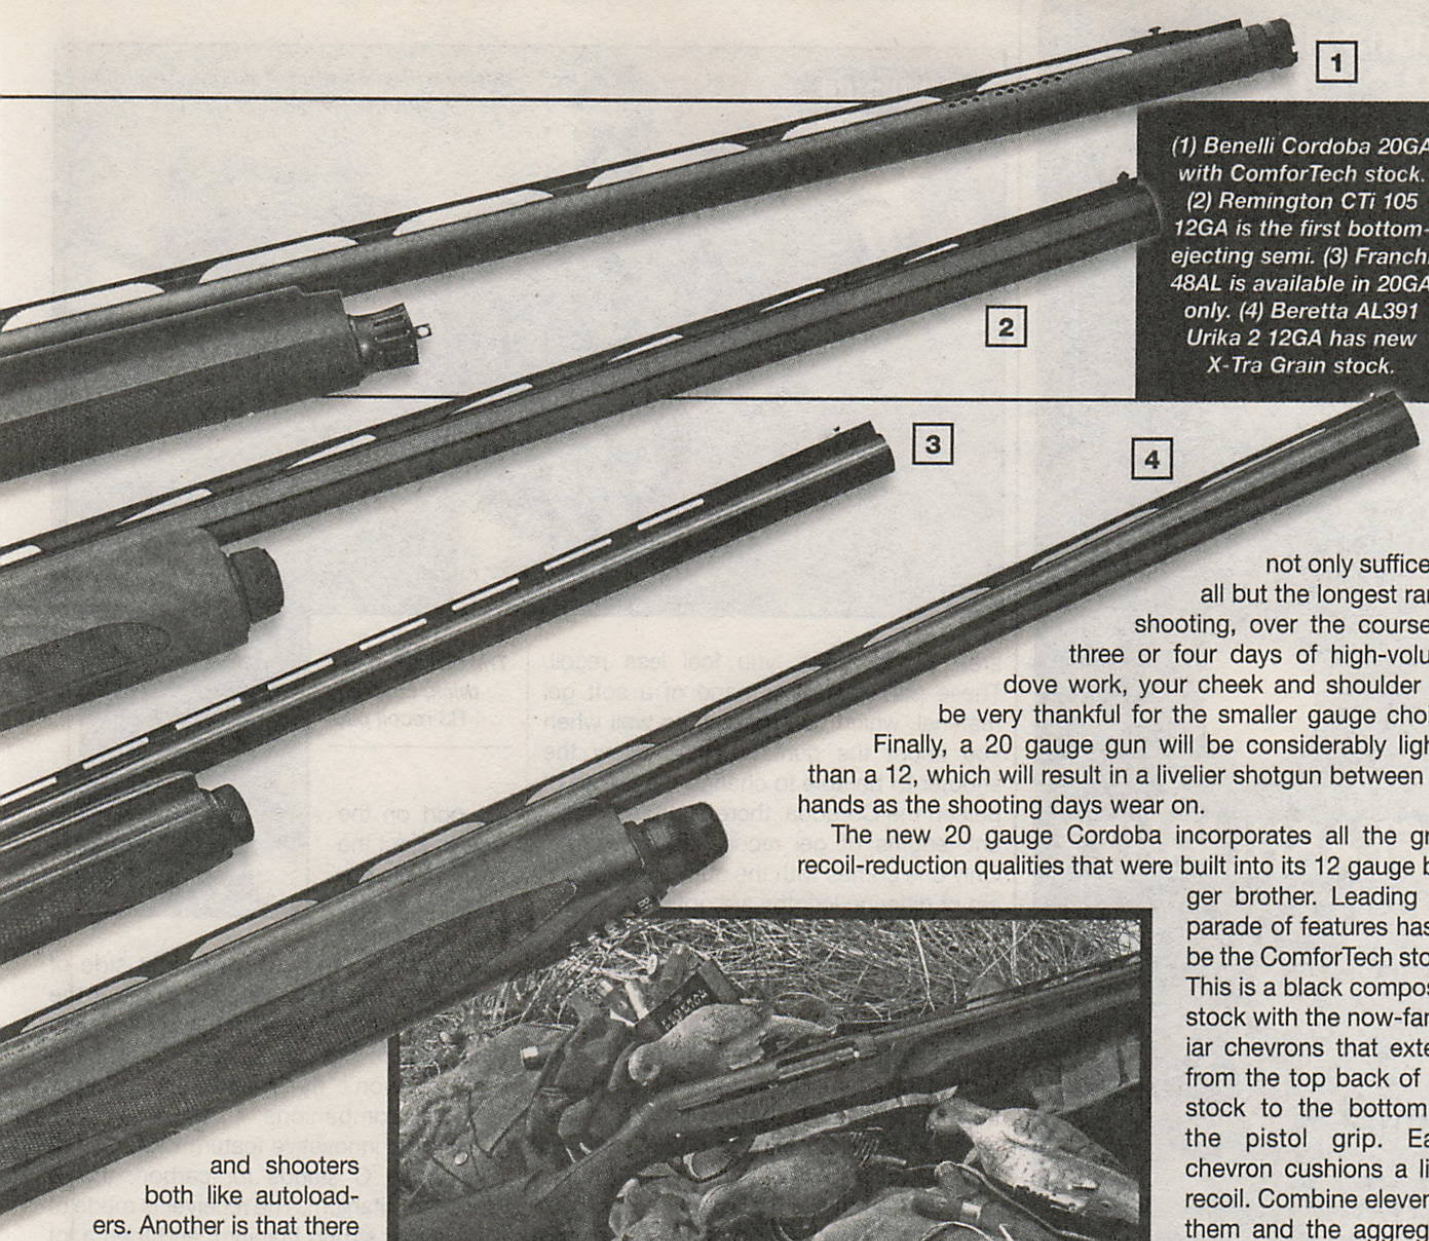
GUN TEST

A FEW FAVORITE SEMI-AUTOS

Three new-to-the-game shotguns, and one old-timer!

By Nick Sisley

Which are today's most popular type of shotguns: pumps, semi-autos, over/unders or side-by-sides? Because of price, the pump guns probably get the nod in overall sales numbers. Pumps just cost less, and in today's market a lot less. Over/unders have a good share of the market, and side-by-sides are coming up the last decade or so. But maybe when it comes to the total number of dollars spent on shotguns in the USA, just maybe the semi-autos are the figurative "king of the hill." One reason for this is hunters



(1) Benelli Cordoba 20GA with ComforTech stock. (2) Remington CTi 105 12GA is the first bottom-ejecting semi. (3) Franchi 48AL is available in 20GA only. (4) Beretta AL391 Urika 2 12GA has new X-Tra Grain stock.

and shooters both like autoloaders. Another is that there are now many semi-autos that cost a lot of money, like into four figures, well into four figures. Let's take a look at a quartet that should impress anyone in the market for a scattergun.

The Cordoba 20GA is perfect for those high-volume dove work in such countries as Argentina.

Benelli Cordoba

The 12 gauge Cordoba was such a big hit that Benelli brass probably figured, "Why not a 20 gauge?" Indeed, why not? The model name Cordoba comes from the city in Argentina that has long been the hotbed for high-volume dove action. Benelli folks took their original Super Black Eagle and Montefeltro 12 gauge models to the Cordoba area some years back. Firing 500-plus rounds every day convinced them that a lighter recoiling gun would be much easier on their cheeks and shoulders. Thus, the idea of the 12 gauge Cordoba was born.

But there are so many doves in Argentina, Uruguay and Bolivia that you really don't need a 12 gauge. A 20 bore will not only suffice for all but the longest range shooting, over the course of three or four days of high-volume dove work, your cheek and shoulder will be very thankful for the smaller gauge choice. Finally, a 20 gauge gun will be considerably lighter than a 12, which will result in a livelier shotgun between the hands as the shooting days wear on.

The new 20 gauge Cordoba incorporates all the great recoil-reduction qualities that were built into its 12 gauge bigger brother. Leading the parade of features has to be the ComforTech stock. This is a black composite stock with the now-familiar chevrons that extend from the top back of the stock to the bottom of the pistol grip. Each chevron cushions a little recoil. Combine eleven of them and the aggregate is appreciable.

The ComforTech stock also incorporates a special comb that's separate from the stock itself, and this special comb is made of a soft gel material. Not only does this material cushion your face from recoil, its surface is also very smooth, allowing the soft comb to sort of slip past your face upon recoil, again taking just a little more of the recoil's sting out. So that you can change the amount of drop in the stock, Benelli supplies three of the soft, slippery gel combs, each of varying height. Of course, Benelli pioneered the spacers that fit between the back of the receiver and front of the butt stock, allowing you to further change the drop at comb and cast dimensions. These are still included.

Benelli also features a special recoil pad. It is shaped differently than other pads. The claim is that the unique shape results in more of the pad actually touching the shoulder area. The theory then is that with more of the recoil pad actually touching the shoulder, the recoil is spread out over a wider

Sisley with a partridge taken in Argentina with the Remington CTi 105.

area. Bottom line, you feel less recoil. These pads are also made of a soft gel material, which compresses so well when you shoot the gun. Next, to allow the shooter to be able to change the length of pull on the Cordoba, there are three different lengths of gel recoil pads available. Only one comes with the gun, but two others of differing lengths are optional.

The new ComforTech stocks have a unique feel to the surface. Called Grip-Tight, the feel is almost tacky. The result is a sure grip even in wet weather. Combine all that I've said so far about the ComforTech stock and features, and you have a 20 gauge shotgun that has just about all the recoil sting removed.

But there are still more 20 gauge Cordoba features. The gun comes with extended Crio screw chokes. Crio means immersed in a genuine deep freeze that rearranges the molecular structure of the metal. Both the chokes and barrels are subjected to the Crio deep freeze. These barrels are ported, reducing muzzle jump that results in less felt recoil, and less muzzle jump means the gun is faster to the second shot. Barrels are 28 inches, and they are topped with a 10mm to 8mm tapered rib. Finally, there's ShellView on only the 20 gauge Cordoba. By looking at the openings in the bottom of the fore-end, you can tell how many shells are in the magazine.

The CTi 105 has a thick, cushiony R3 recoil pad.

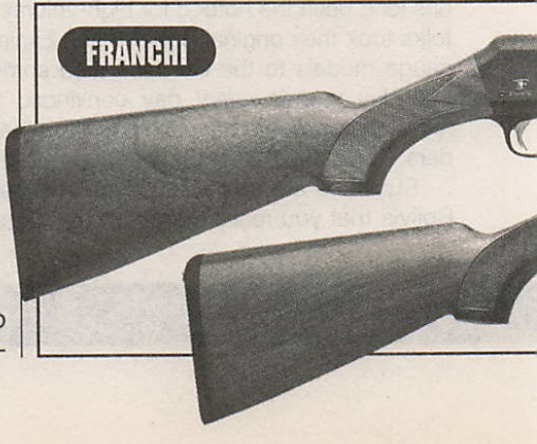
Remington CTi 105

Remington's CTi 105 model is loaded with innovation. I've shot one a lot, including a stint of high-volume dove shoot in South America. We had several guns on that trip, and they all worked flawlessly, but let's talk about what's so new with the CTi 105.

The receiver is unlike any semi-auto you've ever seen before. There's no opening port on the side to eject the shell. That's because it's the first bottom-ejecting semi, ever. On the right side of the receiver is a slot running most of the full length, where the bolt-handle rides. One idea of bottom ejection is that the empties won't fly in the face of your shooting companions.

Another innovative feature with this CTi is that the C stands for carbon, the Ti stands for titanium. The receiver is made of light, super strong titanium, and then a lot of even that light metal is milled away, thus skeletonized in non-critical strength areas. Next, a carbon sleeve insert is slipped over the top of the receiver, effectively covering those milled-away areas. Of course, this carbon sleeve weighs almost nothing compared to the metal that was removed. Still, despite the titanium and overall lightness, the CTi 105 isn't too light, weighing in at about 7 pounds, depending upon your choice of 26 or 28-inch barrel.

You'll like the new TurboFeed system. Since there's no port on the receiver side



where you would normally insert a shell in the chamber, Remington had to come up with another way. You simply push a shell part way into the magazine and let it go. Automatically, the CTi 105 feeds that first round into the chamber; that's TurboFeed.

This is also a light recoiling semi. First, it's gas operated, and that means significant recoil dampening. Second, the gun is overbored. Remington claims .735, but the few guns I've measured with my Baker Barrel Reader show about .732. A bigger bore diameter means some recoil reduction compared to a normally bored 12 gauge, and the CTi 105 is only offered in 12 gauge. The overbored barrel also has long forcing cones. But what probably dampens recoil most is the oil-filled cylinder in the butt stock. The higher the power of the shell (the gun does have 3-inch chambers), the more efficiently this oil-cylinder works, controlling rearward movement of the bolt. That translates into less recoil. Finally, there's an R3 recoil pad on the butt stock.

The CTi 105 trigger is crisp and light, far lighter than most shotgun triggers I've shot. So that's a new innovation as well. So is the finish that goes to the receiver. Called scratch-resistant TriNyte, the appearance is sort of a dark gray, and I don't know of any other shotgun that uses this coating. The rib is extra light because it's not steel but made of carbon and aramid fibers.

You should have to clean the CTi 105 less than most semi-autos. This is because Remington engineers have pioneered ways to keep the magazine tube free of debris. They do this with a one-piece inertia gas sleeve and new gas seal. The chokes are ProBore screw-ins because of the overbored barrels. Thus, standard Rem Chokes won't work. Three ProBore chokes are provided: Improved Cylinder, Modified and Full.

Franchi 48AL

My first real grouse gun was a 20 gauge Franchi 48AL. Prior to buying that super-light semi in 1964 I had shot a hodgepodge of used and borrowed guns. However, in 1963 I shot my first ruffed grouse (while rabbit hunting), and I at once became a grouse hunter. In the middle of the next grouse season I visited a local gun shop, and fell in love with the "little" gun the moment I picked it up. Over the next eleven years that's the only gun I used on grouse, until I bought a 12 gauge Franchi 48AL.

The 20 gauge 48AL is still available today, but you can't get a 12 gauge except on the used market, and there are plenty of them. Check out www.gunbroker.com or one of the other gun-sale websites. These days you can also get a 28 gauge 48AL. Back in the 1960s, these were as scarce as the proverbial hen's teeth, as very few were ever made, and even fewer reached our side of the Atlantic. Franchi shotguns, of course, are made in Italy, as are the Benelli and Beretta shotguns.

It was lightness that made the 48AL so ideal for grouse, a sport where you carry the gun for hours (sometimes) without firing a shot. I decided early on in my grouse-hunting career that I had to carry the grouse gun in both hands, and ready to shoot. Of course, you sometimes have to use one hand to ward off the thick brush you're plowing through, but it was easy to hold the 20 gauge Franchi with only the pistol gripping hand since it only weighed a whisper over 5 pounds.

Before screw chokes, a 20 gauge Franchi with 26-inch barrel weighed right at 5.1 pounds. Today's guns with screw-ins weigh 5.3 pounds due to the slightly thicker barrels to accommodate the screw chokes. Despite their very light weight I always thought that these guns still maintained good handling qualities. I always reduced weight by more than an ounce by only feeding one round into the magazine, not two. I almost never had an opportunity to fire three shots in the grouse woods, so I figured it was easier to carry shells in my pocket than two in the magazine.

These guns operate on an old long-recoil system. The barrel moves way back into the receiver upon firing, ejecting the fired shell. A shell from the magazine drops on to the carrier, and then is fed into the chamber as the barrel slams forward. The resulting sound is sort of a "ker clunk

The 48AL is available in two versions, Field and Deluxe, in various barrel lengths. Top is Field 28GA, below is Field Short 20GA.

clunk." A grouse hunting friend of mine always referred to this sound upon firing as "a near auto wreck."

As already mentioned, today you can get either a 20 or 28 gauge 48AL, both built on the same size frame, and they weigh about the same. There's a deluxe model with straight grip and a nice wood upgrade. If you are interested in getting one for your wife or youngster there's a youth model with shorter 12.5-inch stock. And I do recommend this gun for youngsters or anyone of smaller stature. Such folks will love the gun's lightness.

This Franchi has 2-3/4-inch chambers and three screw chokes are included: Improved Cylinder, Modified and Full. I would add a Skeet or Cylinder choke to those three. A Cylinder screw-in is available as an option, as is an Improved Modified. After all, the 48AL is ideal for dense cover work where close shots are the rule, where it's almost always too thick to encounter a long shot. The same goes for woodcock shooting, and this is certainly a perfect timberdoodle gun.

Gun companies put a lot of effort and money into new shotguns almost every year. Then they have to spend more capital on advertising and otherwise making the gun-buying public aware of those new models. Franchi brass is somewhat surprised about the 48AL's healthy sales figures. Despite this model being around for a while, introduced in 1948, it still sells very well with very little invested in promotion.

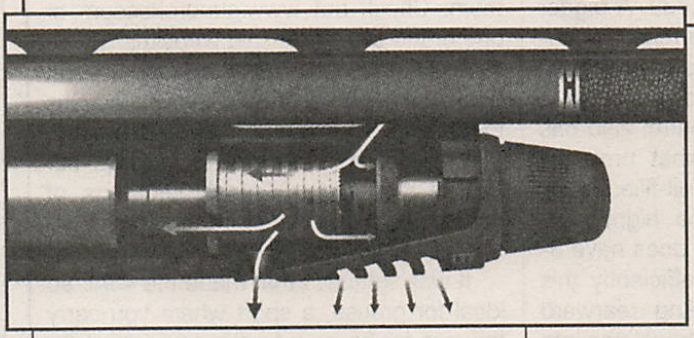
Beretta AL391 Urika 2

Since Beretta's model AL391 hit the market, which wasn't all that long ago, that gun has been the best selling semi on the face of the planet with over 1.5 million sold. Beretta claims this gun became so sought after because of its reliability, quality and ease of maintenance. I disagree. I think this model has sold so well because of feel. This is simply a great feeling semi-auto, as well as one that has won one heck of a pile of clay target trophies. If a serious sporting clays shooter uses a semi-auto, you can bet about 5 to 1 that it will be a Beretta 303, 390 or 391.

This isn't to say the 391 isn't reliable, for that's certainly a reason why so many hunters and competition shooters buy this one. But the new AL391 Urika 2 takes this semi to a new dependability level. There are several new features in the Urika 2. But the gas system is the main thing that sets the Urika 2 apart from its predecessor.

The gas system has been improved in two ways. The gas piston is what moves up and down on the magazine tube shaft, and it's different. Through innovative engineering the gas piston is fitted with a set of "teeth." Further, when the gun is fired, this new gas piston actually "spins" up and down the magazine tube shaft. This spinning of the gas piston, coupled with the built-in teeth on it, effectively removes any powder residue from inside the gas cylinder. Moreover, a series of expandable fingers expand outwardly to further clean the gas cylinder as the action cycles. The AL391 Urika was already the most reliable semi-auto on the market, but now it's going to work reliably for even longer periods between cleaning.

The left side of the receiver on the new AL391 Urika 2.



The gas system is what's so new with the Urika 2 from Beretta.

To improve the Urika 2's cosmetics the stock features a grain pattern that has been enhanced by a special process. Called X-Tra Grain, whatever grain qualities the wood has, this new process makes the walnut look even better. What the process does technically is improve the "color contrast" of the wood.

Also new is a proprietary finish to the gun's bore. This process was developed for military applications. Beretta says this new bore finish is superior in corrosion protection and wear resistance compared to traditional chrome shotgun bores. The gun will be offered in both 12 and 20 gauges. Depending upon the model Urika 2 selected and the gauge, these barrels can be fitted with Optima chokes, Optima-Plus or Mobilchokes. So far, barrels will be available in 26 and 28-inch lengths in the standard model.

Receivers have also been upgraded with different and more engraving. There's an Urika 2 Gold with engraving and gold birds as well as a wood upgrade. There will also be a waterfowl model with the Kick-Off option, Beretta's in-the-butt-stock recoil reducer that was developed for the Beretta Xtrema 2. The Kick-Off option will be offered in a synthetic stock, a Realtree Advantage Max-4 and AP models. Obviously, the Kick-Off is made to fit pre-molded composite stocks. There will be clay target models of the Urika 2 as well, including Sporting and Parallel Target models. In these latter two models, barrel choices are 28 and 30 inches, and there is a 20 gauge Sporting with 30-inch barrels.

The original AL391 Urika, as mentioned, is the best selling semi since its introduction. But these new reliability enhancements in the Urika 2 certainly take the reliability of the old 391 to new levels. Will these new gas pistons ever be offered as an option to replace the gas piston in existing original Urikas? Maybe so, but don't expect that for a year or more. Beretta will be too busy selling the Urika 2, the whole gun.

Remington's modern Model 597 LSS Stainless and Laminated Wood rimfire rifle is shown here with the author's Nylon 66 Apache Black (bottom).

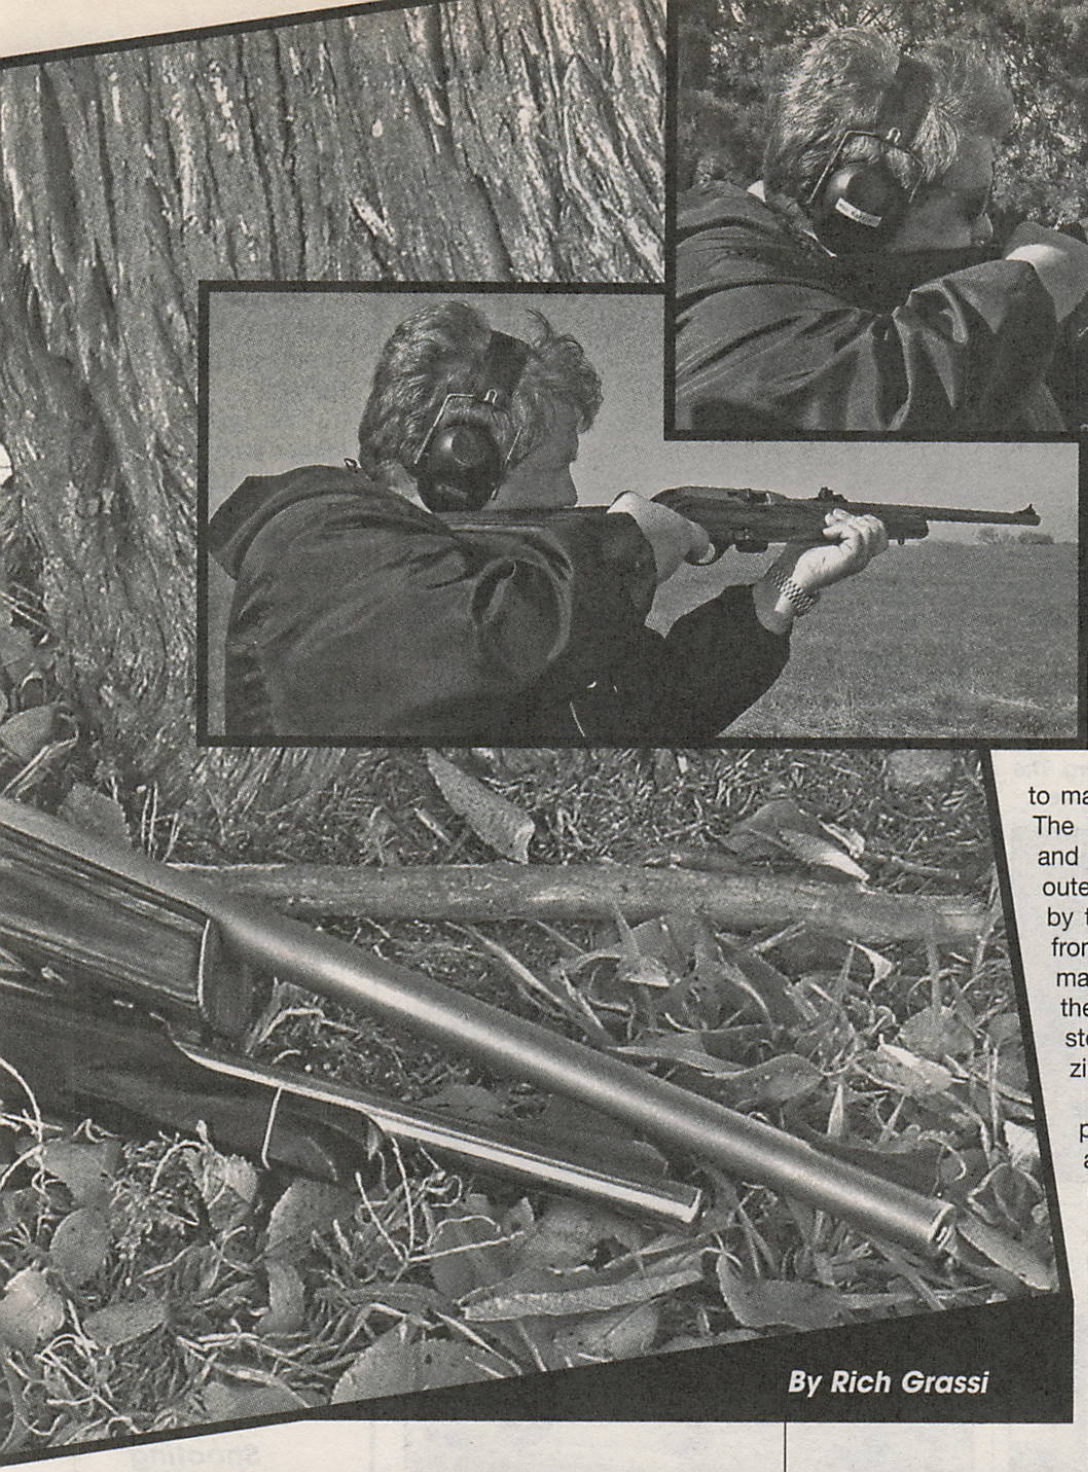
GUN TEST

A TALE OF TWO REMINGTON RIMFIRES

A classic Nylon 66 versus a factory-fresh Model 597 LSS!

A fan of the Remington Nylon 66, Mike Rafferty found the gun to be a good fit.

Mike Rafferty tries the 597 on a gusty and sunny day.



By Rich Grassi

As the new century opened, I got my father's Remington Nylon 66. I shot it some during my teenage years and was enamored of its handiness, reliability and accuracy. The Nylon 66 was discontinued in 1987, before I got around to getting one of my own.

While discussing sporting guns projects, we came to the Remington rimfire line. I thought it was appropriate to compare the fast handling, quick shooting Remington of old against their newer 1997-and-since Model 597 LSS.

Nylon 66 Details

One of the most durable firearms in history, the Nylon 66 was introduced in 1959. Very advanced for its era, the Nylon 66 was composed of "new space age materials."

Made of Zytel, Dupont's "Nylon 66," the structure of the rifle is nearly all plastic. The receiver, stock and forend are two pieces of Zytel bonded and pressure treated into a single unit. Similarly, the trigger, triggerguard, operating handle and safety button are also made of nylon.

The Remington Nylon 66 has a sheet metal cover attached over the nylon receiver structure to make it appear to be made of steel. The barrel, bolt, sights, springs, sear and firing pin are made of steel. The outer magazine tube is brass. Covered by the stock, the magazine comes in from the back. It holds 14 rounds. This makes it easier to load while keeping the muzzle pointed downrange. The stock also protects the brass magazine tube from dents.

The Remington Nylon 66 was produced in some variations. While a good history of the gun could be repeated, that's not the point of the present project. Suffice to say, the "Apache Black" version of the Nylon 66 appeared in 1962. That's the type my father purchased.

The nylon parts are black, originally high gloss in appearance, now dulled with handling, use and age. The receiver cover and barrel are bright nickel or chrome plated.

The manual safety is the proper setup; it's tang mounted and made as a sliding button. Commonly found on some sporting shotguns, the safety lays under the shooting thumb. Push forward to fire; pull it back to prevent the piece from firing.

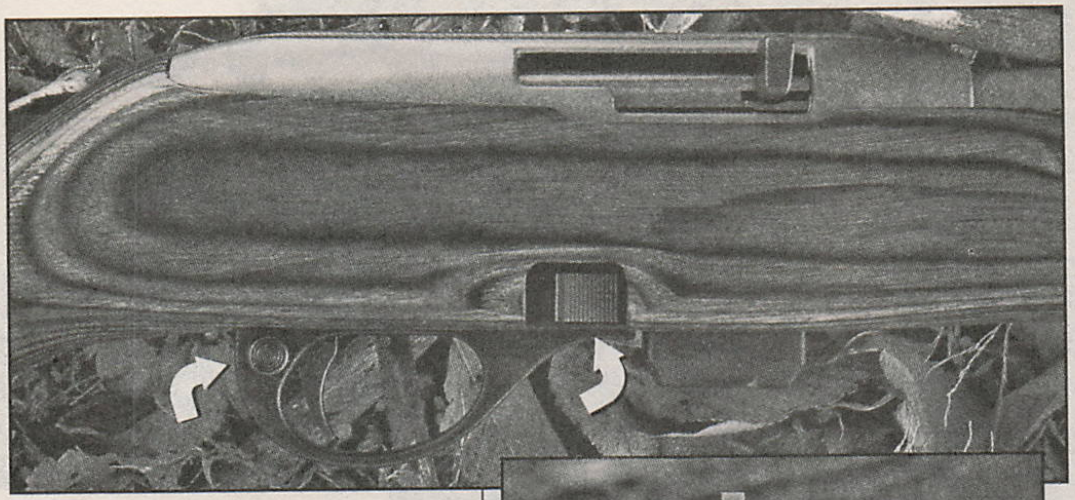
It's a 4-pound rimfire, and a wonderful gun. I found it to be light, handy, quick to mount and quick to hit my target. It's more accurate than many autoloading .22s.

Was it popular? According to Remington's Firearm Model History, they produced 1,050,350 of them.

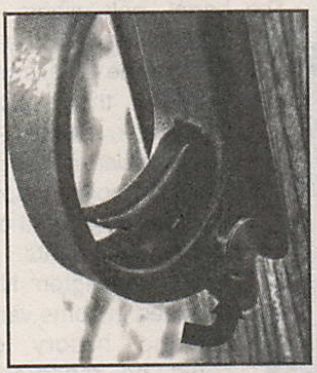
597 LSS Details

Remington and I kicked around the exact type of Model 597 that we should compare to the Nylon 66, but it came down to what was immediately available. It was something that worked out quite well.

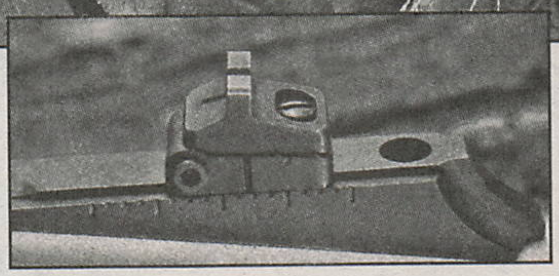
The stainless 597 with laminated stock was built for durability. In fact, Remington advertising indicates they



Remington's Model 597 LSS has a stainless steel barrel, a gray matte finished receiver and a laminated stock. The crossbolt safety appears at the back of the triggerguard. The sliding mag release latch is shown above and behind the mag floorplate.

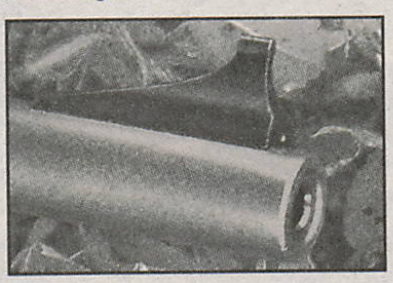


The cross-bolt safety is found behind the trigger-guard. The red ring is showing, indicating the safety is "off."

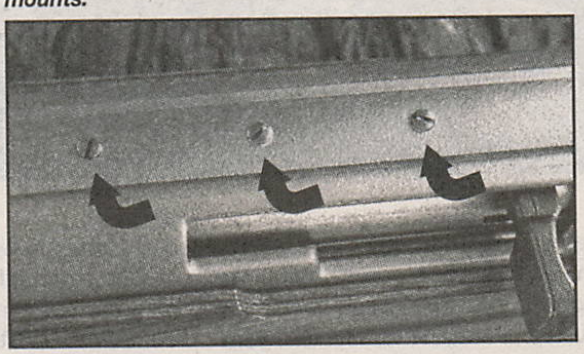


The "big-game-rifle-looking" rear sight is a spitting image of that on the Remington Model 700 rifle line.

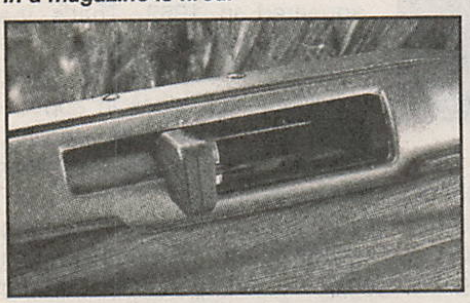
The 597 has a target crowned muzzle.



The top of the receiver is grooved, drilled and tapped for rimfire scope mounts.



The Remington Model 597 has a bolt that holds open when the last round in a magazine is fired.



were seeking an "innovative new autoloading rimfire rifle with a centerfire attitude." The 597 has all that.

The length of pull is a bit long for me and for shooting partner Mike Rafferty.

The barrel is barely longer than the Nylon 66 at 20 inches. The wood stock is made of laminated wood, known for strength. The receiver is made of alloy and finished in a matte gray. The receiver is grooved for telescopic sights, and it's drilled and tapped for rimfire bases.

The bolt is nickel plated for slickness. It runs along twin steel guide rails. The detachable box magazine is a double-stack affair and holds 10 rounds of .22LR. When the magazine is fired empty, the bolt holds open.

The sear and hammer are Teflon-nickel plated for smoothness of operation.

The 597's sights are listed as "adjustable big game iron sights." Funny they should mention that; as Mike Rafferty looked at the rifle right out of the box and said, "That's a sight from a Model 700."

Shooting Impressions

We selected a sunny but gusty day to try the pair out. Dad's old Nylon 66 against the factory-fresh Model 597 LSS.

I found the act of working with rimfires to be calming. Little recoil, no blast and lots of fun. We realized that we weren't seeing the sights very well and eventually moved up to 25 yards to give us a chance to work with the small caliber rifles.

I discovered that we were both shooting way high with each Remington. I know the Nylon 66 was nearly center with many loads as of the last time I shot it. The sun was over our shoulders glaring onto the front sights. That and the wind account for our excuses. Mike tried to adjust the 597's rear sight, but it changed little. This makes me believe that the fault was with the shooters.

The rifles both worked very well, consuming two types of Remington .22 ammo, as well as CCI Mini-

PERFORMANCE
REMINGTON .22LR

	Accuracy	
Load	**597 LSS**	**Nylon 66**
CCI Mini-Mag	1.00	1.50
Remington 33 Yellow Jacket	3.00	1.88
Remington 40 Thunderbolt	1.88	2.00

Bullet weight measured in grains and accuracy in inches for 5-shot groups from field sitting position at 25 yards.

Mags. Shooting from a seated field position with no rest, we found that the new gun was slightly more accurate with Mini-Mags than the older Remington. The same result was observed with Remington's low-cost Thunderbolt 40-grain lead roundnose ammo. The Nylon 66 liked the Remington 33-grain truncated hollow-point "Yellow Jacket" load better than the 597 did. Different guns shoot the same ammo differently.

The new gun was the champ in two out of three loads tried. The best group of the day, the 597 LSS with CCI Mini-Mags, was only an inch for five shots. I feel that the 597 with glass would equal that group at longer ranges with a stable rest.

The guns were shot like we'd likely use them in the field. The groups aren't bad. The sole load that the Nylon 66 bested the new gun with was the high velocity Yellow Jacket. A powerful small game and vermin load, it was simply a preference thing. Rimfire rifles seem to be that way; they are quite accurate with a particular load or they aren't. The load that doesn't do well in your gun may be the accuracy champ in mine.

The great thing about rimfires, aside from the low cost, low-stress shooting enjoyment, is that you can afford to find the accuracy load for your gun without breaking the bank.

I'm a fan of both options, but I don't see one as replacing the other. There's more than enough room for both guns.

Mike Rafferty, never shy to give his opinion, shook his head as he examined my father's old Nylon 66. "You know," he said, "with the new polymers, metal injection technology, they could make this very cheaply today. They'd work forever and sell like hotcakes." I think they owe us a couple of million more.

We both found the 597's stock to be on the long side. "I could fix that," Mike said. "I like it," he went on, examining the 597. "The trigger breaks nice." Mike seldom says nice things about a maker's triggers. This was a rare utterance indeed.

"I love the magazine," he said, unknowingly concurring with my take on it. It's easy to load, easy to use and ejects convincingly when you want it to.

He found the barrel weight to be just right for gun and caliber. "Even with the over-long stock," he concluded, "the 597 LSS balances well and comes up quick."

A relative newcomer, the Model 597 was introduced in 1997, a nine-year-old at the time of this writing. It's available as a .22LR, like our sample and is also made in .22 Magnum and .17HMR calibers.

They've done special runs, somewhat similar to the Nylon 66 line, including a run commemorating Dale Earnhardt and another for Dale Earnhardt Jr.

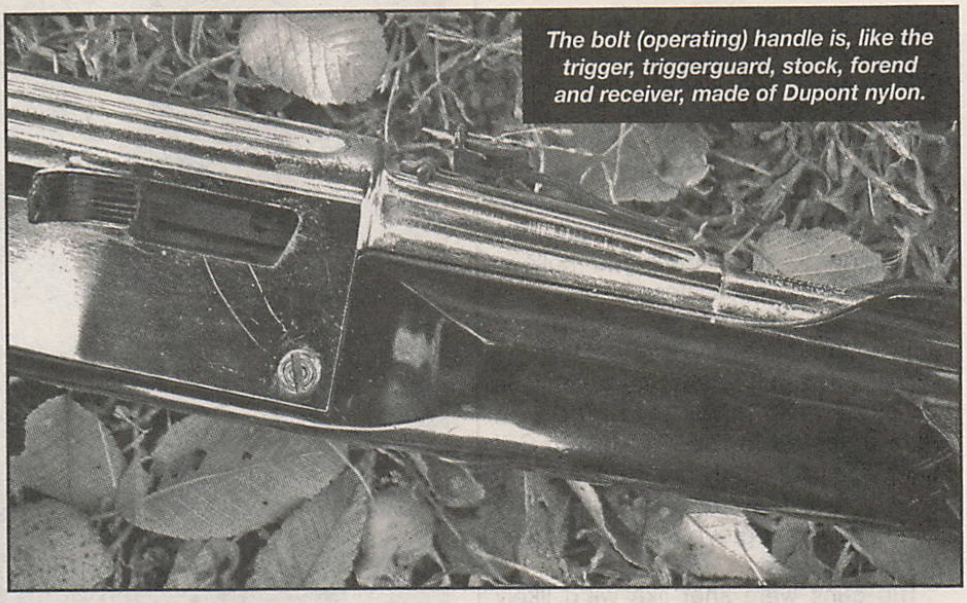
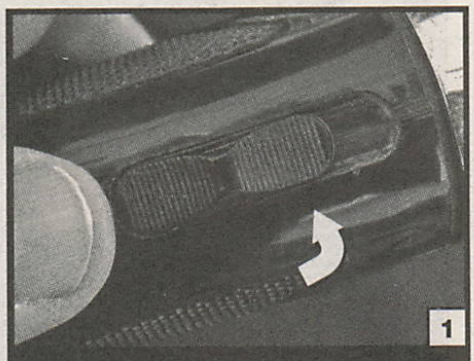
597 Dale Earnhardt Jr. #8 special run (2000)
597 Camo special run (2000)
597 DU special run (2000)
597 LS HB (2001 - Present)
597 Magnum LS HB (2001 - Present)
597 Limited Edition Earnhardt Combo (2004)



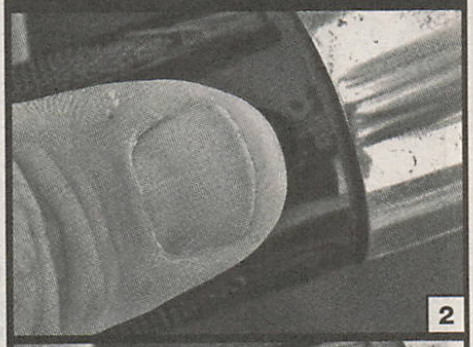
The bolt (operating) handle is, like the trigger, triggerguard, stock, forend and receiver, made of Dupont nylon.



(1) The safety on the Nylon 66 is a sliding, tang-mounted button, shown here "on safe."

(2) Pushing the safety forward, "in the direction you want the bullets to go," takes the gun off safe.

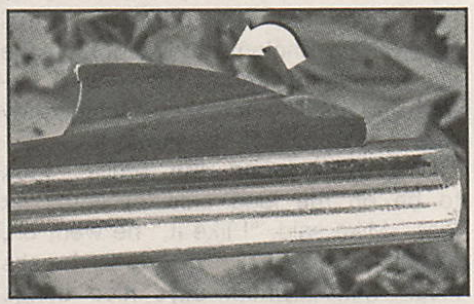
(3) With the safety forward, in the "fire" position, a red dot shows.



Final Notes

The Model 597 isn't really a replacement for the fine old Nylon 66. It is a special model in its own right. It deserves a place in your rifle rack.

For more information, contact Remington Arms Company, 870 Remington Drive, PO Box 700, Dept CH, Madison, NC 27025; 800-243-9700; www.remington.com



The Nylon 66 front sight has a rakish appearance from the side, appears as a Patridge from the rear.

The Nylon 66 has an adjustable rear sight.

Caliber: 6.5 Grendel, .50 Beowulf. **Barrel:** 16", 19.5", 24", 28". **Weight:** 6.1-10 lbs. **Stocks:** Fiberglass reinforced polymer. **Sights:** None, Picatinny rail. **Features:** AR15 compatible semi-auto gas operated, 9 basic Grendel and 5 Beowulf models, Grendel has operating range to 1400 yards, Beowulf is capable of firing projectiles up 530 grains, forged and hard anodized upper and lower receiver, flat top receiver, stainless steel or chrome lined barrels, 4/7/10/26-shot mag. **Price:** Beowulf $1197-1549, Grendel $999-$3299.

ARMALITE AR-10

Caliber: .308, .300RSAUM. **Barrel:** 16", 20", 24". **Weight:** 8.4-10.8 lbs. **Stocks:** Composite. **Sights:** M16 style or gas block front base, battle or none rear, some models come w/ scope mount. **Features:** Semi-auto, gas operated, 6 configurations including New Super SASS, National Match two-stage trigger, barrel is chrome lined (medium available) or stainless, upper receiver is A2 or flattop, black or green finish, one 10/20-shot mag. **Price:** $1506-2828.

ARMALITE M-15

Caliber: .223, 5.56mm. **Barrel:** 16", 20", 24". **Weight:** 7-9.2 lbs. **Stocks:** Composite. **Sights:** M16 style or gas block front base, field, NM or none. **Features:** Semi-auto gas operated, 7 configurations, National Match two-stage trigger, upper receiver is A2 or flattop, TN has free floating fiberglass handguard, A2 Rifle has double-lapped and chrome lined barrel and comes w/ bayonet lug and flash suppressor, A2 National Match has triple-lapped barrel and floating barrel sleeve, green or black finish, 10/30-shot mag. **Price:** $1100-1504.

ARMALITE AR-180B

Caliber: .223, 5.56mm. **Barrel:** 20". **Weight:** 6 lbs. **Stocks:** Polymer. **Sights:** Rear adjustable for windage, small and large apertures. **Features:** Semi-auto gas operated, chrome moly barrel, best features of AR-15/M-15 and early AR-180s, interchangeable upper and lower receiver groups, standard AR-15/M-15 mag and trigger group, black furniture, 10-shot mag. **Price:** $750.

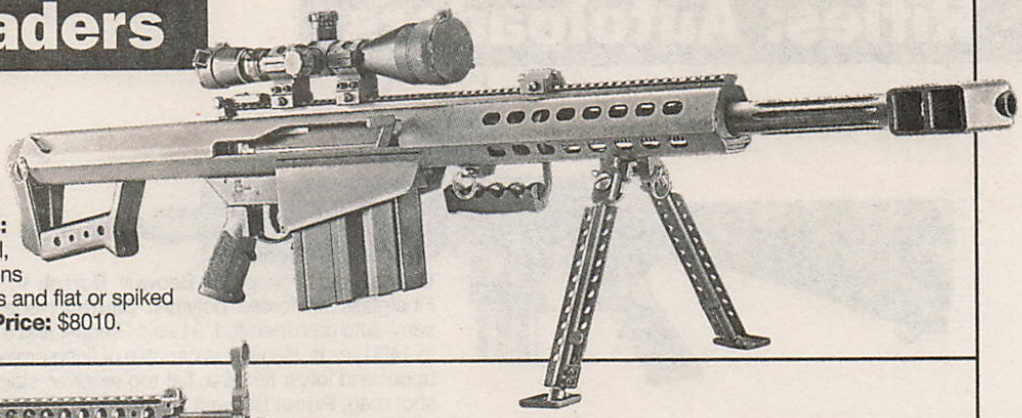
ARMSCOR

Caliber: .22LR. **Barrel:** 18.25". **Weight:** 6.5-7 lbs. **Stocks:** Wood, polymer. **Sights:** Post front, adjustable rear on AK22, peep rear on M1600. **Features:** Semi-auto, 2 models available, 6-groove right hand twist barrel, rubber butt pad, blue or stainless finish, 10-shot mag. **Price:** $178-239.

AUTO-ORDNANCE M1 CARBINE

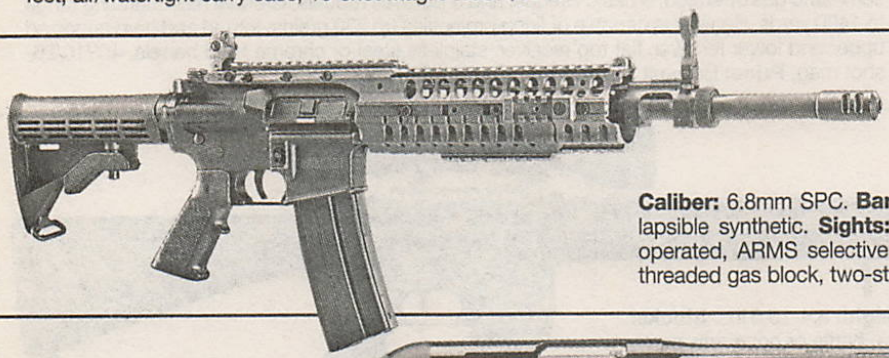
Caliber: .30. **Barrel:** 18". **Weight:** 5.4 lbs. **Stocks:** Birch, walnut. **Sights:** Blade front, flip style rear. **Features:** Semi-auto, gas operated, 4 configurations, parkerized steel receiver, parkerized finish, 10/15-shot mag. **Price:** $768-777. From Kahr Arms.

Rifles: Autoloaders



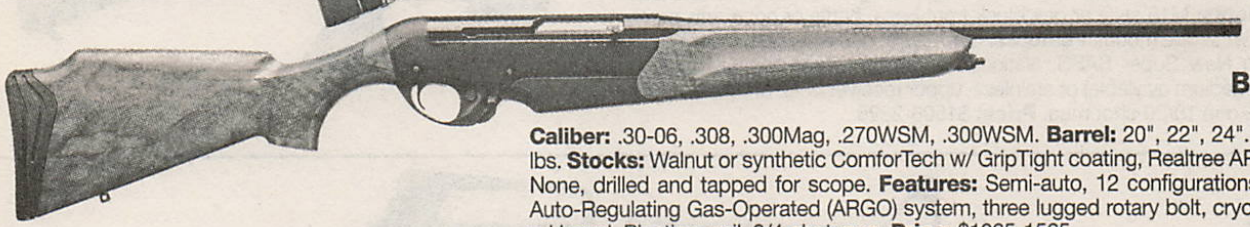
BARRETT M82A/M107

Caliber: .50. **Barrel:** 20", 29". **Weight:** 29.5-31.78 lbs. **Stocks:** Synthetic. **Sights:** Front wide post, adjustable iron rear. **Features:** Semi-auto, 2 models available, short recoil, match grade barrel, M1913 rail, several options available, detachable bipod w/ adjustable legs and flat or spiked feet, air/watertight carry case, 10-shot mag. **Price:** $8010.



BARRETT M468

Caliber: 6.8mm SPC. **Barrel:** 32", 35.5". **Weight:** 8.45 lbs. **Stocks:** Fully collapsible synthetic. **Sights:** Folding rear/front sight. **Features:** Semi-auto, gas operated, ARMS selective integrated rail, dual spring extractor, muzzle brake, threaded gas block, two-stage trigger, 5/10/30-shot mag. **Price:** $2700.



BENELLI R1

Caliber: .30-06, .308, .300Mag, .270WSM, .300WSM. **Barrel:** 20", 22", 24". **Weight:** 7-7.3 lbs. **Stocks:** Walnut or synthetic ComforTech w/ GripTight coating, Realtree APG HD. **Sights:** None, drilled and tapped for scope. **Features:** Semi-auto, 12 configurations, self-cleaning Auto-Regulating Gas-Operated (ARGO) system, three lugged rotary bolt, cryogenically treated barrel, Picatinny rail, 3/4-shot mag. **Price:** $1265-1565.

BERETTA Cx4 STORM

Caliber: 9mm, .40, .45ACP. **Barrel:** 16.6". **Weight:** 5.75-7.75 lbs. **Stocks:** Synthetic. **Sights:** Post front adjustable, rear ghost ring with two size apertures. **Features:** Semi-auto blowback, 7 configurations, reversible crossbolt safety, mag button, bolt handle and ejection, rubber recoil pad, retractable forward accessory rail, accepts full size Beretta pistol mags, many options available, 8/10/11/14/17-shot mag. **Price:** $800-850.

BERETTA Rx4 STORM

Caliber: .223. **Barrel:** 16.6". **Weight:** 5.75-7.75 lbs. **Stocks:** 5-position telescoping collapsible, optional fixed pistol grip. **Sights:** Ghost ring w/ protective ears adjustable. **Features:** Semi-auto, joint effort w/ Benelli, uses Auto-Regulating Gas-Operating (ARGO) system, reversible crossbolt safety, ambi bolt release, reversible mag release button, 10-shot (plugged to 5) mag, also accepts 30-shot mags. **Price:** TBA.

BROWNING BAR

Caliber: .243Win, .25-06, .308, .270WSM, 7mm Rem, 7mmWSM, .300Win Mag, .300WSM, .270Win, .30-06, .338Win Mag. **Barrel:** 20", 22", 23", 24". **Weight:** 6.1-8.6 lbs. **Stocks:** Walnut, composite w/ DuraTouch Armor in Mossy Oak New Break-Up Camo or matte black finish. **Sights:** None, scope mount, Lightweight has gold bead, rear fixed blade. **Features:** Semi-auto gas operated, SHORTTRAC and LONGTRAC actions w/ new left-handed models available, 52 configurations, steel or aluminum alloy receiver, seven lug rotary bolt, crossbolt safety, optional Ballistic Optimizing Shooting System (BOSS), recoil pad, detachable mag, 5/4/3-shot mags. **Price:** $927-1122.

BROWNING BUCK MARK/SA22

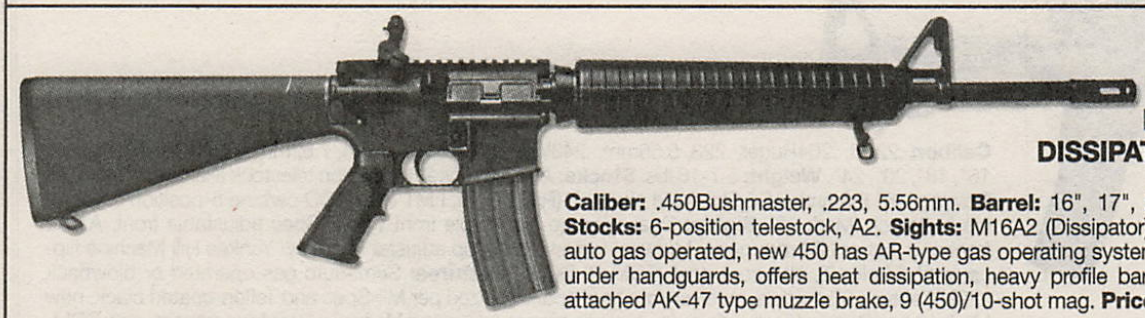
Caliber: .22LR. **Barrel:** 18", 19.25". **Weight:** 4.6-5.8 lbs. **Stocks:** Walnut, gray laminate hardwood. **Sights:** None, integral rail scope mount, Sporter has TruGlo/Marble's fiber optics, SA22 has front gold bead, rear folding leaf adjustable. **Features:** Semi-auto, Buck Mark has straight blowback design, available in heavy bull (Target model), hand reamed chambers, SA22 is takedown autoloader w/ bottom ejection design, available in 3 grades, manual trigger-blocking safety, 11/12(SA22)-shot mag. **Price:** $583-601, SA22 $557-1191.

BUSHMASTER CARBON-15

Caliber: .22LR, 9mm, .223, 5.56mm. **Barrel:** 16". **Weight:** 4-5.7 lbs. **Stocks:** Carbon fiber composite, 6-position telestock. **Sights:** Various iron. **Features:** Semi-auto gas operated or blowback (.22, 9mm), 11 configurations, stainless barrel, some have quick detach stocks and compensators, hard chrome bolt/carrier, 30-shot mag, accepts any AR-15/M16 type mag. **Price:** Rimfire $790, $990-1155.

BUSHMASTER XM15

Caliber: .223, 5.56mm. **Barrel:** 16", 20", 24". **Weight:** 5.8-13.06 lbs. **Stocks:** 6-position telestock, A2 (Target), "stubby" (SuperLight), Ace Skeleton (Modular), Hogue (Predator), polymer, adjustable Palm Swell (Varmint). **Sights:** Detachable dual aperture rear flip-up (Modular), A2 adjustable, Target A3 has rear adjustable, competition front (DCM), M16A2 dual aperture rear, iron on VMatch, none on Varmint, optional optics for ORC. **Features:** Semi-auto gas operated, over 30 configurations available, BMAS (Bushmaster Modular Accessories System) on Modular models, SuperLights have adapted barrel design, some models have two-stage competition trigger, steel components are manganese phosphate coated, Picatinny rails, ORC has A2 bird cage suppressor and receiver-length Picatinnys, (Varminter)/10(DCM)/30-shot mag, accepts all M16/AR15 type mag. **Price:** $1105-1745.



BUSHMASTER 450/ DISSIPATOR/"AK" CARBINE

Caliber: .450Bushmaster, .223, 5.56mm. **Barrel:** 16", 17", 20". **Weight:** 7.56-8.5 lbs. **Stocks:** 6-position telestock, A2. **Sights:** M16A2 (Dissipator) system. **Features:** Semi-auto gas operated, new 450 has AR-type gas operating system, Dissipator has gas block under handguards, offers heat dissipation, heavy profile barrel, "AK" has permanently attached AK-47 type muzzle brake, 9 (450)/10-shot mag. **Price:** 450 TBA, $1120-1265.

CMMG

Caliber: 5.56mm. **Barrel:** 16", 18", 20". **Weight:** 5.6-9.2 lbs. **Stocks:** Mil-Spec or 6-position ribbed reinforced, A2. **Sights:** A1 or A2 post, standard front base. **Features:** Semi-auto gas operated, 5 models, 12 configurations, Mil-Spec fire control group and take-down pins, extended feed ramp cuts for M10 and M18, parkerized finish, two 30-shot mags **Price:** Starts at $1025.

COBB MCR

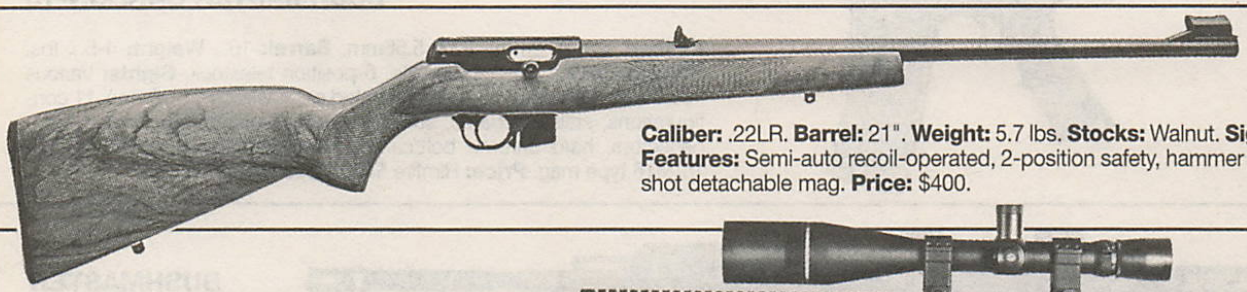
Caliber: 9mm, .45ACP, .223, .30-06, .308, .338Federal, .338Lapua Mag. **Barrel:** 24", 30". **Weight:** 8-16 lbs. **Stocks:** SRS fully adjustable. **Sights:** None. **Features:** Semi-auto, AR-type gas operation, Mil-Spec M1913 rail, Multi-Caliber Rifle (MCR) is interchangeable in 4 different models by changing upper receiver and mag module, free floating Lothar-Walther barrel, interchangeable AR-type trigger group parts with standard AR-15s, five 20-shot mags. **Price:** $1995-6995.

Rifles: Autoloaders

COLT

Caliber: .223. **Barrel:** 16", 16.1", 20", 24" (Accurized). **Weight:** 7.1-9.25 lbs. **Stocks:** Polymer. **Sights:** None on Accurized Rifle, adjustable post front, rear adjustable. **Features:** Semi-auto gas operated, multi-lug rotary locking bolt, 7 models, flat top receiver for scope mounting (except for Match Target HBAR), compensator (except for Match Target Competition HBAR II and Accurized), matte finish (w/ stainless steel barrel on Accurized), 9-shot mag. **Price:** $1290-1470.

CZ 511

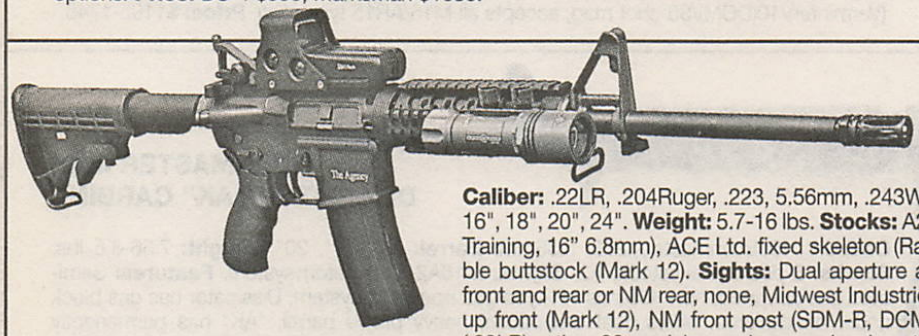


Caliber: .22LR. **Barrel:** 21". **Weight:** 5.7 lbs. **Stocks:** Walnut. **Sights:** Fixed iron. **Features:** Semi-auto recoil-operated, 2-position safety, hammer forged barrel, 8-shot detachable mag. **Price:** $400.

DOUBLESTAR CORP DS-4/MARKSMAN

Caliber: .223, 5.56mm. **Barrel:** 16", 20". **Weight:** 6.75-8.9 lbs. **Stocks:** Telescoping fiber-reinforced polymer DS-4 6-position, Magpul PRS adjustable (Marksman). **Sights:** A-2 adjustable rear w/ A-2 front post (DS-4). **Features:** Gas operated rotating bolt, hard coat anodized per Mil-Spec and Teflon-coated black aluminum alloy receivers, semi-auto trigger group (2-stage match for Marksman), DS-4 has manganese phosphated chrome moly barrel and DS-4 handguards w/ double heat shield, Marksman has stainless steel Wilson Arms premium barrel, improved Picatinny rail gas block, and Daniel Defense 12.0 free floating quad rail handguard, many custom options. **Price:** DS-4 $890, Marksman $1680.

DPMS PANTHER



Caliber: .22LR, .204Ruger, .223, 5.56mm, .243Win, .260Rem, 6.8mm, 7.62mm, .300RSAUM. **Barrel:** 16", 18", 20", 24". **Weight:** 5.7-16 lbs. **Stocks:** A2 black Zytel, 6-position telestock (Pardus, AP4 .22LR Training, 16" 6.8mm), ACE Ltd. fixed skeleton (Race Gun), LMT SOPMOD carbine 5-position collapsible buttstock (Mark 12). **Sights:** Dual aperture adjustable front w/ Mil-Spec adjustable front, A1/A2 front and rear or NM rear, none, Midwest Industries flip-up adjustable rear w/ Yankee Hill Machine flip-up front (Mark 12), NM front post (SDM-R, DCM). **Features:** Semi-auto gas operated or blowback (.22LR) action, 32 models, receivers are hard coat anodized per Mil-Spec and Teflon-coated black, new Mark 12 has Panther flash hider w/ two-stage trigger group and Magpul winter triggerguard, new SDM-R has birdcage flash hider, many options available, two 10/19/30-shot mags. **Price:** $710-1996.

DPMS PANTHER 308

Caliber: .308. **Barrel:** 16", 18", 24". **Weight:** 8.5-11.3 lbs. **Stocks:** A2 black Zytel, AP4 6-position telescoping fiber reinforced polymer (LR-308AP4). **Sights:** None, mounting optics only, A2 front w/ detachable rear (LR-308AP4). **Features:** Semi-auto gas operated with rotating bolt, 5 models, stainless steel or chrome-moly steel barrel (bull or heavy), upper receiver is snag free w/ no forward assist w/ Picatinny rail, A3-style flattop (LR-308AP4, LRT-SASS), integral triggerguard, LRT-SASS has Panther flash hider and Panther tactical grip, two 19-shot mag. **Price:** $1149-2099.

DSA SA58

Caliber: .260Rem, .243Win, .308. **Barrel:** 16.25", 18", 21". **Weight:** 8.3-13 lbs. **Stocks:** Synthetic, X-series, folding para, hardwood. **Sights:** Elevation adjustable protected front, adjustable peep rear. **Features:** Semi-auto gas operated, 11 models in Original, Stainless Steel, Tactical or Hunter, Picatinny rail, fully adjustable gas system, forged steel receiver, various DuraCoat finishes w/ NP3 self lubricating coating optional, many options available, 5/10/20-shot mag. **Price:** $1850-2095.

DSA ZM4 AR/Z4 GAS TRAP CARBINE

Caliber: .223, 5.56mm. **Barrel:** 16", 20", 24". **Weight:** 6.25-10 lbs. **Stocks:** Synthetic, collapsible CAR (MRP), 6-position Tactical CAR (Z4 Gas Trap). **Sights:** Forged front w/ lug, gas block sight base (S1), removable front w/ flip-up rear battle (Z4 Gas Trap). **Features:** Semi-auto gas operated, 10 models, D4 or A2 handguard w/ heatshield, S1 and DCM have NM 2-stage trigger, free floating aluminum tube (DCM) or barrel (MRP), MRP has LMT enhanced bolt and dual extractor springs, quick change barrel system, various DuraCoat finishes w/ NP3 self lubricating coating optional, Z4 Gas Trap has corrosion resistant gas trap system, Picatinny P4X quad rail, many options available, 10/20/30-shot mag. **Price:** $1025-2740, Z4 Gas Trap $1700.

ENTREPRISE

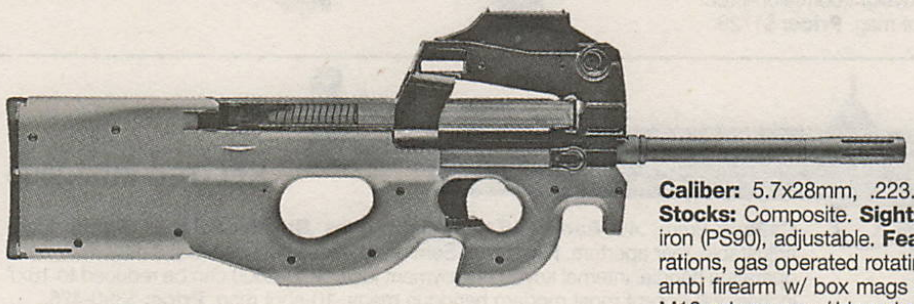
Caliber: .308. **Barrel:** 16.5", 21", 24". **Weight:** 8.5-13 lbs. **Stocks:** Synthetic. **Sights:** Peep sight, elevation adjustable. **Features:** Semi-auto gas operated, 17 configurations including new Imbel model, ZeroClimb muzzle brake, billet hammer, gas piston and ejector block, black oxide finish, 10-shot mag. **Price:** $899-1999.

EXCEL ARMS ACCELERATOR

Caliber: .17HMR, .22Mag. **Barrel:** 18". **Weight:** 8 lbs. **Stocks:** Polymer. **Sights:** Red dot, Weaver mount. **Features:** Semi-auto, stainless steel bull barrel, aluminum shroud, stainless steel construction, manual safety, firing pin block, 9-shot mag. **Price:** $498.

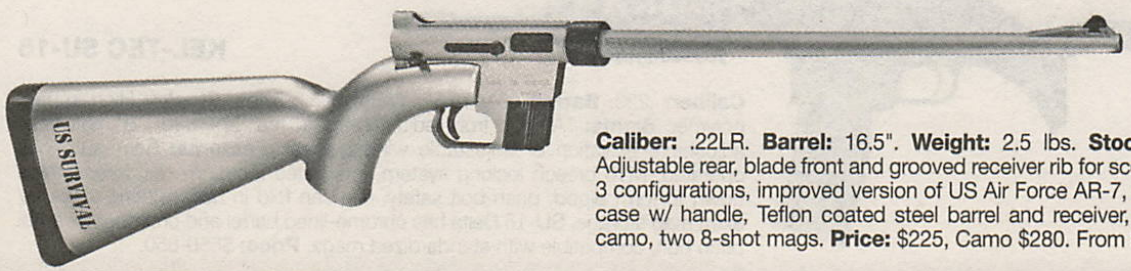
FEATHER USA RAV

Caliber: .22LR, 9mm, .40, .45ACP. **Barrel:** 17". **Weight:** 3-5.5 lbs. **Stocks:** Polymer, aluminum. **Sights:** None, scope mount. **Features:** Semi-auto carbine with modular design for upgrades, tapered barrel with full radius nose and crown, nickel, gray and camo finish, optional scope, rail, rings, laser, bipod and shroud, 10-round mag. **Price:** $399-899.



FN PS90/FS2000 BULLPUP

Caliber: 5.7x28mm, .223. **Barrel:** 16.04", 17.4". **Weight:** 6.56-7.6 lbs. **Stocks:** Composite. **Sights:** Non-magnifying optical reflex and emergency iron (PS90), adjustable. **Features:** Semi-auto blowback (PS90), 20 configurations, gas operated rotating bolt lock-up (FS2000), M1913 rail, PS90 is an ambi firearm w/ box mags that run horizontally across the top, FS2000 has M16-syle mags w/ hinged access port at the rear of the receiver, OD green or black finish, 10/30-shot mag. **Price:** PS90 $2075-2330, FS2000 $2670.



HENRY US SURVIVAL RIFLE

Caliber: .22LR. **Barrel:** 16.5". **Weight:** 2.5 lbs. **Stocks:** ABS plastic. **Sights:** Adjustable rear, blade front and grooved receiver rib for scope. **Features:** Semi-auto, 3 configurations, improved version of US Air Force AR-7, corrugated plastic carrying case w/ handle, Teflon coated steel barrel and receiver, finishes in black, silver or camo, two 8-shot mags. **Price:** $225, Camo $280. From Henry Repeating Arms.

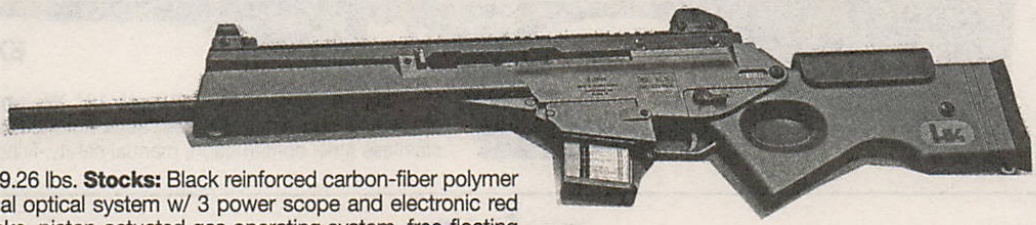
Rifles: Autoloaders

HI-POINT CARBINE

Caliber: 9mm, .40. **Barrel:** 16.5", 17.5". **Weight:** 5.75-6.75 lbs. **Stocks:** Polymer. **Sights:** Fully adjustable rear peep. **Features:** Semi-auto, 21 configurations, thumb safety, available in black, chrome and camo finishes, many options and accessories offered, 10-shot mag. **Price:** $199-299. Hi-Point Firearms Rifles marketed by MKS Supply.

HIGH STANDARD AR-15 MIL-SPEC

Caliber: .223, 5.56mm. **Barrel:** 16", 20". **Weight:** 7.3-8 lbs. **Stocks:** Black synthetic, fixed or 4-position telestock. **Sights:** Front adjustable for elevation, rear adjustable. **Features:** Semi-auto, 4 models, 6 configurations, Picatinny rail, 2-position safety, metal-lined handguard, bayonet lug, birdcage-style flash suppressor, flat top models have receivers that allow scope mounting or adjustable sight carry handle, hard coat anodized matte black finish, 30-shot mag. **Price:** $890-990.



HECKLER & KOCH SL8-6

Caliber: .223. **Barrel:** 20". **Weight:** 9.26 lbs. **Stocks:** Black reinforced carbon-fiber polymer thumbhole. **Sights:** Open sights, dual optical system w/ 3 power scope and electronic red dot. **Features:** Semi-auto, short stroke, piston-actuated gas operating system, free-floating cold-hammer forged heavy barrel, ambi bolt cocking handle, ambi safety/selector lever, extended and short Picatinny rail mounts, limited production, 10-shot mag. **Price:** $2449.

HECKLER & KOCH USC

Caliber: .45ACP. **Barrel:** 16". **Weight:** 6 lbs. **Stocks:** Gray skeletonized w/ rubber chest rest and recoil pad. **Sights:** Adjustable. **Features:** Semi-auto blowback action, cold hammer forged target barrel, molded-in hard points for mounting accessories, Picatinny rail, ambi safety/selector lever, oversized triggerguard, lightweight corrosion-proof polymer construction, limited production, 10-shot mag. **Price:** $1729.

KEL-TEC SUB-2000

Caliber: 9mm, .40. **Barrel:** 16.1". **Weight:** 4 lbs. **Stocks:** Polymer. **Sights:** Front adjustable, rear aperture. **Features:** Semi-auto, recessed push-bolt safety, lock-back operating handle, internal keyed deployment lock, SUB-2000 can be reduced to 16x7 inches, will accept most modern handgun mags, 10-shot mag. **Price:** $390-428.

KEL-TEC SU-16

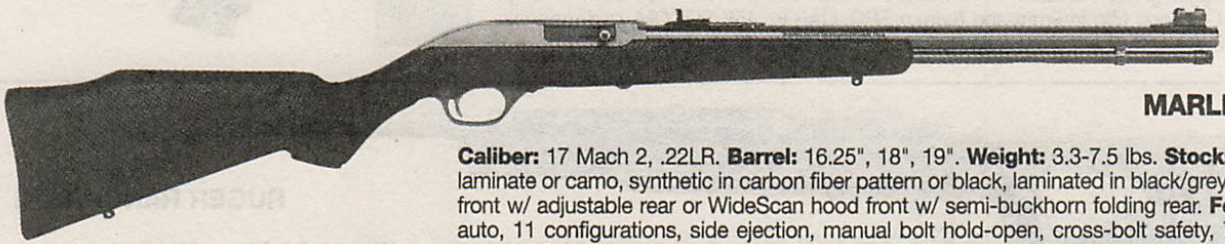
Caliber: .223. **Barrel:** 16", 18.5". **Weight:** 3.2-5 lbs. **Stocks:** High impact polymer. **Sights:** "A" has front adjustable and rear aperture, "B" has front adjustable elevation or adjustable windage rear. **Features:** Semi-auto gas operated, M16 breech locking system, integrated Picatinny rail, forend folds down to form bipod, push bolt safety, rifle can fold in half, rotating stock w/ extra mag storage, SU-16 Delta has chrome-lined barrel and chamber w/ ambi puch bolt, compatible with standardized mags. **Price:** $650-850.

LES BAER ULTIMATE AR

Caliber: .204Ruger, .223, 6.5 Grendel. **Barrel:** 16", 18", 20", 22", 24". **Weight:** 6-9 lbs. **Stocks:** Polymer. **Sights:** None. **Features:** Semi-auto gas operated, 8 models, new Grendel M4-style w/ gas block that includes rail on top and same handguards as Thunder Ranch and new Grendel Super Varmint, forged and precision machined upper and lower receivers, four-position adjustable free floating handguard w/ locking ring, aluminum gas block (w/ Picatinny rail for Super Varmint), Jewell two-stage trigger group, Baer coat alloy coating, many custom options, one 20-shot mag. **Price:** $1989-4393.

MAGNUM LITE

Caliber: 17 Mach 2, .17HMR, .22LR, .22Mag. **Barrel:** 17", 19". **Weight:** 4.25-5.9 lbs. **Stocks:** Hogue Over-Molded, walnut, Barracuda in pepper, nutmeg or forest camo. **Sights:** None, integral bases. **Features:** Semi-auto, Magnum Lite rifles have new rimfire MLR-1722 receiver that comes w/ integral scope bases, precision machining, target trigger and "Bolt Kit" that matches bolt speed to caliber, 10-shot mag. **Price:** $729-819. From Magnum Research.



MARLIN RIMFIRE

Caliber: 17 Mach 2, .22LR. **Barrel:** 16.25", 18", 19". **Weight:** 3.3-7.5 lbs. **Stocks:** Hardwood in laminate or camo, synthetic in carbon fiber pattern or black, laminated in black/grey. **Sights:** Ramp front w/ adjustable rear or WideScan hood front w/ semi-buckhorn folding rear. **Features:** Semi-auto, 11 configurations, side ejection, manual bolt hold-open, cross-bolt safety, 717M2 has clip mag, 60 Series has tubular mag, 795 Series/70PSS has nickel-plated clip mag, blued or stainless steel finish, 7/10/14-shot mag. **Price:** 795 $152-221, 60 $168-277, 717M2 $222, 70PSS $233.

MITCHELL'S BLACK LIGHTNING

Caliber: 17 Mach 2, .17HMR, .22LR, .22Mag. **Barrel:** 18". **Weight:** 8 lbs. **Stocks:** Polymer. **Sights:** Fully adjustable, M16-style iron. **Features:** Semi auto, heavy-duty, solid polymer frame, heavy-fluted barrel, full-length aluminum shroud w/ built-in Picatinny rail, scope rings included, stainless steel finish, 9-shot mag. **Price:** $595.

MOSSBERG 702 PLINKSTER

Caliber: .22LR. **Barrel:** 18", 21". **Weight:** 4.1-4.5 lbs. **Stocks:** Black synthetic, Bantam, camo, carbon fiber, walnut or tiger maple DuraWood. **Sights:** Fold down rear adjustable, scope mount. **Features:** Semi-auto, 7 configurations, dovetailed receiver for scope mounts, automatic bolt lock, crossbolt safety, blue or brushed chrome finish, 4x scope combos sets available,10-shot mag. **Price:** $138-166. From Mossberg International.

REMINGTON 552/597/750

Caliber: .17HMR, .22S/L/LR, .22Mag, .243, .270, .30-06, .35Whelen, .308. **Barrel:** 18.5", 20", 21", 22". **Weight:** 5.5-7.5 lbs. **Stocks:** Walnut, synthetic in black or grey, brown laminate. **Sights:** 552 has ramp front, adjustable rear, adjustable, scope mount. **Features:** Semi-auto, 24 configurations, rimfires (552/597) have steel guide rails, centerfires (750) rotary-bolt lock-up design, M597 10(LR)/8(Mag)-shot mag, M522 15/17/20(LR/L/S)-shot capacity. **Price:** Rimfires $188-597, Centerfires $732-831.

Rifles: Autoloaders

ROBINSON ARMAMENT M96/VEPR/XCR

Caliber: .223, .308, .308Super, 5.45x39mm, 6.8mm SPC, 7.62x39mm. **Barrel:** 16", 16.5", 17.25", 20.5". **Weight:** 7.25-9 lbs. **Stocks:** Wood, black, tan or green polymer, XCR-L has folding or retractable. **Sights:** Fully adjustable. **Features:** Semi-auto gas operated, 12 configurations, two stage trigger, muzzle brake, black matte finish, M96 available with top feed configuration, VEPR has RPK type receiver with extra reinforcement, accepts standard AK47 mags, XCR-L has user changeable barrels and calibers, ambi selector, mag release and bolt catch, many options and accessories available, accepts standard M16 mags. **Price:** VEPR $549-699, M96 $1599-1899, XCR starts at $1299.

RRA LAR

Caliber: 9mm, .223, .223 Wylde chamber, 6.8mm SPC, .308, .458SOCOM. **Barrel:** 16", 18", 20", 26". **Weight:** 7-11.6 pounds. **Stocks:** RRA 6-position tactical CAR, CAA 6-position, A2, ACE FX and FX-E. **Sights:** A2, optional flip-up back-up. **Features:** Semi-auto, over 20 configurations, two-stage NM trigger group standard on all models except 9mm, CAR, mid- and rifle-length models in .223, CAR and Mid in 9mm and 6.8mm SPC, CAR in .458 SOCOM, mid- and rifle-length in .308, A2, A4, UTE-2 and EOP, many options. **Price:** $875-1350. From Rock River Arms

RUGER RANCH/MINI

Caliber: .223, 7.62x39mm. **Barrel:** 18.5", 22" (Mini-14 Target). **Weight:** 6.5-9.5 lbs. **Stocks:** Hardwood, synthetic, laminate (Mini-14). **Sights:** Protected front blade w/ adjustable ghost ring rear, none (Mini-14), integral scope bases. **Features:** Semi-auto gas operated, 5 configurations, Ranch and Mini-Thirty has side ejection to clear low-mounted scopes, patented recoil buffer system, Ruger scope rings, Mini-14 has hammer forged, heavy matted stainless steel target barrel, recessed target crown, ventilated handguard, 3-position rubber buttpad, grey finish, cable lock and keys, 5-shot mag. **Price:** $775-995.

RUGER RIMFIRE AUTOLOADERS

Caliber: .22LR. **Barrel:** 16.12", 18.5", 20". **Weight:** 4.5-7.5 lbs. **Stocks:** Walnut, hardwood, brown laminate, synthetic. **Sights:** Gold bead or fiber optic front, rear folding or fiber optic, Weaver-type scope base adapter, none on Target. **Features:** Semi-auto, 6 configurations, blue or stainless in Carbine, Sporter, Compact Rifle and Target, Target models have hammer-forged, target-crowned heavy barrels and target triggers, steel receiver, Compact has shorter barrel, shorter and slim rifle-style stock and forend, cable lock and keys, 10-shot rotary mag. **Price:** $250-495.

SABRE DEFENCE XR15

Caliber: 5.56mm, 6.5 Grendel. **Barrel:** 16", 18", 20" 24". **Weight:** 7-12 lbs. **Stocks:** SOCOM 3-position adjustable, A2 or M4 6-position collapsible. **Sights:** Flip-up front and rear, forged front and Trijicon inserts (Massad), gas block w/ sight base (Heavy-Bench Target). **Features:** Semi auto, 8 models, single-stage (adjustable, Mil-Spec) or two-stage (Match available) trigger, Sabre A3 upper and matched upper CNC machined, Sabre Competition Gill-Brake, Massad has tapered mid-length handguards, ambi safety, detachable carry handle, two 30-shot mag. **Price:** $1279-3399.

SAVAGE MODEL 64

MAXSELL P99

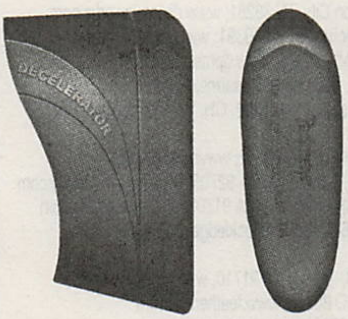
Maxsell offers the Walther P99 pistol simulator. Made to precise specs of the original, it's safe for hands-on training, and can be field stripped for maintenance instruction. The barrel is blocked and cannot be converted to live fire. Approved by the ATF and classified under US code as a non-gun. For more information contact: Maxsell Corp, 6601 Lyons Rd, Ste D1, Dept CH, Coconut Creek, FL 33073; 877-332-2343; www.maxsell.com

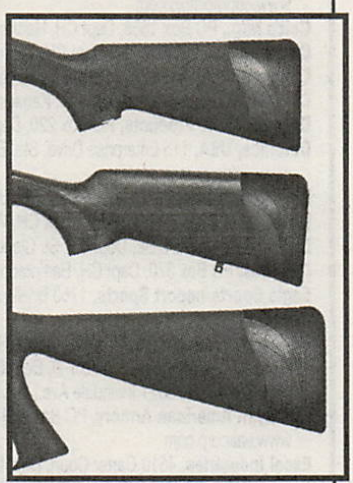
ARMALASER LASER

The first electronically touch-sensitive tactical laser system allows for an instant-on deployment of an extremely bright next generation laser. The system recognizes that a finger is near or on the trigger and instantly turns on the laser. The ArmaLaser tactical system is available for the Kel-Tec P32, P3AT and PF-9, Kahr polymer pistols and most GLOCKs. For more information contact: ArmaLaser Inc, 4699 N. Federal Hwy, Ste 110, Dept CH, Pompano Beach, FL 33064; 954-937-6054; www.armalaser.com

DECELERATOR SLIP-ON PAD

Lyman proudly announces their new Decelerator Slip-On Recoil Pad, which combines their Decelerator design with Speed-Mount insert. Available in three sizes and two colors. Don't miss out on these pads that can help you improve your accuracy and speed when shooting hard-hitting calibers. For more information contact: Lyman, 475 Smith St, Dept CH, Middletown, CT 06457; 800-225-9626; www.pachmayr.com

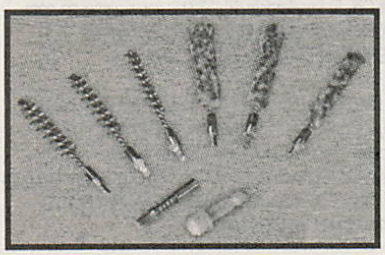




HIGH NOON HOLSTER

Skin Guard is a high ride, two-slot holster is ideal for concealed carry. Made of an extruded laminate skin with a vegetable tanned leather backing, this model features a skin guard, which prevents the slide, hammer and sight from wearer contact. It has double-stitched seams, 15-degree forward cant, covered triggerguard, open muzzle design and a tension screw for adjustment of the draw. For more information contact: High Noon Holsters, PO Box 1923, Dept CH, Tarpon Springs, FL 34688; 727-939-2701; www.highnoonholsters.com

GUNSLICK SNAP-LOCK KIT



Gunslick's new Snap-Lock accessory kit makes a great addition to any cleaning kit. This innovative cleaning tool allows you to attach and detach multiple mops and brushes quickly and easily. With this set you'll get the Snap-Lock adaptor that makes standard cleaning rods compatible, making brush, mop and jag changes a breeze. Clean all your guns quickly and easily with the Snap-Lock accessory tools. Get in touch with them at Onalaska Operations, N5549 County Trunk Z, Dept CH, Onalaska, WI 54650; 800-635-7656; www.gunslick.com

STRIKING POWER

AT AN AFFORDABLE PRICE

Finally, there is an affordable back-up weapon with striking knock-down power.

Introducing the Cobra Patriot 45 ACP. As the top-of-the-line leader in the Cobra family, the Patriot Series has many of the same features, but is priced well below the competition.

Available in your choice of .380, 9mm, or the most popular .45 ACP, the Patriot is the perfect fit with its ergonomic grip and black polymer frame. The true double action system offers vital second strike capability, and the non-slip trigger guard offers controllability even in the largest of hands.

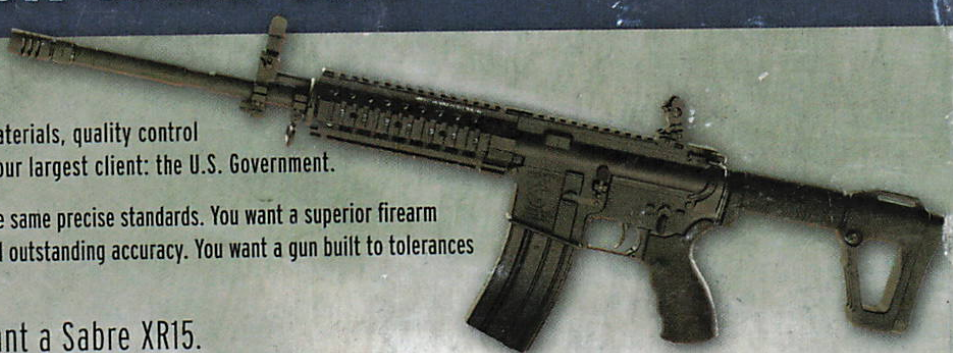
SABRE

Matt Taylor, Sabre engineer, active shooter, and one of over 100 employees dedicated to crafting the perfect weapon at Sabre Defence Industries.

SABRE DEFENCE INDUSTRIES

OUR PASSION: SUPERIOR WEAPONS



Sabre production utilizes the superior materials, quality control and precision engineering demanded by our largest client: the U.S. Government.

Every weapon we build is constructed to the same precise standards. You want a superior firearm with excellent handling characteristics and outstanding accuracy. You want a gun built to tolerances found nowhere else in the world.

You want perfection. You want a Sabre XR15.

Most of Sabre's rifles are available in both 5.56mm round or 6.5mm Grendel™ round.

Sabre Defence Industries is an ISO 9001:2000 registered company.
